BraindumpsVCE Salesforce Mule-Arch-201 exam training materials have the best price value. Compared to many others training materials, BraindumpsVCE's Salesforce Mule-Arch-201 exam training materials are the best. If you need IT exam training materials, if you do not choose BraindumpsVCE's Salesforce Mule-Arch-201 Exam Training materials, you will regret forever. Select BraindumpsVCE's Salesforce Mule-Arch-201 exam training materials, you will benefit from it last a lifetime.

Our company boasts top-ranking expert team, professional personnel and specialized online customer service personnel. Our experts refer to the popular trend among the industry and the real exam papers and they research and produce the detailed information about the Mule-Arch-201 exam dump. They constantly use their industry experiences to provide the precise logic verification. The Mule-Arch-201 prep material is compiled with the highest standard of technology accuracy and developed by the certified experts and the published authors only. The test bank is finished by the senior lecturers and products experts. The Mule-Arch-201 Exam Dump includes the latest Mule-Arch-201 PDF test questions and practice test software which can help you to pass the test smoothly. The test questions cover the practical questions in the test Salesforce certification and these possible questions help you explore varied types of questions which may appear in the test and the approaches you should adapt to answer the questions.

Actual Mule-Arch-201 Exam Questions - Mule-Arch-201 Free Demo & Mule-Arch-201 Valid Torrent

As the saying goes, practice makes perfect. We are now engaged in the pursuit of Craftsman spirit in all walks of life. Professional and mature talents are needed in each field, similarly, only high-quality and high-precision Salesforce Certified MuleSoft Platform Architect qualification question can enable learners to be confident to take the qualification examination so that they can get the certificate successfully, and our Mule-Arch-201 Learning Materials are such high-quality learning materials, it can meet the user to learn the most popular test site knowledge. Because our experts have extracted the frequent annual test centers are summarized to provide users with reference.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q47-Q52):

NEW QUESTION # 47

A Platinum customer uses the U.S. control plane and deploys applications to CloudHub in Singapore with a default log configuration.

The compliance officer asks where the logs and monitoring data reside?

- **A. Logs and monitoring data are held in the United States**
- B. Logs are held in Singapore and monitoring data is held in the United States
- C. Logs are held in the United States and monitoring data is held in Singapore
- D. Logs and monitoring data are held in Singapore

Answer: A

Explanation:

For applications deployed on CloudHub in a foreign region (e.g., Singapore), MuleSoft handles log and monitoring data in the region where the control plane resides. This data storage policy is standard for CloudHub deployments to maintain centralized log and monitoring data.

Data Location:

For a U.S.-based control plane, all logs and monitoring data are stored in the United States, regardless of the deployment region.

Although the application itself runs in Singapore, data related to application performance and logs is not localized to the deployment region.

of Correct Answer (B):

Since the control plane is based in the United States, all operational data like logs and monitoring will also be stored there, ensuring compliance with MuleSoft's data handling policies.

of Incorrect Options:

Option A and D are incorrect because MuleSoft does not store logs or monitoring data in the application deployment region when the control plane is located in the United States.

Option C suggests mixed storage, which does not align with MuleSoft's data policy structure.

Reference

For details on data residency in CloudHub deployments, refer to MuleSoft's documentation on CloudHub control planes and data handling policies.

NEW QUESTION # 48

A manufacturing company has deployed an API implementation to CloudHub and has not configured it to be automatically restarted by CloudHub when the worker is not responding.

Which statement is true when no API Client invokes that API implementation?

- **A. No alert on the API invocations is raised but alerts on the API implementation can be raised**
- B. No alert on the API invocations and APT implementation can be raised
- C. Alerts on the APT invocation and API implementation can be raised
- D. Alerts on the API invocations are raised but no alerts on the API implementation can be raised

Answer: A

Explanation:

When an API implementation is deployed on CloudHub without configuring automatic restarts in case of worker non-responsiveness, MuleSoft's monitoring and alerting behavior is as follows:

API Invocation Alerts:

If no clients are invoking the API, there will be no invocation alerts triggered, as alerts related to invocations depend on actual client requests.

Implementation-Level Alerts:

Even without invocation, CloudHub can still monitor the state of the API implementation. If the worker becomes unresponsive, an alert related to the API implementation's health or availability could still be raised.

Why Option C is Correct:

This option correctly identifies that no invocation-related alerts would be triggered in the absence of client requests, while implementation-level alerts could still be generated based on the worker's state.

Reference

For additional information, check MuleSoft documentation on CloudHub monitoring and alert configurations to understand worker status alerts versus invocation alerts.

NEW QUESTION # 49

An API implementation is being designed that must invoke an Order API, which is known to repeatedly experience downtime.

For this reason, a fallback API is to be called when the Order API is unavailable.

What approach to designing the invocation of the fallback API provides the best resilience?

