## Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q38-Q43):

### NEW QUESTION # 38

Refer to the exhibit, which shows the output of a policy route table entry.

```
id=2113929223 static_route=7 dscp_tag=0x00 flags=0x00 tos=0x00 tos_mask=0x00 protocol=0 sp=0-0 iif=0 dport=1-65535 path(1) oif=3(port1) gwy=192.2.0.2
source wildcard(1): 0.0.0.0/0.0.0.0
destination wildcard(1): 0.0.0.0/0.0.0.0
internet service(1): Fortinet-FortiGuard(1245324,0,0,0)
hit_count=0 last_used=2022-02-23 06:39:07
```

Which type of policy route does the output show?

- A. An SD-WAN rule
- B. A regular policy route, which is associated with an active static route in the FIB
- C. A regular policy route
- D. An ISDB route

Answer: D

### NEW QUESTION # 39

Consider the scenario where the server name indication (SNI) does not match either the common name (CN) or any of the subject alternative names (SAN) in the server certificate. Which action will FortiGate take when using the default settings for SSL certificate inspection?

- A. FortiGate uses the SNI from the user's web browser.
- **B. FortiGate uses the CN information from the Subject field in the server certificate.**
- C. FortiGate closes the connection because this represents an invalid SSL/TLS configuration.
- D. FortiGate uses the first entry listed in the SAN field in the server certificate.

**Answer: B**

Explanation:

```
#Config firewall ssl-ssh-profile
```

```
edit <profile_name>
```

```
config https
```

```
set sni-server-cert-check [enable* | strict | disable]
```

Enable: If the SNI does NOT match the CN or SAN fields in the returned server's certificate, FG uses the CN field instead of the SNI to obtain the FQDN.

Strict: If the SNI does NOT match the CN or SAN fields in the returned server's certificate, FG closes the connection.

Disable: FG does not check the SNI.

### NEW QUESTION # 40

Refer to the exhibit, which shows the output of diagnose sys session list.

```

If the HA ID for the primary device is 0, what happens if the primary fails and the secondary becomes the primary?

- **A. Traffic for this session continues to be permitted on the new primary device after failover, without requiring the client to restart the session with the server.**
- B. The session state is preserved but the kernel will need to re-evaluate the session because NAT was applied.
- C. The secondary device has this session synchronized; however, because application control is applied, the session is marked dirty and has to be re-evaluated after failover.
- D. The session will be removed from the session table of the secondary device because of the presence of allowed error packets, which will force the client to restart the session with the server.

**Answer: A**

Refer to the exhibits, which show the configuration on FortiGate and partial internet session information from a user on the internal network.

An administrator would like to test session failover between the two service provider connections.

Which two changes must the administrator make to force this existing session to immediately start using the other interface? (Choose two.)

- A. Configure set snat-route-change enable.
- B. Change the priority of the port1 static route to 11.
- C. Change the priority of the port2 static route to 5.
- D. Configure unset snat-route-change to return it to the default setting.

Answer: A,B

## NEW QUESTION # 42

Refer to the exhibit, which shows the output of a debug command.

```

FGT # get router info ospf interface port4
port4 is up, line protocol is up
Internet Address 172.20.121.236/24, Area 0.0.0.0, MTU 1500

Crypt Sequence Number is 411
Hello received 106 sent 27, DD received 6 sent 3
LS-Req received 2 sent 2, LS-Upd received 7 sent 17
LS-Ack received 4 sent 3, Discarded 1

```

What needs to happen for the local router to be elected DR?

- A. Both the DR and BDR will have to fail before the local router will be elected DR.
- B. The local router will be elected DR only if re-election occurs and its router ID is highest, assuming equal priority.
- C. The local router will be elected DR if the current DR fails because it has a higher router ID than the BDR.
- D. The local router will never be elected DR.

**Answer: A**

Explanation:

On a broadcast network the BDR automatically takes over if the DR dies; only when there is no BDR (or it fails as well) will a new full DR election occur, at which point this router - having the highest router ID among the remaining routers - would win.
