CompTIA Project+ Certification Exam certification is also a stepping stone to more advanced project management certifications, such as the Project Management Professional (PMP) certification.

### CompTIA Project+ Certification Exam Sample Questions (Q61-Q66):

#### NEW QUESTION # 61

A project team has just experienced an unexpected event and implemented a work-around. Which of the following documents should be used to record the event? (Select TWO).

- A. Risk report
- B. Progress report
- C. Defect log
- D. Issue log
- E. Change log
- F. Backlog

**Answer: D,E**

Explanation:

Issue log and change log are documents that should be used to record the event where the project team has just experienced an unexpected event and implemented a work-around. An issue log is a document that tracks and records any issues or problems that arise during a project and how they are resolved. An issue log can help to monitor and control the project performance and quality and prevent any negative impacts on the project objectives and deliverables. A change log is a document that tracks and records any changes or modifications that are made to the project scope, schedule, cost, quality, or resources during a project. A change log can help to document the change request, approval, implementation, and impact of each change and ensure traceability and transparency.

#### NEW QUESTION # 62

Project stakeholders have asked the team to use Scrum to run a software implementation project. Which of the following is most likely to take place during a Scrum ceremony?

- A. Defining roles and responsibilities
- B. Establishing a project schedule
- C. Reviewing project blockers
- D. Determining a project budget

**Answer: C**

Explanation:

According to Four agile ceremonies, demystified, one of the Scrum ceremonies is the daily stand-up, which is a short meeting to discuss progress and identify blockers. Blockers are any issues or impediments that prevent the team from completing their tasks or achieving their goals. Reviewing project blockers during the daily stand-up helps the team to resolve them quickly, collaborate effectively, and stay on track. The other options are not likely to take place during a Scrum ceremony, as they are either part of the initial project planning or outside the scope of Scrum.

### NEW QUESTION # 63

A project team is developing an application that will allocate a building's parking spaces. The building owner does not agree with using corporate colors in the application and has blocked the release of the beta version for testing. Which of the following best describes what the project manager should have done in the initiation phase to prevent this issue?

- A. Development of an issue log
- **B. Identification and assessment of stakeholders**
- C. Review of existing artifacts
- D. Establishment of accepted communication channels

**Answer: B**

Explanation:

The project manager should have identified and assessed the building owner as a key stakeholder in the initiation phase, and understood their expectations and requirements for the application. This would have helped to avoid the conflict over the corporate colors and the delay in testing. Stakeholder identification and assessment is an important process in the initiation phase, as it helps to define the project scope, objectives, and success criteria, and to establish a communication plan<sup>12</sup>. ### NEW QUESTION # 64

A team member identifies a critical issue in production. Which of the following should the project manager apply?

- **A. Rollback plan**
- B. Compliance check
- C. Release plan
- D. Validation check

**Answer: A**

Explanation:

A rollback plan, also known as a backout plan, is a strategy designed to reverse changes made during a project in case of failure or undesired results<sup>1</sup>. A rollback plan is a form of risk response that allows the project to restore the previous state and minimize the impact of the issue. A rollback plan is usually created during the planning phase and implemented during the execution or closing phase of the project. The other options are not correct because:

A compliance check is a process that ensures that the project meets the relevant standards, regulations, and requirements. A compliance check is not a risk response, but rather a quality control or assurance activity.

A release plan is a document that outlines the scope, schedule, and resources for delivering a product or service to the customer. A release plan is not a risk response, but rather a communication or scope management tool.

A validation check is a process that verifies that the project deliverables meet the customer's needs and expectations. A validation check is not a risk response, but rather a quality control or assurance activity. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 10:

### NEW QUESTION # 65

A project manager is in the closing phase of an IT asset refresh project that involves the disposal of several computers. The project sponsor notified the project manager that the company recently received a penalty as a result of disposing of some computers improperly. Which of the following should have been considered during initial planning to prevent this situation?

- A. PII
- B. PHI
- C. ROI
- **D. ESG**

**Answer: D**

Explanation:

### Explanation

The project manager should have considered environmental, social, and governance (ESG) factors during initial planning to prevent the situation of receiving a penalty for disposing of some computers improperly.

ESG factors are criteria that measure the sustainability and ethical impact of an organization's activities. They include aspects such as environmental protection, social responsibility, human rights, diversity, and corporate governance. Considering ESG factors can help to reduce risks, improve reputation, and enhance performance of an organization<sup>12</sup>
