

New CDCS Test Questions - Valid Test CDCS Tutorial

DOWNLOAD the newest Pass4sures CDCS PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1_meUsmeF_YZahILSN5xl0pbRnR8ZgRO2

Downloading the CDCS free demo doesn't cost you anything and you will learn about the pattern of our practice exam and the accuracy of our CDCS test answers. We constantly check the updating of CDCS vce pdf to follow the current exam requirement and you will be allowed to free update your pdf files one-year. Don't hesitate to get help from our customer assisting.

EXIN CDCS Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Centre Life Cycle and Standards: This section of the exam measures the skills of data center professionals and covers the various stages involved in the life cycle of a data center, from planning and design to implementation and decommissioning.

Topic 2	<ul style="list-style-type: none"> • Designing and Implementing a Data Centre: In this module, the exam assesses the knowledge of Exin data center professionals tasked with the design and implementation of data centers. Candidates will learn the key principles of creating an efficient data center layout, including considerations for scalability, redundancy, and security.
Topic 3	<ul style="list-style-type: none"> • Data Centre Environmental Considerations and Efficiency: This section evaluates the proficiency of data center professionals in addressing environmental factors and promoting efficiency within data center operations. The target audience, including data center managers and engineers, will be tested on their ability to identify and implement measures that enhance energy efficiency, cooling management, and sustainable practices.

Valid Test CDCS Tutorial & New CDCS Exam Discount

Do you want to prove your ability in IT field? Do you want to get more recognition and employment opportunities? So CDCS exam certification will be an important evidence to prove yourself. Almost all those who are working in the IT field know how important to get CDCS exam certification. As we know, everyone's energy is limited, if you want to pass the important CDCS Certification Exam in such short time, the exam software provided by our Pass4sures will be a good helper for your preparation for the exam. The complete questions and exam software created in accordance with the laws of the people's memory will help you succeed in the CDCS exam.

EXIN EPI Certified Data Centre Specialist Sample Questions (Q69-Q74):

NEW QUESTION # 69

What is forced entry resistance based on?

- A. The number of security guards on duty
- **B. Time, tools, and people**
- C. Rate and installed number of CCTV cameras
- D. Building materials used and the location of the data center

Answer: B

Explanation:

Forced-entry ratings use defined attack tools and durations (time-to-breach) executed by attacker profiles.

References: EN 1627-1630 (Resistance Classes-tools and time), UL 972/UL 752 (attack tools/time).

NEW QUESTION # 70

The pipes of a VESDA smoke detection system are installed at the air intake of the air conditioner inside the computer room. Is this a good practice from an early smoke detection point of view?

- **A. No, it will give a longer reaction time for the smoke detection system and there might also be bypass airflow.**
- B. No, the piping should be installed at the air exhaust of the air conditioner, as there can also be a fire inside the air conditioner itself.
- C. Yes, as this reduces the amount of piping to be installed in the data center, as all air will go through the air conditioner.
- D. It depends on the type of gas-based fire suppression which will be installed.

Answer: A

Explanation:

For optimal early smoke detection in a data center, it is crucial that the Very Early Smoke Detection Apparatus (VESDA) system be installed at locations where smoke will be detected as soon as it appears. Positioning the VESDA pipes at the air intake of the air conditioner inside the computer room is not ideal. This placement could result in a delayed detection response and the potential for bypass airflow to occur, which would impede the system's ability to detect smoke effectively.

Detailed Explanation:

When VESDA pipes are installed at the air intake, the detection system relies on the smoke to be drawn into the air conditioning unit

before detection can occur. This setup increases the reaction time as the smoke has to travel through the intake and get processed by the air conditioner. Furthermore, bypass airflow-a phenomenon where not all the air containing smoke particles passes through the VESDA pipes-could also delay or even prevent the system from detecting smoke early.

Ideally, VESDA pipes should be positioned where smoke is likely to accumulate first, such as near the ceiling or in the return airflow path to detect smoke at the earliest possible stage. This ensures that the detection system can quickly trigger alarms, providing more time to address potential fire hazards.

EPI Data Center Specialist References:

EPI Data Center Specialist training highlights that smoke detection should prioritize early response capabilities to maximize safety.

The preferred installation for VESDA pipes is generally at points where smoke would naturally accumulate, rather than relying on air conditioning intakes where airflow can vary and delay detection. In their course materials, EPI emphasizes minimizing reaction time and reducing the impact of airflow dynamics on smoke detection efficiency.

