First-hand Esri EAPA_2025 Test Vce Free: ArcGIS Pro Associate 2025 & Test EAPA_2025 Simulator Free

ITExamSimulator is a learning website which provides EAPA_2025 latest dumps and answers, and almost covers every knowledge of EAPA_2025 exam questions. Using our learning textbooks to prepare EAPA_2025 test is your best choice. ITExamSimulator with latest EAPA_2025 exam simulations will help you Pass EAPA_2025 Exam in a short time in a fast way. We promise that we will refund fully if the EAPA_2025 vce dumps and training materials have any problems or you fail the EAPA_2025 exam with our EAPA_2025 braindumps.

Esri ArcGIS Pro Associate 2025 Sample Questions (Q34-Q39):

NEW QUESTION # 34

A GIS technician has crop field data and is working with a dimension feature class. The technician wants to get measurements for all features from the same starting location.

Which editing tool should the technician use to complete the task?

- A. Continue dimensions
- B. Baseline aligned

- C. Simple aligned

Answer: B

Explanation:

The Baseline Aligned dimension tool is used when multiple measurements need to originate from a common baseline. This is exactly the case when measuring multiple crop fields from the same starting location, ensuring consistent and aligned measurements across features.

- * Simple Aligned creates individual dimension lines between two points but not aligned from a single baseline.
- * Continue Dimensions adds dimensions that continue from the endpoint of the previous dimension but is not intended for measurements from a common baseline.
- * Baseline Aligned properly anchors all measurements to the same origin point.

Therefore, the correct answer is B.

-

NEW QUESTION # 35

A land-use classified raster with nine different classes needs to be resampled from 10 x 10 m to 30 x 30 m cell size. The resample tool must be used, and the land classes must be preserved.

Which resampling technique should be used?

- A. Bilinear
- **B. Nearest**
- C. Cubic

Answer: B

Explanation:

For categorical (classified) rasters such as land-use data, Nearest Neighbor interpolation must be used during resampling. This technique preserves the original class values without introducing fractional or interpolated values.

* Cubic (Option A) and Bilinear (Option B) are interpolation methods suited for continuous data (elevation, temperature, etc.), but will distort categorical data.

Therefore, the correct answer is C.

-

NEW QUESTION # 36

An organization with many editors needs to know when features have been created and edited, as well as who edited the features. Where should the GIS administrator enable this capability?

- A. The Design options accessed by right-clicking the shapefile
- B. The Manage options accessed by right-clicking geodatabase
- **C. The Manage options accessed by right-clicking the feature dataset**

Answer: C

Explanation:

Editor tracking (which records who edited a feature and when) is enabled on individual feature classes or feature datasets in a geodatabase under the Manage menu. Shapefiles do not support editor tracking.

- * The geodatabase (Option A) controls higher-level administrative functions but not editor tracking.
- * Shapefiles (Option B) do not support editor tracking.
- * The feature dataset (Option C) allows enabling editor tracking for included feature classes.

Therefore, the correct answer is C.

-

NEW QUESTION # 37

A GIS analyst receives a dataset of precipitation change over the past five years, by country, for the entire world. The analyst is creating a map that will display this information. A requirement of the map is to preserve the area of each country.

Which projection should be used?

- A. Robinson
- **B. Equal Earth**
- C. Mercator

Answer: B

Explanation:

The Equal Earth projection is specifically designed to preserve area across the globe, making it ideal for thematic mapping of global datasets like precipitation change by country. It balances accurate area representation with a visually pleasing appearance for world maps.

* Mercator (Option A) preserves angles but distorts area, especially near the poles.

* Robinson (Option C) is visually pleasing for world maps but distorts both shape and area.

Therefore, the correct answer is B.

-

NEW QUESTION # 38

A GIS administrator receives reports from editors regarding schema locks on regularly updated enterprise data. Editors need to take turns editing, and project timelines are prolonged.

Which geodatabase capability will resolve this issue?

- A. Archiving
- B. Editor tracking
- **C. Versioning**

Answer: C

Explanation:

Versioning allows multiple editors to work simultaneously on the same dataset in an enterprise geodatabase without interfering with each other or encountering schema locks. Each editor works on a separate version, and changes can later be reconciled and posted.

* Archiving (Option A) tracks historical edits but does not address schema locks.

* Editor tracking (Option B) records who made changes and when, but does not resolve simultaneous editing conflicts.

Therefore, the correct answer is B.

NEW QUESTION # 39

.....

One of the biggest highlights of the EAPA_2025 exam materials is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of EAPA_2025 exam materials has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of EAPA_2025 Exam Materials is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere.
