## Salesforce Communications Cloud Accredited Professional Sample Questions (Q63-Q68):

### NEW QUESTION # 63

Universal containers (UC) sells bundle of the TV service and VOIP line to its customer UC requires a modem to be one of the technical products as part of the bundle decomposition. UC also requires that when a customer orders an additional VOIP line in the future, it reuses the same modem technical product that was decomposed as part of initial bundle order.

- A. Create an M:1 decomposition relationship between TV to Modem and delete the decomposition relationships after the initial bundle order.
- B. Create a 1:1 decomposition relationship between TV to Modem and VOIP to Modem and decompose conditionally based on whether the modem is already present in the Technical Inventory
- C. Create a 1:1 decomposition relationship between TV and VOIP to modem and set the scope to order item on Modem Technical Product
- D. Create an M:1 decomposition relationship between TV to Modem and VOIP to Modem and set scope to account on modem technical product

**Answer: D**

### NEW QUESTION # 64

During the discovery phase a consultant learns that provisioning the internet service requires multiple steps of integration. The first step returns an identifier that is required for the second steps, but is meaningless in ensuring steps afterwards. How should the consultant implement this requirement in Order Management with the least amount of configurations?

- A. Model a non-assetizable attribute on the technical product to hold the identifiers configure both orchestration items for provisioning on the same swimlane
- B. Implement the integration using an integration procedure, which can make both callouts, and pass identifier as a variable from one step to another
- C. Implement the multiple call logic in Enterprise service Bus and have a single callout to the ESB in orchestration
- D. Create a Callout that uses a customer adaptor. This adaptor is implemented in Apex and can make both callouts and keep the identifier in memory in between callouts

**Answer: A**

### NEW QUESTION # 65

A company is selling voice products to business customers. The offer allows customers to select devices of various models. The product modeler intends to create a phone add-on product specification with voice offers with a cardinality that allows up to 700. Which of the three statements are valid regarding the product model in this scenario?

- A. This type of modeling is not supported in EPC and modular should follow a flat modeling technique.
- B. Modeling children with large cardinalities can result in processing inefficiencies for MACD operations.
- C. Since the product model uses OOTB feature of EPC, MACD operations and decomposition are guaranteed to work well
- D. Product Model uses hierarchical modeling which is natively supports EPC
- E. Product model uses OOTB features from EPC. Decomposition may fail when the maximum number of products is processed.

**Answer: B,D,E**

### NEW QUESTION # 66

UC have completed migration into developer org. Now they are using partial copy sandbox. What are the two reasons why consultant should recommend doing a full data load in full copy sandbox before production load?

- A. To identify the risk of hitting governor limit with the production load
- B. To identify the metadata related error not previously seen with a subset of data
- C. To understand how long the data load in production should take
- D. To identify the data error that was not surfaced during testing with subset of data

**Answer: A,D**
