There has been fierce and intensified competition going on in the practice materials market. As the leading commodity of the exam, our PSE-Strata-Pro-24 training materials have get pressing requirements and steady demand from exam candidates all the time. So our PSE-Strata-Pro-24 Exam Questions have active demands than others with high passing rate of 98 to 100 percent. Don't doubt the pass rate, as long as you try our PSE-Strata-Pro-24 study questions, then you will find that pass the exam is as easy as pie.

Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

Topic	Details
Topic 1	• Architecture and Planning: This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.

Topic 2	• Deployment and Evaluation: This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.
Topic 3	• Business Value and Competitive Differentiators: This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.
Topic 4	• Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.

Dumps PSE-Strata-Pro-24 Questions - Top PSE-Strata-Pro-24 Exam Dumps

In order to make the exam easier for every candidate, FreeCram compiled such a study materials that allows making you test and review history performance, and then you can find your obstacles and overcome them. In addition, once you have used this type of PSE-Strata-Pro-24 Exam Question online for one time, next time you can practice in an offline environment. It must be highest efficiently PSE-Strata-Pro-24 exam tool to help you pass the exam.

Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q40-Q45):

NEW QUESTION # 40
An existing customer wants to expand their online business into physical stores for the first time. The customer requires NGFWs at the physical store to handle SD-WAN, security, and data protection needs, while also mandating a vendor-validated deployment method. Which two steps are valid actions for a systems engineer to take? (Choose two.)

- A. Use Golden Images and Day 1 configuration to create a consistent baseline from which the customer can efficiently work.
- B. Create a bespoke deployment plan with the customer that reviews their cloud architecture, store footprint, and security requirements.
- C. Recommend the customer purchase Palo Alto Networks or partner-provided professional services to meet the stated requirements.
- D. Use the reference architecture "On-Premises Network Security for the Branch Deployment Guide" to achieve a desired architecture.

Answer: B,C

Explanation:
When assisting a customer in deploying next-generation firewalls (NGFWs) for their new physical store branches, it is crucial to address their requirements for SD-WAN, security, and data protection with a validated deployment methodology. Palo Alto Networks provides robust solutions for branch security and SD-WAN integration, and several steps align with vendor-validated methods:
* Option A (Correct):Palo Alto Networks or certified partners provideprofessional servicesfor validated deployment methods, including SD-WAN, security, and data protection in branch locations.
Professional services ensure that the deployment adheres to industry best practices and Palo Alto's validated reference architectures. This ensures a scalable and secure deployment across all branch locations.
* Option B:While usingGolden Imagesand a Day 1 configuration can create a consistent baseline for configuration deployment, it does not align directly with the requirement of following vendor-validated deployment methodologies. This step is helpful but secondary to vendor-validated professional services and bespoke deployment planning.

* Option C (Correct):Abespoke deployment planconsiders the customer's specific architecture, store footprint, and unique security requirements. Palo Alto Networks' system engineers typically collaborate with the customer to design and validate tailored deployments, ensuring alignment with the customer's operational goals while maintaining compliance with validated architectures.
* Option D:While Palo Alto Networks provides branch deployment guides (such as the "On-Premises Network Security for the Branch Deployment Guide"), these guides are primarily reference materials.
They do not substitute for vendor-provided professional services or the creation of tailored deployment plans with the customer.

NEW QUESTION # 41
As a team plans for a meeting with a new customer in one week, the account manager prepares to pitch Zero Trust. The notes provided to the systems engineer (SE) in preparation for the meeting read:
"Customer is struggling with security as they move to cloud apps and remote users." What should the SE recommend to the team in preparation for the meeting?

* A. Lead with the account manager pitching Zero Trust with the aim of convincing the customer that the team's approach meets their needs.
* B. Design discovery questions to validate customer challenges with identity, devices, data, and access for applications and remote users.
* C. Lead with a product demonstration of GlobalProtect connecting to an NGFW and Prisma Access, and have SaaS security enabled.
* D. Guide the account manager into recommending Prisma SASE at the customer meeting to solve the issues raised.

Answer: B

Explanation:
When preparing for a customer meeting, it's important to understand their specific challenges and align solutions accordingly. The notes suggest that the customer is facing difficulties securing their cloud apps and remote users, which are core areas addressed by Palo Alto Networks' Zero Trust and SASE solutions.
However, jumping directly into a pitch or product demonstration without validating the customer's specific challenges may fail to build trust or fully address their needs.
* Option A:Leading with a pre-structured pitch about Zero Trust principles may not resonate with the customer if their challenges are not fully understood first. The team needs to gather insights into the customer's security pain points before presenting a solution.
* Option B (Correct):Discovery questionsare a critical step in the sales process, especially when addressing complex topics like Zero Trust. By designing targeted questions about the customer's challenges with identity, devices, data, and access, the SE can identify specific pain points. These insights can then be used to tailor a Zero Trust strategy that directly addresses the customer's concerns.
This approach ensures the meeting is customer-focused and demonstrates that the SE understands their unique needs.
* Option C:While a product demonstration of GlobalProtect, Prisma Access, and SaaS security is valuable, it should come after discovery. Presenting products prematurely may seem like a generic sales pitch and could fail to address the customer's actual challenges.
* Option D:Prisma SASEis an excellent solution for addressing cloud security and remote user challenges, but recommending it without first understanding the customer's specific needs may undermine trust. This step should follow after discovery and validation of the customer's pain points.
Examples of Discovery Questions:
* What are your primary security challenges with remote users and cloud applications?
* Are you currently able to enforce consistent security policies across your hybrid environment?
* How do you handle identity verification and access control for remote users?
* What level of visibility do you have into traffic to and from your cloud applications?

