

Mule-Dev-201 Study Tool, Mule-Dev-201 Dumps PDF

BTW, DOWNLOAD part of PremiumVCEDump Mule-Dev-201 dumps from Cloud Storage: https://drive.google.com/open?id=1QblC63jd3SQJ9TRMLnp_96Sk3Ps-VCe4

Our PDF version of the Mule-Dev-201 learning braindumps can print on papers and make notes. Then windows software of the Mule-Dev-201 exam questions, which needs to install on windows software. Also, the windows software is intelligent to simulate the real test environment. Then the online engine of the Mule-Dev-201 Study Materials, which is convenient for you because it doesn't need to install on computers. It supports Windows, Mac, Android, iOS and so on. This version just can run on web browser.

Salesforce Mule-Dev-201 Exam Syllabus Topics:

Section	Objectives
Topic 1: Anypoint Platform Fundamentals	- Anypoint Studio usage and project structure - Anypoint Platform components overview
Topic 2: API-led Connectivity	- API layering approach (System, Process, Experience APIs) - API reusability and governance concepts
Topic 3: Mule Application Development	- Connectors and modules usage - Flow design and message processing
Topic 4: Deployment and Operations	- Monitoring and logging - Deployment strategies (CloudHub, on-prem)
Topic 5: Error Handling and Debugging	- Error types and handling strategies - Debugging Mule applications
Topic 6: Security and Policies	- API security policies (OAuth, JWT, etc.) - Secure configuration and credentials management
Topic 7: DataWeave Transformations	- DataWeave syntax and functions - Data transformation and mapping strategies

Salesforce - Mule-Dev-201 –High Pass-Rate Study Tool

Our Mule-Dev-201 study materials are in the process of human memory, is found that the validity of the memory used by the memory method and using memory mode decision, therefore, the Mule-Dev-201 training materials in the process of examination knowledge teaching and summarizing, use for outstanding education methods with emphasis, allow the user to create a chain of memory, the knowledge is more stronger in my mind for a long time by our Mule-Dev-201 study engine.

Salesforce Certified MuleSoft Developer Sample Questions (Q139-Q144):

NEW QUESTION # 139

An API instance of type API endpoint with API proxy is created in API manager using an API specification from Anypoint Exchange. The API instance is also configured with an API proxy that is deployed and running in CloudHub.

An SLA- based policy is enabled in API manager for this API instance.

Where can an external API consumer obtain a valid client ID and client secret to successfully send requests to the API proxy?

- A. In Anypoint Studio, from components generated by APIkit for the API specification
- B. In Runtime Manager, from the properties tab of the deployed approved API proxy
- C. In Anypoint Studio, from components generated by Rest Connect for API specification
- D. In the organization's public API portal in Anypoint Exchange, from an approved client application for the API proxy

Answer: D

Explanation:

- * When a client application is registered in Anypoint Platform, a pair of credentials consisting of a client ID and clientsecret is generated.
- * When the client application requests access to an API, a contract is created between the application and that API.
- * An API that is protected with a Client ID Enforcement policy is accessible only to applications that have an approved contract.

----- In the organization's public API portal in Anypoint Exchange, from an approved client application for the API proxy

Reference: <https://docs.mulesoft.com/api-manager/2.x/client-id-based-policies>

NEW QUESTION # 140

Refer to the exhibits.

The Validation component in the Try scope throws an error.

What response message is returned to a client request to the main flow's HTTP Listener?

The Validation component in the Try scope throws an error. What response message is returned to a client request to the main flow's HTTP Listener?

- A. Error - Try scope
- B. Error - main flow
- C. Validation Error
- D. Success - main flow

Answer: D

Explanation:

Note that private flow has error scope defined as On Error Continue . So when error occurs in private flow , it is handled by this On Error Continue scopewhich sends success response back to main flow and does not throw back an error. So main continues normally and payload is set to Success - main flow.

Hence correct answer is Success - main flow

1) HTTP listener received request

2) The Flow Reference calls the child flow

3) The Is Number validator creates an Error Object because the payload isn't an integer. Child Flow execution stops

`#[error.description] = "payload is not a valid INTEGER value"`

`#[error.errorType] = VALIDATION:INVALID_NUMBER`

4) The OnError Continue handles the error The payload is set to "Error - Sub Flow"

5) "Error - Sub Flow" is returned to the main flow as if the child flow was a success. The Set Payload is executed. The payload is reset to "Success - Finished Main Flow"

6) "Success- Main Flow" is returned to the requestor in the body of the HTTP request. HTTP Status Code: 200

As you can see, in the above example, because the error was caught by an On Error Continue scope in the child flow (RED in, GREEN out) when the Mule Message returns to the parent flow, the parent flow knows none-the-different that there was a failure because the on error continue returns a 200 success message. Note that because, to the mainFlow, the childFlow appeared to succeed, the processing of mainFlow resumed after the flow reference.

A picture containing timeline Description automatically generated

The main flow contains a Flow Reference component configured to call the child flow. What part(s) of a Mule event passed to the Flow Reference component are available in the child flow?

- A. The payload and all attributes
- B. The payload
- C. The entire Mule event
- D. The payload and all variables

Answer: D

NEW QUESTION # 142

Refer to the exhibit.

All three of the condition for the Choice router are true. What log messages are written?

- A. Route 1
- B. Route1, Route2
- C. Route1, Route2, Default

- Answer: A**

The new RAML spec has been published to Anypoint Exchange with client credentials. What is the next step to gain access to the API?

- Answer: D**

Correct answer is Request access to the API in Anypoint Exchange. This way we can get clientId and Client secret which we can use to access the API
