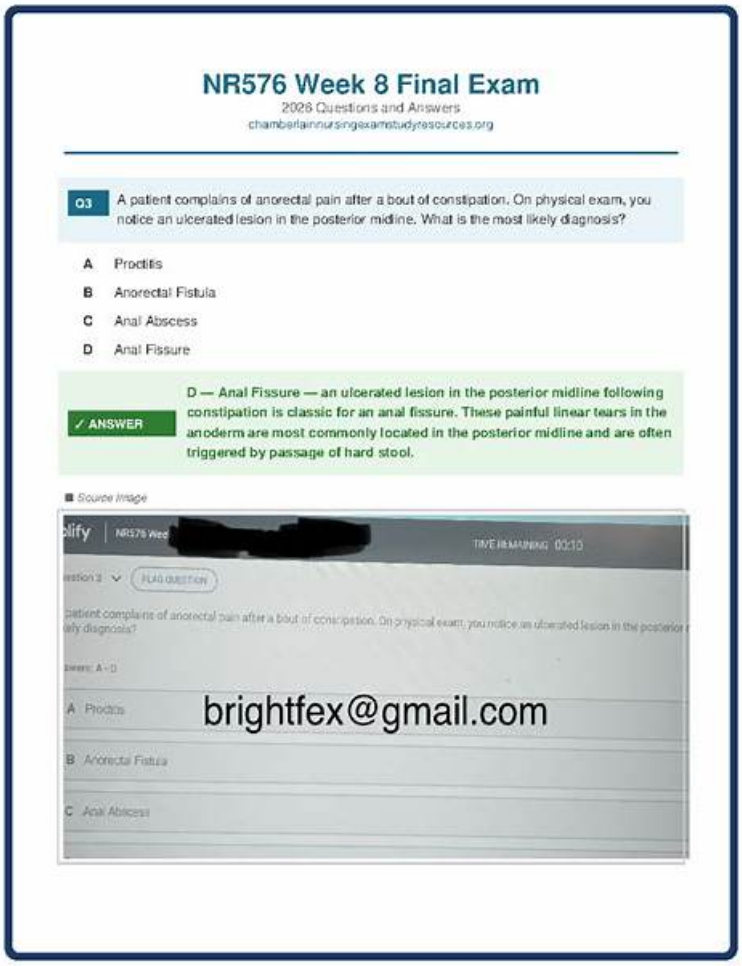
Reliable NSE5_FNC_AD-7.6 Exam Braindumps | NSE5_FNC_AD-7.6 Guaranteed Passing



P.S. Free 2026 Fortinet NSE5_FNC_AD-7.6 dumps are available on Google Drive shared by CramPDF: https://drive.google.com/open?id=1Evd4I6yKtvsSo04fAj7k171E0AitFhSV

The immediate downloading feature of our NSE5_FNC_AD-7.6 certification guide is an eminent advantage of our products. Once the pay is done, our customers will receive an e-mail from our company. Our NSE5_FNC_AD-7.6 exam study materials are available for downloading without any other disturbing requirements as long as you have paid successfully, which is increasingly important to an examinee as he or she has limited time for personal study for the NSE5_FNC_AD-7.6 Exam. Therefore, our Fortinet NSE 5 - FortiNAC-F 7.6 Administrator guide torrent is attributive to high-efficient learning as you will pass the NSE5_FNC_AD-7.6 exam only after study for 20 to 30 hours.

Our NSE5_FNC_AD-7.6 test questions are compiled by domestic first-rate experts and senior lecturer and the contents of them contain all the important information about the test and all the possible answers of the questions which maybe appear in the test. You can use the practice test software to check your learning outcomes. Our NSE5_FNC_AD-7.6 test practice guide' self-learning and self-evaluation functions, the statistics report function, the timing function and the function of stimulating the test could assist you to find your weak links, check your level, adjust the speed and have a warming up for the real exam. You will feel your choice to buy NSE5_FNC_AD-7.6 Exam Dump is too right.

>> Reliable NSE5_FNC_AD-7.6 Exam Braindumps <<

Free PDF The Best Fortinet - Reliable NSE5_FNC_AD-7.6 Exam Braindumps

Fortinet NSE5_FNC_AD-7.6 Practice Material is from our company which made these NSE5_FNC_AD-7.6 practice materials with accountability. And NSE5_FNC_AD-7.6 Training Materials are efficient products. What is more, Fortinet NSE5_FNC_AD-7.6 Exam Prep is appropriate and respectable practice material.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45
When creating a device profiling rule, what is an advantage of modeling the endpoint as a device in the inventory view?