NEW QUESTION # 42
What does Policy Optimizer allow a systems engineer to do for an NGFW?

- A. Recommend best practices on new policy creation
- B. Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls
- C. Act as a migration tool to import policies from third-party vendors
- D. Identify Security policy rules with unused applications

Answer: D

Explanation:
Policy Optimizer is a feature designed to help administrators improve the efficiency and effectiveness of security policies on Palo Alto Networks Next-Generation Firewalls (NGFWs). It focuses on identifying unused or overly permissive policies to streamline and optimize the configuration.
* Why "Identify Security policy rules with unused applications" (Correct Answer C)?Policy Optimizer provides visibility into existing security policies and identifies rules that have unused or outdated applications. For example:
* It can detect if a rule allows applications that are no longer in use.
* It can identify rules with excessive permissions, enabling administrators to refine them for better security and performance.By addressing these issues, Policy Optimizer helps reduce the attack surface and improves the overall manageability of the firewall.
* Why not "Recommend best practices on new policy creation" (Option A)?Policy Optimizer focuses on optimizingexisting policies, not creating new ones. While best practices can be applied during policy refinement, recommending new policy creation is notits purpose.
* Why not "Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls" (Option B)?Policy Optimizer is not related to license management or tracking. Identifying unused licenses is outside the scope of its functionality.
* Why not "Act as a migration tool to import policies from third-party vendors" (Option D)?Policy Optimizer does not function as a migration tool. While Palo Alto Networks offers tools for third-party firewall migration, this is separate from the Policy Optimizer feature.

NEW QUESTION # 43

A company has multiple business units, each of which manages its own user directories and identity providers (IdPs) with different domain names. The company's network security team wants to deploy a shared GlobalProtect remote access service for all business units to authenticate users to each business unit's IdP.
Which configuration will enable the network security team to authenticate GlobalProtect users to multiple SAML IdPs?

- A. Multiple authentication mode Cloud Identity Engine authentication profile for use on the GlobalProtect portals and gateways
- B. Multiple Cloud Identity Engine tenants for each business unit
- C. Authentication sequence that has multiple authentication profiles using different authentication methods
- D. GlobalProtect with multiple authentication profiles for each SAML IdP

Answer: D

Explanation:
To configure GlobalProtect to authenticate users from multiple SAML identity providers (IdPs), the correct approach involves creating multiple authentication profiles, one for each IdP. Here's the analysis of each option:
* Option A: GlobalProtect with multiple authentication profiles for each SAML IdP
* GlobalProtect allows configuring multiple SAML authentication profiles, each corresponding to a specific IdP.
* These profiles are associated with the GlobalProtect portal or gateway. When users attempt to authenticate, they can be directed to the appropriate IdP based on their domain or other attributes.
* This is the correct approach to enable authentication for users from multiple IdPs.
* Option B: Multiple authentication mode Cloud Identity Engine authentication profile for use on the GlobalProtect portals and gateways
* The Cloud Identity Engine (CIE) can synchronize identities from multiple directories, but it does not directly support multiple SAML IdPs for a shared GlobalProtect setup.
* This option is not applicable.
* Option C: Authentication sequence that has multiple authentication profiles using different authentication methods
* Authentication sequences allow multiple authentication methods (e.g., LDAP, RADIUS, SAML) to be tried in sequence for the same user, but they are not designed for handling multiple SAML IdPs.
* This option is not appropriate for the scenario.
* Option D: Multiple Cloud Identity Engine tenants for each business unit
* Deploying multiple CIE tenants for each business unit adds unnecessary complexity and is not required for configuring GlobalProtect to authenticate users to multiple SAML IdPs.
* This option is not appropriate.

NEW QUESTION # 44

Which three use cases are specific to Policy Optimizer? (Choose three.)

- A. Converting broad rules based on application filters into narrow rules based on application groups
- B. Automating the tagging of rules based on historical log data
- C. Discovering applications on the network and transitions to application-based policy over time
- D. Discovering 5-tuple attributes that can be simplified to 4-tuple attributes
- E. Enabling migration from port-based rules to application-based rules

Answer: B,C,E

Explanation:

The question asks for three use cases specific to Policy Optimizer, a feature in PAN-OS designed to enhance security policy management on Palo Alto Networks Strata Hardware Firewalls. Policy Optimizer helps administrators refine firewall rules by leveraging App-ID technology, transitioning from legacy port-based policies to application-based policies, and optimizing rule efficiency. Below is a detailed explanation of why options A, C, and E are the correct use cases, verified against official Palo Alto Networks documentation.

Step 1: Understanding Policy Optimizer in PAN-OS

Policy Optimizer is a tool introduced in PAN-OS 9.0 and enhanced in subsequent versions (e.g., 11.1), accessible under Policies > Policy Optimizer in the web interface. It analyzes traffic logs to:

* Identify applications traversing the network.
* Suggest refinements to security rules (e.g., replacing ports with App-IDs).
* Provide insights into rule usage and optimization opportunities.

Its primary goal is to align policies with Palo Alto Networks' application-centric approach, improving security and manageability on Strata NGFWs.
