Therefore, our Sharing-and-Visibility-Architect Study Materials are attributive to high-efficient learning.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q33-Q38):

NEW QUESTION # 33

Universal Containers (UC) has recently changed its internal policy to follow market regulations and create an internal team to manage the collection process. Only this team should have access to Invoke records. currently, invoke is a child in a Master-Detail relationship to Account. Although related lists have been removed from the page layouts, some profiles stills have access to the invoice object.

Which approach should an architect recommend to fix this problem?

- A. Create a Permission Set with No Access to the Invoice object and assign it to unauthorized users.
- B. Create a new Profile with no access to the Invoice object and assign it to all unauthorized users.
- C. Change the Invoice organization-wide default from Controlled by Parent to Private and remove invoice access from the unauthorized
- **D. Replace Account and Invoice Master Detail Relationship by a Lookup and remove Invoice Access from the unauthorized profiles,**

Answer: D

Explanation:

Explanation

Master-Detail relationships enforce the sharing and security settings of the parent object on the child object.

This means that if a user has access to an Account record, they will also have access to any Invoice records that are related to that Account. To prevent this, the architect can recommend replacing the Master-Detail relationship with a Lookup relationship, which allows the child object to have its own sharing and security settings independent of the parent object. Then, the architect can remove the Invoice access from the unauthorized profiles or use other mechanisms such as sharing rules or permission sets to restrict or grant access to the Invoice object. Therefore, the answer C is correct and the other options are incorrect

NEW QUESTION # 34

A user at Universal Containers would like to give access to a Report folder to someone else in the organization.

Which two access permissions should the user have to support this requirement?

Choose 2 answers.

- A. The "Editor" Report folder permission.
- **B. The "Manage Reports in Public Folders" Profile permission.**
- **C. The "Manager" Report folder permission.**
- D. The "Viewer" Report folder permission

Answer: B,C

Explanation:

Explanation

To give access to a report folder to someone else in the organization, the user needs to have the "Manage Reports in Public Folders" profile permission and the "Manager" report folder permission. The "Viewer" and "Editor" report folder permissions only allow the user to view or edit the reports in the folder, but not to share the folder with others

NEW QUESTION # 35

Universal Containers is updating its Organization-Wide Sharing Settings for the Account Object from a "Public Read/Write" model to a "Private" model, so that they can hide certain national accounts from sales reps and sales managers. These national accounts should only be accessible by sales directors and above. Universal Container's Role Hierarchy matches its organizational hierarchy.

Which two options should the Architect consider when designing the solution? Choose 2 answers

- **A. National accounts must be owned by a user who is above the sales managers in the Role Hierarchy.**
- B. Sales directors will need a sharing rule created so that they can see accounts owned by Sales Users.
- **C. If a sales rep is added to the Opportunity Team for a national account, they will gain access to account data.**
- D. Apex managed sharing will have to be disabled for the account object to protect the national accounts.

Answer: A,C

NEW QUESTION # 36

A sales rep at Universal Containers was added to an opportunity team with Read/Write permissions.

Which action is she allowed to perform in the opportunity?

- A. Replace opportunity owner.
- **B. Update opportunity stage.**
- C. Add/remove members in the opportunity team.

Answer: B

Explanation:

The Opportunity Team feature allows collaboration by granting specific permissions (Read, Read/Write, or access defined by roles) to users added to an opportunity. In this scenario, the sales rep has Read/Write permissions, which means they can:

- * View and update the opportunity, including editing fields like the opportunity stage.
- * They cannot perform administrative tasks like transferring ownership or managing the opportunity team unless explicitly granted "Full Access" or assigned additional roles that permit these actions.
- * Option A (Correct): Updating the opportunity stage is allowed as part of Read/Write access.
- * Option B: Replacing the opportunity owner requires administrative privileges, which are not included in standard Read/Write permissions.
- * Option C: Adding or removing members in the opportunity team requires "Full Access," which exceeds Read/Write permissions.

NEW QUESTION # 37

Universal Containers has recently activated an integration that synchronizes customer information and orders into their CRM of choice: Salesforce.com. One of their largest customers, United Air, has over 12,000 unique contacts. Since the integration was activated, sales reps are having trouble adding contacts to the United Air account. When a sales rep adds a contact, they get the following error message: UNABLE_TO_LOCK_ROW, This issue seems to affect the United Air account and several other large customers. The sales rep can usually save the contact by trying again later in the evening. What should the Architect recommend as a possible solution?

- A. Remove sharing rules and replace them with Apex sharing for United Air and the other large accounts.
- **B. Implement an account hierarchy and redistribute the contacts evenly under the child accounts.**
- C. Create a permission set for the sales team to grant them Read/Write access to all account fields.
- D. Add a role-based sharing rule so all sales team members have Read/Write access to contacts.

Answer: B

NEW QUESTION # 38

.....
