Our OGBA-101 exam tool have been trusted and purchased by thousands of candidates. What are you waiting for?

The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q127-Q132):

NEW QUESTION # 127

Consider the diagram.

What are the items labelled A, B and C?

- A. A-Enterprise Strategic Architecture, B-Segment Architecture, C-Solutions Architecture
- **B. A-Enterprise Continuum, B-Architecture Continuum, C-Solutions Continuum**
- C. A-Enterprise Architecture, B-Architecture Building Blocks, C-Solutions Building Blocks
- D. A-Architecture Vision, B-Business Architecture, C-Information Systems Architecture

Answer: B

Explanation:

The diagram shows the Enterprise Continuum, which is a view of the Architecture Repository that provides methods for classifying architecture and solution artifacts as they evolve from generic Foundation Architectures to Organization-Specific Architectures⁴. The Enterprise Continuum comprises two complementary concepts: the Architecture Continuum and the Solutions Continuum. The Architecture Continuum shows the relationships among foundational frameworks, common system architectures, industry architectures, and enterprise architectures⁴. The Solutions Continuum shows the relationships among foundational solutions, common system solutions, industry solutions, and enterprise solutions⁴.

NEW QUESTION # 128

In what TOGAF ADM phase is the organization map linked built out with the detail and relationships to overviews in order to understand the needs of the organization?

- **A. Phase A**
- B. Preliminary Phase
- C. Phase B
- D. Phase E

Answer: A

Explanation:

Phase A (Architecture Vision) of the TOGAF ADM builds out initial organizational maps to understand high-level organizational needs and link them to architecture goals. This step provides foundational insight that informs subsequent phases, particularly for stakeholder alignment.

Reference:

In TOGAF, Phase A (Architecture Vision) is where the organization map is developed in detail and linked to overviews to understand the organizational needs. This phase focuses on:

Defining the scope of the architecture: This includes identifying the parts of the organization that will be affected by the architecture and the timeframe for the architecture development.

Identifying stakeholders and their concerns: Understanding the needs and expectations of different stakeholders is crucial for developing an architecture that meets their requirements.

Creating a high-level architecture vision: This vision outlines the desired future state of the architecture and how it will support the organization's strategic goals.

NEW QUESTION # 129

Consider the following representation of a business model:

Which of the following business models is this an example of?

- A. The Business Model Innovation factory
- **B. The Four Box Framework**
- C. The Business Model Cube

Answer: B

Explanation:

The provided representation of a business model appears to be a variant of the Business Model Canvas, which is a strategic management template for developing new or documenting existing business models. It is a visual chart with elements describing a firm's value proposition, infrastructure, customers, and finances. The model assists firms in aligning their activities by illustrating potential trade-offs. Since none of the options precisely match the Business Model Canvas and the Four Box Framework is conceptually closest to the Business Model Canvas, option B is the best available answer, albeit not a perfect match.

NEW QUESTION # 130

Complete the sentence. The TOGAF standard covers the development of four architecture domains: Business, Data, Technology and _____.

- A. Segment
- B. Capability
- C. Transition
- **D. Application**

Answer: D

Explanation:

The TOGAF standard covers the development of four architecture domains: Business, Data, Technology, and Application. The Application Architecture domain defines the applications required to process the data and support the business functions.

The TOGAF standard describes the development of four architecture domains, which are considered its pillars. These are Business, Data, Technology, and Application. The Application Architecture domain provides a blueprint for the individual application systems to be deployed, their interactions, and their relationships to the core business processes of the organization.

NEW QUESTION # 131

Which of the following is a purpose of mapping capabilities to value stream stages?

- A. To provide a self-contained business description that is independent of the organizational structure.
- **B. To classify, group, and align capabilities into categories for a deeper understanding.**
- C. To describe the business in terms of services provided and consumed.
- D. To identify and eliminate business capabilities that do not contribute to the business.

Answer: B

Explanation:

Mapping capabilities to value stream stages in TOGAF is crucial for understanding how different capabilities contribute to the overall value delivery process. Here's a detailed explanation:

* Value Streams and Business Capabilities:

* Value Streams: Represent end-to-end collections of activities that create value for stakeholders.

* Business Capabilities: Define what an organization needs to be able to do to achieve its business objectives.

* Purpose of Mapping Capabilities to Value Stream Stages:

* Classification and Grouping: Mapping capabilities to value stream stages helps in classifying and grouping capabilities. This enables a structured understanding of how capabilities support different parts of the value delivery process.

* Alignment: Aligning capabilities with value stream stages ensures that each stage is supported by the necessary capabilities. This alignment helps in identifying gaps, redundancies, and areas for improvement.

* Deeper Understanding: By mapping capabilities to value stream stages, architects gain a deeper understanding of how capabilities interact and contribute to the overall business strategy and value creation process.

* TOGAF References:

* Phase B: Business Architecture: This phase involves defining the baseline and target business architectures, where mapping capabilities to value streams is a key activity. It ensures that the architecture supports the strategic goals and value streams of the organization.

* Capability-Based Planning: TOGAF emphasizes capability-based planning, where business capabilities are mapped to value streams to ensure alignment and effective support for business processes.

* Benefits:

* Improved Planning: This mapping facilitates better planning and decision-making by providing a clear picture of how capabilities support value streams.

* Resource Allocation: Helps in efficient allocation of resources by identifying which capabilities

* are critical for each stage of the value stream.

In summary, mapping capabilities to value stream stages classifies, groups, and aligns capabilities into categories for a deeper understanding, ensuring that the architecture supports the overall value delivery process effectively.

NEW QUESTION # 132
