## Adobe Commerce Developer Expert 認定 AD0-E725 試験問題 (Q46-Q51):

### 質問 # 46

A Developer is tasked with creating a new index. The custom indexer is not automatically updating the product data. How should the Developer solve this issue?

- A. Use an event observer to monitor data changes.
- **B. Use the `mview` to allow tracking database changes.**
- C. Implement custom database triggers.

正解: B

### 質問 # 47

A client recently started using the new Adobe Live Search functionality. They report an issue with content from the website, such as CMS blocks, not returning with the search result.

A Developer is asked to investigate because the client wants this content to be part of the data pool of Live Search. How should the Developer respond to the client?

- A. Advise the client to enable content for Live Search from the admin panel.
- **B. Share documentation regarding the limitations of Live Search.**
- C. Extend the class `Magento\LiveSearchAdapter\Model\Attribute\Metadata`.

正解: B

解説:

Adobe Live Search is designed to handle catalog product data only. It does not index or return CMS content such as blocks or pages. This is a known limitation of Live Search.

B is invalid because there is no admin setting to enable CMS content in Live Search.

C is not a supported solution; extending Live Search classes will not include CMS content.

Adobe Commerce DevDocs - Live Search limitations

### 質問 # 48

A Developer working on an Adobe Commerce Cloud project encounters an issue with the database service that requires investigation. To troubleshoot the issue, the Developer decides to securely access the cloud services from the local machine to directly interact with the services and run diagnostic commands.

Which command step is required to achieve this?

- **A. Use the `magento-cloud tunnel:open` command to access the cloud services.**
- B. Use the `magento-cloud service:connect` command to access the cloud services.
- C. Use the `php bin/magento cloud:tunnel:connect` command to access the cloud services.

正解: A

### 質問 # 49

A Developer needs to set up a message queue topic in Adobe Commerce to asynchronously handle order processing. Which XML file should the Developer use to configure this?

- A. `communication.xml`
- B. `queue_consumer.xml`

- C. queue\_topology.xml

正解: C

#### 質問 # 50

A client requests changes to their Pro Staging and Production environments. They supply a Developer with different domains for new websites to be created with the goal of expanding operations to multiple countries, doubling the current number of SKUs, and adding more customer groups.

Which two issues should the Developer anticipate based on the requested changes? (Choose two.)

- A. Additional stores can lead to a longer indexing process and slower response times for noncached catalog pages.
- B. Multiple websites may require duplicating custom functionality for each store, which increases code redundancy.
- C. Catalog data expands as the number of websites and stores are increased.
- D. Recreate hierarchy navigation for every new website.

正解: A、C

解説:

When new websites and stores are added in Adobe Commerce:

The catalog data expands because product, price, inventory, and configuration data must be stored per website /store (B).

Indexing becomes more complex as indexers must recalculate data per website/store, which can increase indexing times and slow down noncached catalog pages (C).

A is incorrect because navigation hierarchy is managed via categories, not recreated per website automatically.

D is incorrect because Magento code is shared across stores; functionality is not duplicated per store.
