## Certified Development Lifecycle and Deployment Architect SU22 questions and answers 100% passed 2024

Universal Containers has started building a customer Lightning community that contains a few dozen Aura components. The development team lead has come to the Salesforce architect about questions regarding testing the Lightning components. What two knowledge points can the architect pass to the development team lead? Choose 2 answers

- A. There is a \$T test helper object that can be used to create the instance of the Lightning component, and it is promise enabled.
- B. The testing of the JavaScript part of the Aura component can be tested in the Jest framework and the Apex controllers can be tested using test classes.
- C. Install the Lightning test service AppExchange package to enable the Aura component testing.
- D. The testing can be viewed in the lightning.force.com/c/jasminetests.app URL. The page loads and runs Jasmine test and writes pass/fail information to the screen. CORRECT ANSWER ANSWER: BC - CHECKED

What are three advantages of using the SFDX? Choose 3 answers

- A. Can store code on a local machine, or a version control system.
- B. Can use native Deployment Rollback Tool to quickly revert to prior state.
- C. Can quickly deploy metadata using Execute Anonymous
- D. Can install application metadata from a central repository E. Can create scratch orgs. CORRECT ANSWER ANSWER: ADE

Universal Containers (UC) Customer Community is scheduled to go live in the Europe, Middle East, and Africa (EMEA) region in 3 months. UC follows a typical centralized governance model. Two weeks ago, the project stakeholders informed the project team about the recent changes in mandatory compliance Requirements needed to go live. The project team analyzed the requirements and have estimated

The software is designed to help with Development-Lifecycle-and-Deployment-Architect exam dumps preparation.

### Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q221-Q226):

#### NEW QUESTION # 221

Universal Containers' org is complex but well-organized in unlocked packages with their dependencies. The development team was asked for a new feature, and the package that will be changed has already been identified. Which environment should be used for this development?

- A. A scratch org with the package code that will be changed and its dependencies
- B. A Developer Pro sandbox with all packages installed.
- C. A Developer Pro sandbox with the package code that will be changed and its dependencies installed.
- D. A scratch org with all installed packages.

**Answer: A**

Explanation:

The best environment for developing a new feature in an org with unlocked packages is a scratch org with the package code that will be changed and its dependencies. A scratch org is a source-driven and disposable deployment of Salesforce code and metadata that is fully configurable and can be created quickly. A scratch org can also install unlocked packages and their dependencies, which can help ensure compatibility and functionality of the new feature. A Developer Pro sandbox is not a good option, as it is not source-driven and can have outdated or conflicting data and metadata.

#### NEW QUESTION # 222

Universal Containers (UC) has been following the Waterfall methodology to deliver customer apps in Salesforce. As the business is growing at scale and with demand to incorporate features and functionality at faster pace, UC is finding the Waterfall approach is not an optimal process, and intends to transition towards an agile development methodology. Which are the two strengths of using an agile development methodology?

Choose 2

- A. There are many small releases of functional code, allowing stakeholders to see and touch the work in progress.
- B. All elements of the build are fully understood before work begins, reducing risk of unpleasant surprises.
- C. Careful documentation is done at each step of the process so a target body of knowledge is available for inspection.
- D. The project requirements in later phases are expected and accommodated by the process, by design.

**Answer: A,D**

Explanation:

Agile development methodology allows for frequent and incremental releases of functional code, which enables stakeholders to provide feedback and validate the requirements. Agile development methodology also embraces changes in the project requirements as the business needs evolve, and adapts to them accordingly.

#### NEW QUESTION # 223

UniversalContainers (UC) is using custom metadata types to control the behavior of a few of the custom functionalities. UC wants to Deploy custom metadata types to production using Metadata API.

Which two data types does UC need to include?

Choose 2 answers

- A. Custom Field
- B. CustomObject

- C. CustomMetadataType
- D. CustomMetadata

**Answer: A,D**

Explanation:

Explanation

To deploy custom metadata types to production using Metadata API, you need to include the CustomMetadata and CustomField data types. CustomMetadata represents the custom metadata type definition, and CustomField represents the custom metadata type fields. CustomMetadataType and CustomObject are not valid data types for custom metadata types

#### NEW QUESTION # 224

Universal Containers (UC) has been using Salesforce Sales Cloud for many years following a highly customized, single-org strategy with great success so far.

What two reasons can justify a change to a multi-org strategy?

Choose 2 answers

- A. UC wants to use Chatter for collaboration among different business units and stop working in silos.
- B. Acquired company that has its own Salesforce org and operates in a different business with its own set of regulatory requirements.
- C. UC is launching a new line of business with independent processes and adding any new feature to it is too complex.
- D. UC follows a unification enterprise architecture operating model by having orgs with the same processes implemented for each business unit.

**Answer: B,C**

#### NEW QUESTION # 225

Ursa Major Solar (UMS) has used Aura components significantly in its Salesforce application development. UMS has established a robust test framework and the development team follows the Salesforce recommended testing practices. UMS team uses Salesforce's test tool To check for common accessibility issues.

In which two environments the UMS team can call Aura accessibility tests?

Choose 2 answers

- A. WebDriver Test
- B. JSTEST
- C. ACCTEST
- D. AuraDriver Test

**Answer: A,B**

Explanation:

Aura accessibility tests can be called in JSTEST and WebDriver Test environments. JSTEST is a JavaScript testing framework that runs on Node.js and can be used to test Aura components. WebDriver Test is a Selenium-based testing framework that can be used to test the user interface and accessibility of Aura components. ACCTEST and AuraDriver Test are not valid environments for calling Aura accessibility tests.

#### NEW QUESTION # 226

.....

If you want to pass the Salesforce Development-Lifecycle-and-Deployment-Architect exam on the first attempt then we suggest you start this journey with Salesforce Development-Lifecycle-and-Deployment-Architect exam dumps.
