The image is a promotional document for Supermicro's liquid cooling solutions. It features the Supermicro logo at the top left and a blue header with the title "SUPERMICRO RACK SCALE LIQUID COOLING SOLUTIONS". The document is divided into two main columns. The left column, titled "LIQUID COOLING ADVANTAGES", lists three key benefits: a reduction in electricity costs of cooling infrastructure in the server by up to 89%, a reduction in electricity costs for the entire data center by up to 40%, and a reduction in data center server noise by up to 55%. The right column, titled "SUPERMICRO DIRECT TO CHIP LIQUID COOLING SOLUTIONS", describes a liquid-cooled rack solution that delivers superior performance and efficiency for large-scale AI and cloud-scale compute infrastructure. It lists several advantages: a full turn-key single source solution, support for high densities and TDPs, fully validated and tested systems, accelerated lead times, and enterprise-grade redundant cooling pumps and power supplies. A photograph of a Supermicro server rack is shown on the right. At the bottom right, it says "FEBRUARY 2024".

**SOLUTION GUIDE**

**SUPERMICRO RACK SCALE LIQUID COOLING SOLUTIONS**

**LIQUID COOLING ADVANTAGES**

- UP TO **89%** REDUCTION Electricity Costs of Cooling Infrastructure in Server
- UP TO **40%** REDUCTION in Electricity Costs for Entire Data Center
- UP TO **55%** REDUCTION in Datacenter Server Noise

**SUPERMICRO DIRECT TO CHIP LIQUID COOLING SOLUTIONS**

Liquid cooled rack solution that delivers superior performance and efficiency for large scale AI and cloud scale compute infrastructure

- Full turn-key single source solution optimized from proven total solution blueprints of compute, GPU, storage, networking and power and cooling reference designs, with integrated power management tools
- Support highest densities and highest TDP CPUs and GPUs with up to 100kW power and cooling per rack
- Fully validated and tested at system (L10), rack (L11) and cluster (L12) levels
- Accelerated lead times based on in-stock inventory with deployment in weeks versus years
- Enterprise-grade redundant cooling pump and power supplies, leak-proof connectors and leak detection

**DATA CENTER SCALE LIQUID COOLING REDUCES COSTS AND INCREASES PERFORMANCE**

The latest servers with multiple CPUs and GPUs are creating a significant challenge for data center operators. High end servers are now generating up to 10kW of heat, which must be removed from the server. Traditional air cooling through CRAC units, even with hot and cold aisle separation, are expensive and inefficient.

Servers that are application optimized for AI, HPC, and Analytics require the latest in CPU and GPU technologies, which run hotter than previous generations. Multiple CPUs and GPUs per server are needed for performance intensive computing, driving up the electricity demands for the server as well as at the rack level.

You feel tired when you are preparing hard for Supermicro SDLCSA exam, do you know what other candidates are doing? Look at the candidates in IT certification exam around you. Why are they confident when you are nervous about the exam? Is your ability below theirs? Of course not. Have you wondered why other IT people can easily pass Supermicro SDLCSA test? The answer is to use PrepAwayTest Supermicro SDLCSA questions and answers which can help you sail through the exam with no mistakes. Don't believe it? Do you feel it is amazing? Have a try. You can confirm quality of the exam dumps by experiencing free demo. Hurry up and click PrepAwayTest.com.

As we all know, a lot of efforts need to be made to develop a SDLCSA learning prep. Firstly, a huge amount of first hand materials are essential, which influences the quality of the compilation about the SDLCSA actual test guide. We have tried our best to find all reference books. Then our experts have carefully summarized all relevant materials of the SDLCSA exam. Also, annual official test is also included. They have built a clear knowledge frame in their minds before they begin to compile the SDLCSA Actual Test guide. It is a long process to compilation. But they stick to work hard and never abandon. Finally, they finish all the compilation because of their passionate and persistent spirits. So you are lucky to come across our SDLCSA exam questions.

## 100% Pass Quiz SDLCSA - Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam High Hit-Rate Test Dumps.zip

As the captioned description said, our SDLCSA practice materials are filled with the newest points of knowledge about the exam. With many years of experience in this line, we not only compile real test content into our SDLCSA practice materials, but the newest in to them. Allowing for there is a steady and growing demand for our SDLCSA practice materials with high quality at moderate prices, we never stop the pace of doing better. All newly supplementary updates will be sent to your mailbox one year long. And we shall appreciate it if you choose any version of our SDLCSA practice materials for exam and related tests in the future.

### Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q40-Q45):

#### NEW QUESTION # 40

In the video, how many AOC NIC cards are located on the LPIO board?

- A. 0
- **B. 1**
- C. 2
- D. 3

**Answer: B**

#### NEW QUESTION # 41

When reseating the PCIe tray, how do you know when the PCIe tray has been correctly inserted all the way back into the system?

- **A. The levers on each side of the front of the PCIe tray that were in the down position should move up all the way into the locked position automatically**
- B. The front of the PCIe tray should be slightly sticking out of the system
- C. The levers on each side of the front of the PCIe tray that were in the up position should move down slightly
- D. The levers on each side of the front of the PCIe tray that were in the down position should move up slightly

**Answer: A**

Explanation:

Reseating the PCIe tray in a Supermicro system like the SYS-421GE-TNHR2-LCC involves aligning it with the chassis and locking it in place. Per Supermicro's design (e.g., SYS-420GP-TNAR), the tray has levers that start in the down (unlocked) position during insertion. When fully seated, these levers automatically move up to the locked position, clicking into place to secure the tray and ensure proper connection to power and cooling (e.g., DLC manifolds). Option A (sticking out) indicates incomplete insertion, B (slightly up) is insufficient, and C (up to down) reverses the mechanism. D reflects Supermicro's DLC system precision, ensuring tray stability. References: Supermicro PCIe tray installation guides, DLC component alignment standards.

#### NEW QUESTION # 42

What is the color of the PCIe tray's air shroud?

- A. Opaque
- **B. Black**
- C. Clear
- D. White

**Answer: B**

Explanation:

The air shroud in Supermicro systems, including those with Direct Liquid Cooling (DLC) solutions like the SYS-421GE-TNHR2-LCC, is typically designed to direct airflow (or in hybrid systems, assist with liquid cooling efficiency) and is made of plastic or composite materials. Based on Supermicro's standard design practices seen in technical documentation and product images (e.g., SYS-420GP-TNAR, a similar GPU server with DLC), the PCIe tray's air shroud is consistently black. This color aids in heat absorption and dissipation, aligning with Supermicro's focus on thermal efficiency in DLC systems, where cold plates and coolant distribution units (CDUs) manage heat directly at the chip level. White or clear shrouds are less common due to aesthetic and

thermal considerations, and "opaque" is not a specific color designation. Thus, black is the correct choice, reflecting Supermicro's engineering standards for high-performance computing components.

References: Supermicro product images and manuals (e.g., SYS-420GP-TNAR User Manual), general DLC solution descriptions.

#### NEW QUESTION # 43

What part on the motherboard tray do you need to remove first, in order to remove the air shroud?

- A. The support bar at the front of the motherboard tray
- **B. There is no support bar on the motherboard tray that prevents you from removing the air shroud**
- C. The support bar at the back of the motherboard tray
- D. The support bar in the middle of the motherboard tray

**Answer: B**

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, the air shroud on the motherboard tray is typically a lift-off component not obstructed by a support bar. Unlike some designs with structural bars, Supermicro's high-end servers (per manuals like SYS-420GP-TNAR) often feature open tray layouts for easy access, especially in DLC configurations where liquid cooling reduces reliance on complex air channels. Options A, B, and C assume a bar exists and must be removed, but no such requirement is standard. The shroud lifts off after screw removal, making D correct. Supermicro's DLC design simplifies maintenance, supporting this conclusion. References: Supermicro motherboard tray documentation, DLC system accessibility features.

#### NEW QUESTION # 44

What safety feature prevents the motherboard tray from being removed too quickly and potentially dropped?

- A. A safety switch
- B. A safety pin
- C. A safety cable
- **D. A safety latch**

**Answer: D**

Explanation:

In Supermicro servers like the SYS-421GE-TNHR2-LCC, the motherboard tray is a critical component, often heavy with CPUs and DLC cold plates. A safety latch is the standard feature to prevent rapid removal and accidental drops, as seen in manuals (e.g., SYS-420GP-TNAR). Latches on both sides must be released deliberately, ensuring controlled extraction. A cable (A) might tether but not prevent speed, a switch (B) controls electronics, and a pin (D) is less common for trays. Supermicro's DLC systems prioritize safe handling, making C the correct safety mechanism.
