

# 2V0-17.25 Latest Guide Files - Pdf 2V0-17.25 Pass Leader

Issues		Troubleshooting Steps
Host in Isolation Response	Host in Isolation Response	Examine NIC teaming and load balancing configuration
Host in Failover State	Host in Failover State	Verify the port group settings and VLAN configuration
Host in Unreachable State	Host in Unreachable State	Check physical network cables and switch port status

### 6.DRAG DROP

Put the following steps in the correct order to update the driver/firmware in vSAN.

Verify that the new driver and firmware versions are active and the host is functioning correctly.	Step 1
Download the latest driver and firmware from the hardware vendor's website.	Step 2
Apply the firmware update to the host using the vendor's update tool.	Step 3
Plan for a maintenance window to perform the update.	Step 4
Check the current driver and firmware versions using the vSphere Client.	Step 5
Reboot the host to complete the update process.	Step 6
Update the driver using the vSphere Lifecycle Manager (vLCM)	Step 7

## Get the Right Q&A in VMware 2V0-17.25 Exam Questions

It is not hard to find that there are many different kinds of products in the education market now. It may be difficult for users to determine the best way to fit in the complex choices. We can tell you with confidence that the 2V0-17.25 practice materials are superior in all respects to similar products. First, users can have a free trial of 2V0-17.25 test prep, to help users better understand the 2V0-17.25 Study Guide. If the user discovers that the product is not appropriate for him, the user can choose another type of

learning material. Respect the user's choice, will not impose the user must purchase the 2V0-17.25 practice materials. We can meet all the requirements of the user as much as possible, to help users better pass the qualifying exams.

## VMware Cloud Foundation 9.0 Administrator Sample Questions (Q75-Q80):

### NEW QUESTION # 75

Which distributed switch feature can detect configurations that might cause a network mismatch, such as VLAN tagging errors or MTU inconsistencies?

- A. Network I/O Control (NIOC)
- B. Link Aggregation Control Protocol (LACP)
- C. Health Check
- D. Port Security

**Answer: C**

Explanation:

The Distributed Switch Health Check can identify VLAN, MTU, and teaming inconsistencies. NIOC manages traffic bandwidth, port security is a concept in physical networking, and LACP forms link- aggregated groups but doesn't check for VLAN or MTU mismatches.

### NEW QUESTION # 76

An organization is planning to manage a diverse set of databases across multiple VMware Cloud Foundation (VCF) environments using Data Services Manager.

Which three capabilities of Data Services Manager would help the organization managing these databases efficiently? (Choose three.)

- A. Automated database migration between on-premises and cloud environments
- B. Policy-based backup and recovery for databases
- C. Automated database provisioning and deployment
- D. Integration with vSAN for optimized storage management
- E. Centralized monitoring and alerting for all managed databases

**Answer: B,C,E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Data Services Manager provides several key capabilities that help organizations efficiently manage databases across VMware Cloud Foundation environments. The official documentation describes the following functions:

Centralized monitoring and alerting for all managed databases (A): Data Services Manager offers a single pane of glass for monitoring health, usage, and generating alerts for all databases under management.

Policy-based backup and recovery for databases (C): The platform allows administrators to define policies for backup and restore operations, ensuring data protection and compliance across all managed databases.

Automated database provisioning and deployment (E): Administrators can automate the deployment, scaling, and lifecycle management of databases, streamlining the operational process.

While Data Services Manager integrates with VMware storage and supports operational automation, it does not provide built-in, automated migration between on-premises and cloud environments, nor does it specifically require direct integration with vSAN for its optimized storage management features.

### NEW QUESTION # 77

An administrator is tasked to deploy a new vSAN Storage Cluster to an existing VCF instance.

The VCF instance is deployed as a single workload domain. What must the administrator do to achieve this without deploying additional management components?

- A. Deploy additional hosts as vSAN storage-only nodes within the existing cluster.
- B. Deploy a second cluster as a vSAN storage cluster in the existing workload domain.
- C. Deploy an additional workload domain with a vSAN storage cluster within the existing VCF instance.
- D. Deploy an additional VCF instance and workload domain with a vSAN storage cluster.

**Answer: B**

Explanation:

The VCF 9.0 Architecture and Deployment Guide explains that within a single Workload Domain, administrators can scale resources by adding additional clusters, including compute or vSAN storage clusters. Specifically, "A Workload Domain can contain multiple clusters. You can deploy a new cluster, such as a vSAN cluster, into an existing domain without introducing new management components."

#### NEW QUESTION # 78

Which two are use cases for VMware Cloud Foundation (VCF) Automation? (Choose two.)

- A. Deploy VMware Private AI Foundation with NVIDIA Workloads.
- **B. Provide application dependency mapping.**
- **C. Provide a Self-Service Catalog.**
- D. Implement alerting based on resource utilization.
- E. Implement VMware Cloud Foundation Virtual Private Cloud (VPC).

**Answer: B,C**

Explanation:

Self-Service Catalog - VCF Automation Service Broker provides a catalog for developers and operators to request services and blueprints.

Application Dependency Mapping - achieved through integration with VCF Operations for Networks.

Developers can discover application relationships and map dependencies through automated workflows in VCF Automation.

#### NEW QUESTION # 79

Which three tasks must an administrator complete to enable Audit Events in VCF Operations? (Choose three.)

- A. Enable Audit Events in VCF Operations.
- B. Enable Audit Events in VCF Operations for Logs.
- **C. Configure VCF Operations for Logs Integration in VCF Operations.**
- **D. Configure vCenter server instances in VCF Operations for Logs.**
- E. Configure VCF Operations Content Pack in VCF Operations for Logs.
- **F. Install VCF Operations for Logs.**

**Answer: C,D,F**

Explanation:

To enable the visibility of audit events within the VCF Operations interface, the environment must satisfy specific deployment and configuration prerequisites. Without these steps, audit event information will not be populated.

According to the documentation:

\* Install VCF Operations for Logs (E): If you have not configured VCF Operations, you will not see any information related to audit events. Therefore, you must install VCF Operations for Logs first.

\* Configure vCenter Server instances in VCF Operations for Logs (D): You must register the vCenter Server instances in VCF Operations for Logs to ensure the management components are sending the necessary log data to the ingestion engine.

\* Configure VCF Operations for Logs Integration in VCF Operations (F): After you install VCF Operations for Logs, you must configure the VCF Operations for Logs management pack from the Administration > Integrations page in VCF Operations. This includes configuring the VCF Operations for Logs instances which forward logs to the specific VCF Operations for Logs instance that is integrated with VCF Operations.
