156-315.81 Study Reference & Free Download 156-315.81 Online Tests Promise You to Purchase Safely and Easily

The person who has been able to succeed is because that he believed he can do it. ExamTorrent is able to help each IT person, because it has the capability. ExamTorrent CheckPoint 156-315.81 exam training materials can help you to pass the exam. Any restrictions start from your own heart, if you want to pass the CheckPoint 156-315.81 examination, you will choose the ExamTorrent.

The Check Point Certified Security Expert R81 certification exam is an advanced-level exam that covers a wide range of topics related to network security, including VPN, Firewall, Security Management, and Threat Prevention. 156-315.81 Exam is designed to test the candidate's skills in configuring and troubleshooting Check Point Security systems, implementing advanced security policies, and managing various security features and functions.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q450-Q455):

NEW QUESTION # 450
What destination versions are supported for a Multi-Version Cluster Upgrade?

- A. R77.30 and later
- B. R80.10 and Later
- C. R76 and later
- D. R70 and Later

Answer: B

Explanation:
The correct answer is B. R80.10 and later.
According to the Check Point documentation1, the Multi-Version Cluster Upgrade (MVC) is a new feature in R80.40 and higher that replaces the Connectivity Upgrade (CU) method. MVC allows you to upgrade a cluster to a newer version without a loss in connectivity and test the new version on some of the cluster members before you decide to upgrade the rest of the cluster members. The MVC feature supports the following destination versions2:
* R80.10
* R80.20
* R80.30
* R80.40
* R81
* R81.20
The other options are incorrect because they are either not supported by MVC or they are older than the source version (R80.40).
References:
Multi-Version Cluster (MVC) replaces Connectivity Upgrade (CU) in R80.401 ClusterXL upgrade methods and paths2

NEW QUESTION # 451
Fill in the blank: A new license should be generated and installed in all of the following situations EXCEPT when _____ .

- A. The IP address of the Security Management or Security Gateway has changed.
- B. The license is attached to the wrong Security Gateway.
- C. The existing license expires.
- D. The license is upgraded.

Answer: A

Explanation:
A new license should be generated and installed in all of the following situations except when the IP address of the Security Management or Security Gateway has changed. This is because Check Point licenses are not bound to IP addresses, but to other parameters such as MAC addresses, CPU IDs, or hostnames. Therefore, changing the IP address of a licensed machine does not affect the validity of the license. However, changing other parameters, such as replacing a network card or renaming a machine, may require a new license. Additionally, when the existing license expires or the license is upgraded to a higher level or a different package, a new license is needed.

NEW QUESTION # 452

What is considered Hybrid Emulation Mode?

- A. Load sharing of emulation between an on premise appliance and the cloud.
- B. Manual configuration of file types on emulation location.
- C. Load sharing between OS behavior and CPU Level emulation.
- D. High availability between the local SandBlast appliance and the cloud.

Answer: A

NEW QUESTION # 453

Which statement is false in respect of the SmartConsole after upgrading the management server to R81.20?

- A. Yes, using CPUSE you can make the installer available in the Web Portal of the Management Server
- B. As far as you use version R80.40, no upgrade is needed due to compatibility mode
- C. Yes. You can download the SmartConsole directly from the Download Center
- D. Yes, the SmartConsole Upgrade package can be installed using CPUSE

Answer: B

Explanation:
The statement that is false in respect of the SmartConsole after upgrading the management server to R81.20 is that as far as you use version R80.40, no upgrade is needed due to compatibility mode. This is false because SmartConsole R80.40 is not compatible with R81.20 management server and you need to upgrade your SmartConsole to R81.20 as well. The other statements are true and valid ways to obtain the SmartConsole upgrade package. References: [Check Point Security Expert R81 Installation and Upgrade Guide], page 18.

NEW QUESTION # 454

What is not a purpose of the deployment of Check Point API?

- A. Create products that use and enhance the Check Point solution
- B. Integrate Check Point products with 3rd party solution
- C. Execute an automated script to perform common tasks
- D. Create a customized GUI Client for manipulating the objects database

Answer: D

Explanation:
Explanation
The deployment of Check Point API does not have the purpose of creating a customized GUI Client for manipulating the objects database. The Check Point API is a web service that allows external applications to interact with the Check Point management server using standard methods such as HTTP(S) requests and JSON objects. The Check Point API can be used to execute an automated script to perform common tasks, create products that use and enhance the Check Point solution, and integrate Check Point products with 3rd party solutions. However, creating a customized GUI Client for manipulating the objects database is not a supported or intended use case of the Check Point API.