NEW QUESTION # 71

The data center has been in operation for about 1 year and 2 months. The dust levels in the computer room are relatively high.

What is the most likely root cause?

- A. Floorboards are most likely not fitted correctly
- B. Every computer room has high dust levels due to constant high-speed air movement
- C. The cleaning crew is not doing their work properly
- D. Low pressure in the computer room

Answer: A

Explanation:

High dust levels in a computer room are often due to improperly fitted floorboards. When floorboards are not securely installed or do not fit tightly, they allow dust and particles from the subfloor to enter the room. In a data center, this can lead to high levels of dust that affect air quality and equipment performance.

Detailed Explanation:

Raised floors in data centers can accumulate dust and debris, especially if the floorboards are not properly sealed. Loose or improperly fitted floorboards allow contaminants from the subfloor to enter the data center environment, increasing the dust levels over time. Proper installation and maintenance of floor panels are essential to prevent dust infiltration and maintain clean conditions.

EPI Data Center Specialist References:

EPI training emphasizes proper flooring installation and maintenance to control air quality within data centers. Correctly fitted floorboards prevent dust accumulation from the subfloor, which helps protect sensitive equipment and maintains a cleaner environment.

NEW QUESTION # 72

Can you install a raised floor tight to the perimeter of the room?

- A. Yes, but only if the data center is located in Zone 0 with no or little seismic activity
- B. No, but this applies only to raised floors with a height of over 90 cm (3 ft)
- C. No, to avoid damage to the raised floor due to building and hygrothermal movement
- D. Yes, a raised floor needs to be installed tight to the perimeter to prevent air leakage

Answer: C

Explanation:

Raised floors must not be installed flush against perimeter walls. Buildings expand, contract, and shift due to thermal expansion (hygrothermal movement), structural settlement, and seismic activity. If the raised floor is rigidly connected to the walls, this movement transfers directly into the raised floor grid, causing buckling, cracking, or tile misalignment.

Industry standards (e.g., Cisca - Ceilings & Interior Systems Construction Association guidelines) require leaving a small perimeter gap (typically 1-2 cm) between raised floor tiles and walls. This gap is then sealed with flexible firestops or brush gaskets to control air leakage while preserving movement tolerance.

Therefore, the correct practice is to leave a separation space, making answer C correct. Options A and D restrict this requirement incorrectly, while B is factually wrong (sealing against the perimeter is not allowed).

References: Cisca Raised Floor Installation Guidelines, ANSI/TIA-942-B §6.3 (Flooring and Seismic Considerations).

NEW QUESTION # 73

The noise levels in the data center are approximately 91 dB (A).
Do employers need to take precautions?

- A. Yes, since it is mandated by regulations.
- B. No, anything less than 100 dB (A) is acceptable.
- C. As long as the data is compliant to ISO/IEC 27001 it is acceptable.
- D. There are no regulations regarding noise levels inside a building. Regulations only apply to noise pollution outside of the building.

Answer: A

Explanation:

In a data center with noise levels of 91 dB (A), employers are indeed required to take precautions to protect personnel, as this level exceeds commonly accepted safety thresholds for occupational noise exposure. Regulations, such as those from the Occupational Safety and Health Administration (OSHA) or similar agencies, mandate specific controls and protections for environments with high noise levels.

Detailed Explanation:

Noise levels above 85 dB (A) typically trigger requirements for hearing conservation programs. At 91 dB (A), steps like providing ear protection, conducting regular noise assessments, and possibly implementing engineering controls to reduce noise should be taken. Extended exposure to such levels can lead to hearing loss, so regulatory compliance ensures both immediate and long-term protection for personnel.

EPI Data Center Specialist References:

EPI guidelines for data center safety address noise exposure as part of the environmental safety measures. EPI recommends adhering to local occupational health regulations, as excessive noise can harm personnel and affect operational efficiency due to potential health hazards.

NEW QUESTION # 74

.....

Pass4sures is a dumps pdf provider that ensures you pass the EXIN braindumps exam with high rate. You may wonder how we can guarantee the high pass rate. You can rest assured that the CDCS braindumps questions and learning materials are created by our IT teammates who have rich experience in the CDCS Top Questions. And we constantly keep the updating of vce dumps to ensure the accuracy of questions and answers.