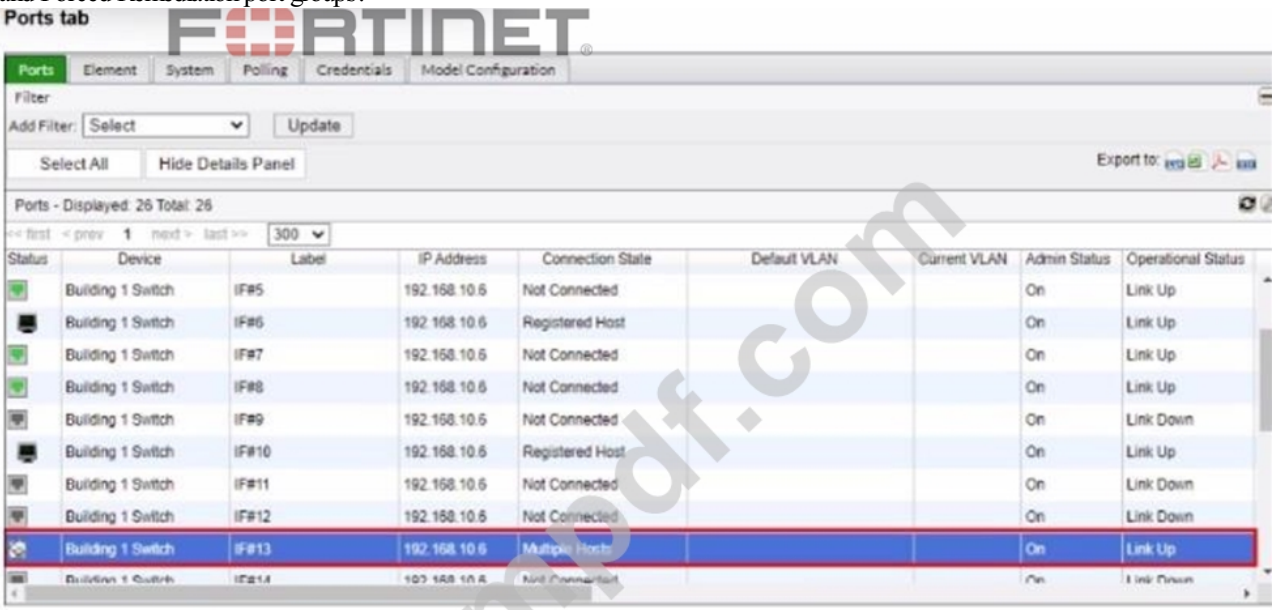
- A. The devices will have connection logs.
- B. The devices can be associated with a logged on user.
- C. The device will have historic connection logs
- D. The devices can have scheduled connection status polling.

Answer: C

Explanation:
Modeling the endpoint as a device in the inventory allows FortiNAC-F to retain historical connection data for that device, providing visibility into past connectivity events and behavior over time.

NEW QUESTION # 46
Refer to the exhibits. What would happen if the highlighted port with connected hosts was placed in both the Forced Registration and Forced Remediation port groups?

Ports tab



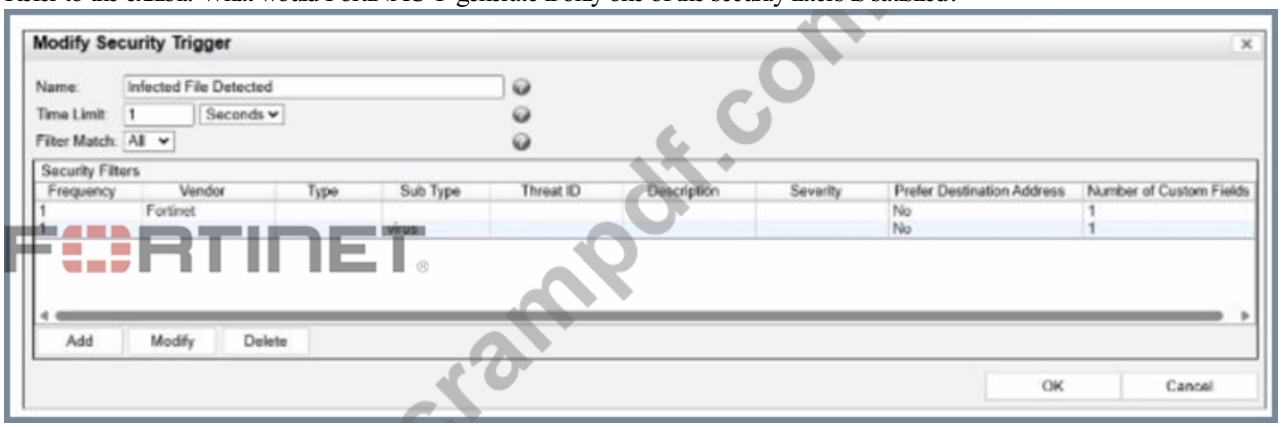
Adapters tab

- A. Only the higher ranked enforcement group would be applied.
- B. Both types of enforcement would be applied
- C. Enforcement would be applied only to rogue hosts
- D. Multiple enforcement groups could not contain the same port.