- A. Search Anypoint Exchange for a suitable existing fallback API, and then implement invocations to this fallback API in addition to the Order API
- B. Set an option in the HTTP Requester component that invokes the Order API to instead invoke a fallback API whenever an HTTP 4xx or 5xx response status code is returned from the Order API
- C. Create a separate entry for the Order API in API Manager, and then invoke this API as a fallback API if the primary Order API is unavailable
- D. Redirect client requests through an HTTP 307 Temporary Redirect status code to the fallback API whenever the Order API is unavailable

Answer: A

Explanation:

Correct Answer: Search Anypoint exchange for a suitable existing fallback API, and then implement invocations to this fallback API in addition to the order API

>> It is not ideal and good approach, until unless there is a pre-approved agreement with the API clients that they will receive a HTTP 3xx temporary redirect status code and they have to implement fallback logic their side to call another API.

>> Creating separate entry of same Order API in API manager would just create an another instance of it on top of same API implementation. So, it does NO GOOD by using clone od same API as a fallback API. Fallback API should be ideally a different API implementation that is not same as primary one.

>> There is NO option currently provided by Anypoint HTTP Connector that allows us to invoke a fallback API when we receive certain HTTP status codes in response.

The only statement TRUE in the given options is to Search Anypoint exchange for a suitable existing fallback API, and then implement invocations to this fallback API in addition to the order API.

NEW QUESTION # 50

Once an API Implementation is ready and the API is registered on API Manager, who should request the access to the API on Anypoint Exchange?

- A. API Client
- B. API Consumer
- C. None
- D. Both

Answer: B

Explanation:

Correct Answer: API Consumer

>> API clients are piece of code or programs that use the client credentials of API consumer but does not directly interact with Anypoint Exchange to get the access

>> API consumer is the one who should get registered and request access to API and then API client needs to use those client credentials to hit the APIs So, API consumer is the one who needs to request access on the API from Anypoint Exchange

NEW QUESTION # 51

What are 4 important Platform Capabilities offered by Anypoint Platform?

- A. API Versioning, API Runtime Execution and Hosting, API Invocation, API Consumer Engagement
- B. API Design and Development, API Runtime Execution and Hosting, API Versioning, API Deprecation
- C. API Design and Development, API Deprecation, API Versioning, API Consumer Engagement
- **D. API Design and Development, API Runtime Execution and Hosting, API Operations and Management, API Consumer Engagement**

Answer: D

Explanation:

Correct Answer: API Design and Development, API Runtime Execution and Hosting, API Operations and Management, API Consumer Engagement

- >> API Design and Development - Anypoint Studio, Anypoint Design Center, Anypoint Connectors
- >> API Runtime Execution and Hosting - Mule Runtimes, CloudHub, Runtime Services
- >> API Operations and Management - Anypoint API Manager, Anypoint Exchange
- >> API Consumer Management - API Contracts, Public Portals, Anypoint Exchange, API Notebooks

NEW QUESTION # 52

.....

Success in acquiring the Mule-Arch-201 is seen to be crucial for your career growth. But preparing for the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam in today's busy routine might be difficult. This is where actual Salesforce Mule-Arch-201 Exam Questions offered by BraindumpsVCE come into play. For those candidates, who want to clear the Mule-Arch-201 certification exam in a short time, we offer updated and real exam questions.

Mule-Arch-201 Labs: https://www.braindumpsvce.com/Mule-Arch-201_exam-dumps-torrent.html

Nowadays, using electronic materials to prepare for the exam has become more and more popular, so now, you really should not be restricted to paper materials any more, our electronic Mule-Arch-201 exam torrent will surprise you with their effectiveness and usefulness, and the pass rate of Mule-Arch-201 Practice Test is high as 98% to 100%, 100% Updated & Latest Salesforce Mule-Arch-201 Exam Dumps.

The more the user is able to move forward, the better, Save and share interesting Mule-Arch-201 images on Pinterest™, Nowadays, using electronic materials to prepare for the exam has become more and more popular, so now, you really should not be restricted to paper materials any more, our electronic Mule-Arch-201 exam torrent will surprise you with their effectiveness and usefulness, and the pass rate of Mule-Arch-201 Practice Test is high as 98% to 100%.

100% Pass Quiz Mule-Arch-201 - Salesforce Certified MuleSoft Platform Architect –Valid Certification Dump

100% Updated & Latest Salesforce Mule-Arch-201 Exam Dumps, Our company has done the research of the Mule-Arch-201 study material for several years, and the experts and professors from our company have created the famous Mule-Arch-201 study materials for all customers.

Many candidates waste a lot of time and money to prepare for their exams, if you use Mule-Arch-201 latest exam torrent file, only 24-72 hours' preparation before the test will help you master all the questions and answers.

The high quality and efficiency of Mule-Arch-201 test guide has been recognized by users.
