CompTIA SecAI+ Certification Exam Sample Questions (Q92-Q97):

NEW QUESTION # 92

An employee wants a consulting company to procure a data set that contains age, ethnicity, and diabetes status. During development, the employer wants to ensure the integrity of the data.

Which of the following is the best strategy to accomplish this task?

- A. Conducting human evaluation
- B. Querying the model
- C. Implementing checksums
- D. Enabling log monitoring

Answer: C

Explanation:

Checksums ensure data integrity by detecting any unauthorized or accidental changes to the dataset. This provides a reliable way to

confirm that sensitive attributes such as age, ethnicity, and diabetes status remain unaltered during development.

NEW QUESTION # 93

A recently deployed AI system becomes persistently unavailable. A restart temporarily fixes the issue, but the issue happens again. Upon examination of application programming interface (API) logs, an analyst finds that external calls continued to use system resources after the action completed.

Which of the following is the best way to improve availability of the system?

- A. Enforcing session expiration
- B. Creating token limits
- C. Increasing system memory
- D. Implementing multifactor authentication (MFA)

Answer: A

Explanation:

The persistent unavailability is caused by external calls consuming resources even after completion, indicating sessions are not being closed. Enforcing session expiration ensures unused sessions are terminated, freeing resources and improving system availability.

NEW QUESTION # 94

A penetration tester is assessing the controls of a deployed AI system that is designed to search and return the contents of files. The tester runs the following:

□ Which of the following is the best control to prevent abuse of the system?

- A. Reducing the privilege scope of the service account
- B. Adding a large language model (LLM) guardrails library to the application code
- C. Segmenting the workload into a separate virtual private cloud (VPC)
- D. Implementing custom detection rules for anomalous model behavior

Answer: A

Explanation:

The penetration test shows that the system accepts arbitrary commands like deleteBuckets or listPermissions, which could lead to privilege abuse. The most effective control is least privilege, ensuring the service account only has access to what is strictly necessary (e.g., reading files) and not sensitive operations like deleting buckets or altering permissions.

NEW QUESTION # 95

An AI security administrator notices that the information referenced by the model is incorrectly formatted and missing values. Which of the following job roles would most likely be responsible for correcting this error?

- A. Data engineer
- B. Platform engineer
- C. AI architect
- D. Machine learning operations (MLOps) engineer

Answer: A

Explanation:

A data engineer is responsible for preparing, cleaning, and formatting data pipelines. When information is incorrectly formatted or missing values, the data engineer ensures data integrity and quality before it is used by AI models.

NEW QUESTION # 96

An AI security team must assess the probability of an attack on its new system and the impact associated with such an attack. Which of the following threat-modeling resources best addresses the threat landscape for machine learning (ML)?

- A. MITRE Adversarial Threat Landscape for AI Systems (ATLAS)

- B. Common Vulnerabilities and Exposures (CVE) AI working group
- C. Massachusetts Institute of Technology (MIT) risk repository
- D. Open Worldwide Application Security Project (OWASP)

Answer: A

Explanation:

MITRE ATLAS is specifically designed to capture adversarial tactics, techniques, and procedures (TTPs) targeting machine learning systems. It helps organizations assess both the probability and impact of AI/ML-related attacks, making it the most relevant threat-modeling resource.