Answer: A

Explanation:
In FortiNAC-F, Port Groups are used to apply specific enforcement behaviors to switch ports.
When a port is assigned to an enforcement group, such as Forced Registration or Forced Remediation, FortiNAC-F overrides normal policy logic to force all connected adapters into that specific state. The exhibit shows a port (IF#13) with "Multiple Hosts" connected, which is a common scenario in environments using unmanaged switches or hubs downstream from a managed switch port.
According to the FortiNAC-F Administrator Guide, it is possible for a single port to be a member of multiple port groups. However, when those groups have conflicting enforcement actions--such as one group forcing a registration state and another forcing a remediation state--FortiNAC-F utilizes a ranking system to resolve the conflict. In the FortiNAC-F GUI under Network > Port Management > Port Groups, each group is assigned a rank. The system evaluates these ranks, and only the higher ranked enforcement group is applied to the port. If a port is in both a Forced Registration group and a Forced Remediation group, the group with the numerical priority (rank) will dictate the VLAN and access level assigned to all hosts on that port.
This mechanism ensures consistent behavior across the fabric. If the ranking determines that
"Forced Registration" is higher priority, then even a known host that is failing a compliance scan (which would normally trigger Remediation) will be held in the Registration VLAN because the port-level enforcement takes precedence based on its rank.
"A port can be a member of multiple groups. If more than one group has an enforcement assigned, the group with the highest rank (lowest numerical value) is used to determine the enforcement for the port. When a port is placed in a group with an enforcement, that enforcement is applied to all hosts connected to that port, regardless of the host's current state."

NEW QUESTION # 47
Refer to the exhibit. What would FortiNAC-F generate if only one of the security fitters is satisfied?



- A. A normal alarm
- B. A normal event
- C. A security alarm
- D. A security event

Answer: B

Explanation:
In FortiNAC-F, Security Triggers are used to identify specific security-related activities based on incoming data such as Syslog messages or SNMP traps from external security devices (like a FortiGate or an IDS). These triggers act as a filtering mechanism to determine if an incoming notification should be escalated from a standard system event to a Security Event.
According to the FortiNAC-F Administrator Guide and relevant training materials for versions 7.2 and 7.4, the Filter Match setting is the critical logic gate for this process. As seen in the exhibit, the "Filter Match" configuration is set to "All". This means that for the Security Trigger named
"Infected File Detected" to "fire" and generate a Security Event or a subsequent Security Alarm, every single filter listed in the Security Filters table must be satisfied simultaneously by the incoming data.
In the provided exhibit, there are two filters: one looking for the Vendor "Fortinet" and another looking for the Sub Type "virus". If only one of these filters is satisfied (for example, a message from Fortinet that does not contain the "virus" subtype), the logic for the Security Trigger is not met. Consequently, FortiNAC-F does not escalate the notification. Instead, it processes the incoming data as a Normal Event, which is recorded in the Event Log but does not trigger the automated security response workflows associated with security alarms.
"The Filter Match option defines the logic used when multiple filters are defined. If 'All' is selected, then all filter criteria must be met in order for the trigger to fire and a Security Event to be generated. If the criteria are not met, the incoming data is processed as a

normal event. If 'Any' is selected, the trigger fires if at least one of the filters matches."

NEW QUESTION # 48
An administrator wants to control user access to corporate resources by integrating FortiNAC-F with FortiGate using firewall tags defined on FortiNAC-F.
Where would the administrator assign the firewall tag value that will be sent to FortiGate?

- A. Security rule
- B. Device profiling rule
- C. Logical network
- D. RADIUS group attribute

Answer: C

Explanation:
In FortiNAC-F, the integration with FortiGate for Security Fabric and Single Sign-On (FSSO) allows the system to communicate the access level of an endpoint directly to the firewall using firewall tags. This eliminates the need for complex VLAN steering in some environments by allowing the FortiGate to apply policies based on these dynamic tags instead of just a physical or virtual network segment.
The actual assignment of the firewall tag value occurs within a Logical Network. In the FortiNAC- F architectural model, a Logical Network acts as a container for "Access Values". When an administrator configures a Logical Network (located under Network > Logical Networks), they define what that network represents--such as "Corporate Access" or "Contractor Limited". Within that definition, they assign the specific Firewall Tag that matches the tag created on the FortiGate. Once a user or host matches a Network Access Policy, FortiNAC-F identifies the associated Logical Network and pushes the defined tag to the FortiGate via the FSSO connector.
It is important to note that while Network Access Policies (and by extension Security Rules) are the logic engines that trigger the assignment, they do not hold the tag value itself. They simply point to a Logical Network, which serves as the central repository for that specific access configuration.
"To assign firewall tags, navigate to Network > Logical Networks. Select the desired logical network and click Edit. Under the Access Value section, select Firewall Tag as the type and enter the tag name exactly as it appears on the FortiGate. When a Network Access Policy matches a host, FortiNAC sends this tag to the FortiGate as an FSSO message."

NEW QUESTION # 49
Which two actions must the administrator perform to allow FortiNAC-F to process incoming syslog messages from an unknown vendor? (Choose two.)

- A. The device must be added as a server in the Host view
- B. The device must be added as a log receiver in FortiNAC-F.
- C. The device sending the messages must be modeled in the Network Inventory view
- D. The device must have an event parser created for it.

Answer: C,D

Explanation:
An event parser must be created so FortiNAC-F can interpret and extract meaningful data from the unknown vendor's syslog messages. The sending device must be modeled in the Network Inventory so FortiNAC-F can associate the incoming syslog messages with a known device and properly process the generated events.

NEW QUESTION # 50
