Plat-UX-101資格トレーニング、Plat-UX-101オンライン試験

本当にPlat-UX-101試験に合格するつもりなら、当社Salesforceのソフトウェアは迅速かつ便利な学習を提供し、最高の学習教材を取得し、試験の非常に良い準備をします。Plat-UX-101ガイド急流の内容は習得が容易であり、重要な情報を簡素化しました。さらに、Plat-UX-101準備急流は、より重要な情報をより少ない質問と回答で伝えます。Plat-UX-101試験問題により、学習はリラックスして非常に効率的です。

Salesforce Certified Platform User Experience Designer 認定 Plat-UX-101 試験問題 (Q37-Q42):

質問 # 37

A UX Designer is evaluating whether to perform a moderated or unmoderated usability study on their prototype solution to gain user feedback.

Which reason would lead the designer to choose a moderated study?

- A. It is less expensive and time-consuming to conduct.
- B. Sessions can be completed at any time and anywhere.
- C. Follow-up questions can be asked to obtain further information about the issues participants may encounter.

正解: C

解説:

A moderated usability study is a type of user research where the UX Designer interacts with the participants as they perform tasks on the prototype solution. The designer can ask follow-up questions to obtain further information about the issues participants may encounter, such as why they made certain choices, how they felt about the experience, and what they would like to see improved. This can help the designer gain deeper insights into the user needs, preferences, and pain points, as well as validate or invalidate their design assumptions. A moderated study also allows the designer to clarify any confusion or ambiguity that the participants may have during the session, and to adjust the tasks or scenarios as needed. Reference:

質問 # 38

A UX Design team is doing a review of a new Lightning Web Component (LWC). They are following the Salesforce Lightning Design System (SLDS) block, element, modifier (BEM) naming conventions. Which class does NOT follow this convention?

- A. .slds-box
- B. .slds-avatar_circle
- C. .slds--size-l-of-2

正解: C

解説:

The SLDS BEM naming convention consists of three parts: block, element, and modifier. A block is a standalone component that can be reused across projects, such as a button, a card, or a modal. An element is a part of a block that has no standalone meaning, such as a label, an icon, or a header. A modifier is a flag that changes the appearance or behavior of a block or an element, such as size, color, or state. The modifier is separated from the block or element by two hyphens (--), and can have a value separated by a single hyphen (-), such as .slds-button-brand or .slds-button-neutral. The class .slds-size-l-of-2 does not follow this convention because it has no block or element name before the modifier. It should be something like .slds-grid-size-l-of-2 or .slds-col-size-l-of-2. 質問 # 39

A UX Designer at Cloud Kicks wants to utilize a design thinking approach for the design of new customer services. Which approach combination encourages more creative problem-solving?

- A. Simple and innovative
- B. Agile and efficient
- C. Divergent and convergent

正解: C

解説:

A design thinking approach is a human-centered method for solving complex problems and creating innovative solutions. It involves understanding the needs and desires of the users, generating and testing multiple ideas, and iterating on the feedback and results. A design thinking approach can be divided into two types of thinking: divergent and convergent. Divergent thinking is the process of generating many possible solutions to a problem without judging or filtering them. It encourages creativity, exploration, and experimentation. Convergent thinking is the process of evaluating, selecting, and refining the best solution to a problem. It involves analysis, logic, and criteria. Divergent and convergent thinking are complementary and cyclical. They help the designer to expand the solution space and then narrow it down to the most feasible and desirable option. By using both types of thinking, the designer can encourage more creative problem-solving and avoid premature convergence or fixation on a single idea. Therefore, the best

approach combination for the UX Designer at Cloud Kicks is divergent and convergent thinking. Trailhead: Design Thinking, Trailhead: Salesforce User Experience Designer Certification Prep, Divergent and Convergent Design Thinking

質問 # 40

Cloud Kicks' development team is working on the build of a new custom component using VS Code. They often have new CSS classes and properties conflicting with the Salesforce Lightning Design System (SLDS). What should simplify working with SLDS in Lightning Components?

- A. Install SLDS creator from AppExchange
- **B. Install SLDS Validator extension for VS Code**
- C. Install Lightning Design System Plugin for Sketch

正解: B

解説:

The best option to simplify working with SLDS in Lightning Components is to install SLDS Validator extension for VS Code. This extension (salesforcedx-vscode-slds) scans the markup of the components, validates it against the SLDS documentation, and provides suggestions on how to improve the code¹. It also offers syntax highlighting, code completion, and context awareness for SLDS tokens and utility classes¹. By using this extension, the development team can avoid CSS conflicts, follow SLDS best practices, and create consistent and accessible components².

Installing SLDS creator from AppExchange is not a valid option, as there is no such app available on the AppExchange. The AppExchange is a marketplace for Salesforce apps, components, and consulting services, not for VS Code extensions³.

Installing Lightning Design System Plugin for Sketch is also not a valid option, as it is not related to VS Code or Lightning Components. Sketch is a design tool that allows users to create wireframes, mockups, and prototypes⁴. The Lightning Design System Plugin for Sketch is a plugin that provides SLDS components, icons, and styles for Sketch users. It can help designers to create consistent and compatible designs, but it cannot help developers to work with SLDS in VS Code.

質問 # 41

A UX Designer is hired to help create a brand new app for the AppExchange with a human-centered approach. Which strategy will most likely strengthen employee relationships the most?

- **A. Invite employees from different departments and create a journey map together.**
- B. Send an anonymous survey to collect ideas from across the whole company.
- C. Create a first draft in a design team and then share it for feedback with employees.

正解: A

解説:

A journey map is a visual representation of the steps, emotions, and pain points that a user goes through when interacting with a product or service. A journey map can help the UX Designer understand the user's needs, goals, expectations, and frustrations, and identify opportunities for improvement or innovation^{1 2}. Creating a journey map together with employees from different departments is a strategy that can strengthen employee relationships the most, because it can:

Foster collaboration and communication: Inviting employees from different departments to create a journey map can help them share their perspectives, insights, and ideas, and learn from each other. This can also help them align on a common vision and goal, and build trust and respect among the team members^{3 4}. Increase engagement and ownership: Inviting employees from different departments to create a journey map can help them feel more involved and invested in the design process and the outcome. This can also help them develop a sense of ownership and responsibility for the product or service, and increase their motivation and satisfaction^{3 4}. Enhance creativity and innovation: Inviting employees from different departments to create a journey map can help them generate more diverse and creative solutions, as they can leverage their different skills, experiences, and backgrounds. This can also help them challenge their assumptions and biases, and explore new possibilities and opportunities^{3 4}. Create a first draft in a design team and then share it for feedback with employees: This is not a strategy that can strengthen employee relationships the most, because it can create a sense of exclusion and hierarchy among the employees. The design team may appear to be the sole authority and decision-maker, while the other employees may feel like passive observers or critics. This can also limit the diversity and quality of the feedback, as the employees may not have enough context or understanding of the design process and the user's

needs³⁴ Send an anonymous survey to collect ideas from across the whole company. This is not a strategy that can strengthen employee relationships the most, because it can reduce the interaction and connection among the employees. An anonymous survey may not allow the employees to express their thoughts and feelings fully, or to receive any feedback or recognition for their contributions. This can also make the employees feel detached and indifferent about the design process and the outcome³⁴ Create a Journey Map Unit | Salesforce Trailhead How to Create a Customer Journey Map - UX Mastery How to Use Journey Mapping to Improve Employee Engagement How to Use Journey Mapping to Drive Collaboration and Innovation
