## Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q40-Q45):

### NEW QUESTION # 40

After generating a report, you notice the information you were expecting to see is not included in it. However, you confirm that the logs are there.

- A. Increase the report utilization quota.
- **B. Test the dataset**
- **C. Check the time frame covered by the report.**
- D. Disable auto-cache.

**Answer: B,C**

Explanation:

When a generated report does not contain the expected information even though the logs are confirmed to be present, it typically indicates an issue with the report's configuration. There are a few common reasons this might happen:

Option A - Check the Time Frame Covered by the Report:

Reports are generated based on a specific time frame. If the report's time frame does not cover the period when the relevant logs were collected, those logs won't appear in the report output.

Verifying and adjusting the time frame is essential to ensure the report includes all relevant data.

Option D - Test the Dataset:

Datasets determine which logs and data fields are pulled into the report. If a dataset is configured incorrectly or does not include the required log fields, it could lead to missing information. Testing the dataset allows you to verify that it's correctly configured and pulling the expected data.

### NEW QUESTION # 41

Refer to the exhibit. What is the purpose of using the Chart Builder feature on FortiAnalyzer?

- A. To build a chart automatically based on the top 100 log entries
- B. To add charts directly to generate reports in the current ADOM.
- **C. To build a dataset and chart based on the filtered search results**
- D. To add a new chart under FortiView to be used in new reports

**Answer: C**

Explanation:

A quick way to build a custom dataset and chart is to use the chart builder tool. This tool is located in LogView, and allows you to build a dataset and chart automatically, based on your filtered search results. In LogView, set filters to return the logs you want.

#### NEW QUESTION # 42

Why must you wait for several minutes before you run a playbook that you just created?

- A. FortiAnalyzer needs that time to back up the current playbooks.
- B. FortiAnalyzer needs that time to debug the new playbook.
- C. FortiAnalyzer needs that time to ensure there are no other playbooks running.
- **D. FortiAnalyzer needs that time to parse the new playbook.**

**Answer: D**

Explanation:

When a new playbook is created on FortiAnalyzer, the system requires some time to parse and validate the playbook before it can be executed. Parsing involves checking the playbook's structure, ensuring that all syntax and logic are correct, and preparing the playbook for execution within FortiAnalyzer's automation engine. This initial parsing step is necessary for FortiAnalyzer to load the playbook into its operational environment correctly.

#### NEW QUESTION # 43

Which two statements about local logs on FortiAnalyzer are true? (Choose two.)

- **A. You can view playbook logs for all ADOMs in the root ADOM.**
- B. They are not supported in FortiView.
- **C. Event logs show system-wide information, whereas application logs are ADOM specific.**
- D. Event logs are available only in the root ADOM.

**Answer: A,C**

Explanation:

Playbook logs, which relate to automated incident response actions, can be viewed centrally in the root ADOM, allowing visibility across all ADOMs.

Event logs on FortiAnalyzer typically provide system-wide information applicable to the entire FortiAnalyzer unit, while application logs are specific to each ADOM, reflecting the logs related to devices and activities managed within that ADOM.

#### NEW QUESTION # 44

When generating reports on FortiAnalyzer, macros can be used to include additional data. Which two statements about macros are true? (Choose two.)

- A. Macros cannot be customized
- B. Macros are supported in FortiGate ADOMs only
- **C. Macros are abbreviated dataset queries**
- **D. Macros do not need to be associated with a chart**

**Answer: C,D**
