Mock 200-201 Exams | 200-201 Fresh Dumps

The 200-201 certification exam is one of the top-rated career advancement certifications in the market. This Understanding Cisco Cybersecurity Operations Fundamentals (200-201) exam dumps have been inspiring beginners and experienced professionals since its beginning. There are several personal and professional benefits that you can gain after passing the Cisco 200-201 Exam. The validation of expertise, more career opportunities, salary enhancement, instant promotion, and membership of Cisco certified professional community.

Cisco 200-201 Exam requires a comprehensive understanding of fundamental cybersecurity concepts and principles. 200-201 exam also requires knowledge of the latest cybersecurity technologies and tools, including network security appliances, security information and event management (SIEM) systems, and intrusion detection and prevention systems (IDPS).

Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q226-Q231):

NEW QUESTION # 226
What are two denial-of-service (DoS) attacks? (Choose two)

- A. phishing
- B. teardrop
- C. port scan
- D. man-in-the-middle
- E. SYN flood

Answer: B,E

Explanation:
SYN flood and teardrop are two types of denial-of-service (DoS) attacks, which aim to disrupt the availability of a service or a system by overwhelming it with malicious traffic or requests. A SYN flood attack exploits the TCP three-way handshake process by sending a large number of SYN packets to the target's port, without completing the connection. This causes the target to allocate resources for half-open connections, eventually exhausting its memory or bandwidth. A teardrop attack exploits the IP fragmentation process by sending malformed or overlapping IP fragments to the target, causing it to crash or reboot when trying to reassemble them. NEW QUESTION # 227
What are the two characteristics of the full packet captures? (Choose two.)

- A. Reassembling fragmented traffic from raw data.
- B. Troubleshooting the cause of security and performance issues.
- C. Providing a historical record of a network transaction.
- D. Detecting common hardware faults and identify faulty assets.
- E. Identifying network loops and collision domains.

Answer: A,C

NEW QUESTION # 228
Refer to the exhibit.
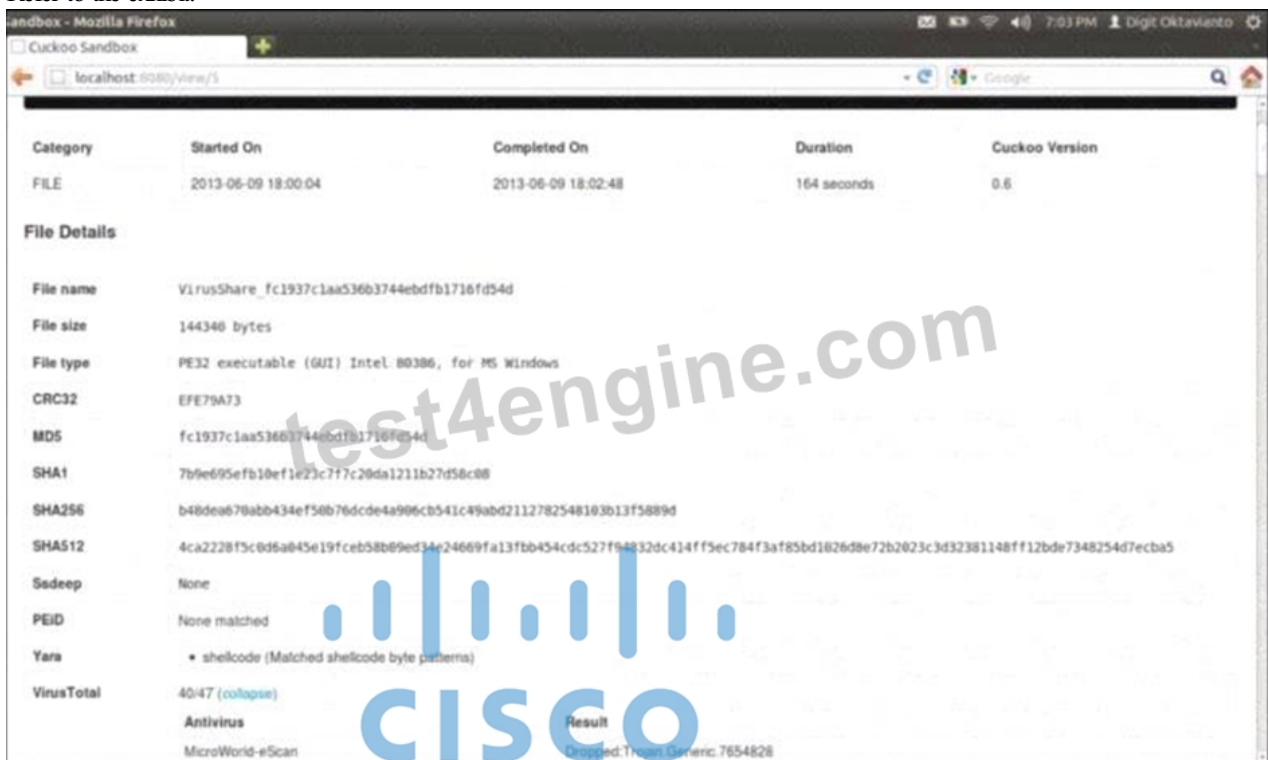

What does this Cuckoo sandbox report indicate?

- A. The file will open unsecure ports when executed.
- B. The file will open a command interpreter when executed.
- C. The file is spyware.
- D. The file is ransomware.

Answer: B

Explanation:
* The Cuckoo sandbox report shows the analysis results of a file named
"VirusShare_fc1937c1aa536b3744ebdfb1716fd5f4d".
* The file type is identified as a PE32 executable for MS Windows.

* The "Yara" section indicates that the file contains shellcode, which matches specific shellcode byte patterns.
* Shellcode typically indicates that the file will execute a payload, often used to open a command interpreter or execute commands directly.
* Additionally, the antivirus result shows that the file was identified as containing a trojan (Trojan.
Generic.7654828), which is consistent with behaviors such as opening a command interpreter for malicious purposes.

NEW QUESTION # 229

An automotive company provides new types of engines and special brakes for rally sports cars. The company has a database of inventions and patents for their engines and technical information Customers can access the database through the company's website after they register and identify themselves. Which type of protected data is accessed by customers?

- A. PSI data
- B. IP data
- C. PII data
- D. PHI data

Answer: B

Explanation:
IP data stands for Intellectual Property data, which is any data that represents the creations of the mind, such as inventions, patents, designs, or artistic works. IP data is protected by law and has commercial value for its owners. In this case, the automotive company has a database of IP data for their engines and technical information, which customers can access after they register and identify themselves. Reference:= Cisco Cybersecurity Operations Fundamentals, Module 1: Security Concepts, Lesson 1.2: Data Protection, Topic 1.2.1: Data Types

NEW QUESTION # 230

What is the difference between deep packet inspection and stateful inspection?

- A. Deep packet inspection is more secure than stateful inspection on Layer 4.
- B. Stateful inspection is more secure than deep packet inspection on Layer 7.
- C. Stateful inspection verifies contents at Layer 4. and deep packet inspection verifies connection at Layer 7.
- D. Deep packet inspection allows visibility on Layer 7, and stateful inspection allows visibility on Layer 4.

Answer: D

NEW QUESTION # 231

......

It is our company that can provide you with special and individual service which includes our 200-201 preparation quiz and good after-sale services. Our experts will check whether there is an update on the question bank every day, so you needn't worry about the accuracy of 200-201 study materials. If there is an update system, we will send them to the customer automatically. As is known to all, our 200-201 simulating materials are high pass-rate in this field, that's why we are so famous. If you are still hesitating, our products should be wise choice for you.
