ACP-120 Pass Guide, ACP-120 Valid Test Simulator

ValidExam is a real dumps provider that ensure you pass the different kind of IT exam with offering you exam dumps and learning materials. You just need to use your spare time to practice the ACP-120 Real Dumps and remember ACP-120 test answers skillfully, you will clear ATLASSIAN practice exam at your first attempt.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41

You are adding a user to Jira software using the invite users method in user management Which setting on the page guarantees the user access to Jira software (Choose one)

- A. Email address
- **B. Product access**
- C. Group membership
- D. Email domains

Answer: B

NEW QUESTION # 42

You have planned, tested, and performed a Jira upgrade.

The upgrade appeared to be a success; however, after several hours of use, your users are reporting significant problems and you decide to roll back.

Which two effects do you expect to see after the rollback? (Choose two.)

- A. Jira will go back to the same schemes as before the upgrade.
- B. New issues entered between upgrade and rollback will be lost.
- C. Jira will need to be reconnected to other systems it was integrated with.
- D. Emails will automatically be sent out to tell people about the rollback.
- E. The color scheme will be set back to default to indicate there was a rollback.

Answer: A,C

NEW QUESTION # 43

Your marketing group is using Jira to track media print advertisements. They would like to track TV and radio commercials as well. The same team handles all three formats, but each format requires a unique workflow. The team would like to keep everything on the same dashboard, and they will also be using the same permissions, notifications and screens. Without using third-party apps, how should you configure Jira to meet these requirements?

- A. Use issue types of Print, Radio and TV in the existing project.
- B. Clone the existing project and key for TV and Radio.
- C. Create two new projects for TV and Radio.
- D. Add TV and Radio into the existing project as components.
- E. Copy the existing permissions and notification schemes, and associate them with new projects for TV and Radio.
- F. Create a sub-component hierarchy.

Answer: C

NEW QUESTION # 44

Some of your project owners would like to make their projects publicly accessible over the Internet. These projects will not require login.

You could support this by allowing read-only anonymous access to the projects.

Which two additional factors should you take into consideration when setting this up? (Choose two.)

- A. Internet search engines could index data.
- B. Licensed users might accidentally comment anonymously rather than logging in first.
- C. Spam bots could add comments.
- D. Anonymous users could export all issues from Jira.
- E. Anonymous users could find a full list of all your projects.
- F. Anonymous users could see other users' names.

Answer: A,D

NEW QUESTION # 45

You need to grant members of the Compliance team access to all of your company-managed projects in Jira.

All the projects were created with a shared configuration and need to remain that way. You must decide if a project role is required to accommodate any of their requirements. Identify the requirement that necessitates the use of a project role.

- A. Only some Compliance users need to create shared dashboards.
- B. Only two Compliance users should be able to see secured issues.
- C. Only some Compliance users can delete issues and they differ in each project.
- D. All members need to be able to move issues.

Answer: C

Explanation:

Since all company-managed projects share a single configuration (including permission schemes), permissions are applied uniformly across projects. A project role is necessary when a requirement involves project-specific differences in user permissions, as roles allow membership to vary by project. The requirement that only some Compliance users can delete issues and they differ in each project (Option A) necessitates a project role, as it requires project-specific user assignments for the Delete Issues permission.

* Explanation of the Correct Answer (Option A):

* The requirement states that only some Compliance users can delete issues, and the specific users differ in each project. In a shared permission scheme, permissions like Delete Issues are granted to users, groups, or project roles. Using a group would apply the same

users across all projects, which does not allow for different users per project. A project role (e.g., "Compliance Deleters") can be added to the Delete Issues permission in the shared permission scheme, and different Compliance users can be added to this role in each project's Project settings > People, accommodating the project-specific variation.

* Exact Extract from Documentation:

Manage project roles

Project roles allow permissions to be granted to different users in each project, even with a shared permission scheme.

To configure:

* Create a new project role in Settings > System > Project roles (e.g., "Compliance Deleters").

* Add the role to a permission (e.g., Delete Issues) in the permission scheme (Settings > Issues > Permission schemes).

* Add users to the role in each project's Project settings > People. Example: Grant Delete Issues to the "Compliance Deleters" role, then assign different users to the role in each project. Note: Project roles are ideal for permissions that vary by project while maintaining a shared scheme. (Source: Atlassian Support Documentation, "Manage project roles")

* Why This Fits: A project role allows different Compliance users to have the Delete Issues permission in each project, satisfying the requirement for project-specific variation while keeping the shared configuration, making Option A the correct answer.

* Why Other Options Are Incorrect:

* All members need to be able to move issues (Option B):

* The Move Issues permission can be granted to all Compliance users via a group (e.g.,

"Compliance Team") in the shared permission scheme. Since the requirement applies uniformly to all members across all projects, a project role is not necessary, as there is no project-specific variation.

* Extract from Documentation:

Permissions like Move Issues can be granted to a group in a shared permission scheme, applying to all projects without needing project-specific roles.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Only two Compliance users should be able to see secured issues (Option C):

* Secured issues are managed by an issue security scheme, where security levels define who can view issues (e.g., specific users, groups, or roles). To allow only two Compliance users to see secured issues, you can create a security level listing those two users explicitly or a group containing only them. This does not require a project role, as the same two users apply across all projects, and security levels are part of the shared configuration.

* Extract from Documentation:

Issue security levels can specify individual users or groups to restrict visibility. Project roles are not required unless visibility varies by project.

(Source: Atlassian Support Documentation, "Configure issue security schemes")

* Only some Compliance users need to create shared dashboards (Option D):

* Creating shared dashboards requires the Share dashboards and filters global permission, not a project-level permission. This can be granted to a group containing the relevant Compliance users in Settings > System > Global permissions. Since this is a global permission, it does not vary by project and does not require a project role.

* Extract from Documentation:

The Share dashboards and filters global permission allows users to share dashboards. It is granted globally, not via project roles.

(Source: Atlassian Support Documentation, "Manage global permissions")

* Additional Notes:

* Steps to configure Option A:

* Create a "Compliance Deleters" project role in Settings > System > Project roles.

* Add the role to the Delete Issues permission in the shared permission scheme (Settings > Issues > Permission schemes).

* For each project, add the appropriate Compliance users to the "Compliance Deleters" role in Project settings > People.

* This configuration requires Jira administrator privileges to create the role and modify the permission scheme, but project admins can manage role membership.

* The shared configuration (permission scheme, etc.) is preserved, as the project role integrates seamlessly.
