Pass Guaranteed Quiz International Code Council - Fire-Inspector-II Latest Braindumps Downloads

If candidates are going to buy Fire-Inspector-II test dumps, they may consider the problem of the fund safety. If you are thinking the same question like this, our company will eradicate your worries. We choose the international third party to ensure the safety of the fund. The Fire-Inspector-II Test Dumps are effective and conclusive, you just need to use the least time to pass it. If you choose us, it means you choose the pass.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

The use of listed portable unvented oil-burning heating appliances is prohibited in which of the following occupancies?

- A. Groups R-3, M, S-1, and S-2 occupancies
- B. Groups B and F occupancies
- C. Groups A and B occupancies
- **D. Groups A, E, I, R-1, R-2, R-3, and R-4 occupancies**

Answer: D

Explanation:

Restrictions on Portable Unvented Oil-Burning Heaters

According to the International Fire Code (IFC) 2021, Section 603.4, the use of listed portable unvented oil-burning heating appliances is prohibited in certain occupancies where fire and life safety risks are higher.

The prohibited occupancies include:

Group A (Assembly) - Includes theaters, churches, stadiums, etc.

Group E (Educational) - Includes schools, daycares, etc.

Group I (Institutional) - Includes hospitals, nursing homes, jails, etc.

Group R-1, R-2, R-3, R-4 (Residential Occupancies) - Includes hotels, apartments, assisted living, and residential care facilities.

2. Why These Occupancies Are Prohibited

Portable unvented oil-burning heaters pose a significant fire hazard and can produce harmful gases such as carbon monoxide.

In high-occupancy and residential buildings, improper use or malfunction of these heaters could lead to fatal fire or health hazards.

Ventilation concerns in institutional and assembly settings make these heaters particularly dangerous.

3. Verification of Other Options

Option A (Groups A and B occupancies) - Incorrect, as Group B (Business) is not explicitly prohibited from using these heaters.

Option B (Groups B and F occupancies) - Incorrect, as Group F (Factory/Industrial) is not listed under IFC

603.4 as a prohibited occupancy.

Option C (Groups R-3, M, S-1, and S-2 occupancies) - Incorrect, as M (Mercantile) and S (Storage) occupancies are not listed as restricted areas.

International Fire Code (IFC) 2021 - Section 603.4 (Portable Unvented Oil-Burning Heating Appliances) NFPA 1: Fire Code (Portable Heater Use Restrictions in Various Occupancies)

NEW QUESTION # 15

Quantities of flammable liquid storage in a control area of an S Occupancy may be doubled when:

- A. the control area is provided with exhaust ventilation in accordance with fire code requirements.
- B. the control area exceeds 50,000 sq. ft.
- C. the building is protected with automatic sprinklers.
- D. permission is granted by the chief.

Answer: C

Explanation:

The storage of flammable liquids in control areas within an S Occupancy (Storage Occupancy) is governed by the 2021 International Fire Code (IFC), Section 5003 - Hazardous Materials, and Table 5003.1.1(1).

IFC Section 5003.1.1(1) - Maximum Allowable Quantity (MAQ) Adjustments:

The maximum allowable quantity (MAQ) of flammable liquids in a control area may be doubled if an approved automatic sprinkler system is installed throughout the building.

Why Other Options Are Incorrect?

A). Permission is granted by the chief.

Fire officials can enforce code requirements but do not have the authority to override MAQ limits unless explicitly allowed in the code.

B). The control area exceeds 50,000 sq. ft.

The code does not specify an increase based solely on size; the sprinkler system is the determining factor.

D). The control area is provided with exhaust ventilation in accordance with fire code requirements.

While ventilation is important for hazardous material safety, it does not allow for an increase in the maximum storage quantity.

Correct answer: C. The building is protected with automatic sprinklers.

NEW QUESTION # 16

Panic hardware is required on exit doors serving an occupant load of ___ or more in a Group ___ Occupancy

- A. 50; M
- B. 10; A
- C. 100; F
- D. 50; A

Answer: D

Explanation:

The requirement for panic hardware on exit doors is specified in 2021 IFC Section 1010.2.9 - Panic and Fire Exit Hardware.

IFC Section 1010.2.9.1 - Where Panic Hardware is Required:

Panic hardware is required for Group A (Assembly) occupancies when the occupant load is 50 or more.

It is also required in certain Group E (Educational) and Group R-1 (Hotels and Dormitories) occupancies under specific conditions. Why Other Options Are Incorrect?

A: 10; A - The threshold for panic hardware in Group A occupancies is 50, not 10.

C: 50; M - Group M (Mercantile) does not require panic hardware unless specifically required by another section of the code.

D: 100; F - Panic hardware is not required in Group F (Factory) occupancies at 100 occupants; the threshold applies primarily to Group A.

NEW QUESTION # 17

What fire-resistance rating is required for interior nonbearing wall and partitions in Type IV construction?

- A. 1-1/2 hours
- **B. 0 hours**
- C. 2 hours
- D. 1 hour

Answer: B

Explanation:

The fire-resistance rating requirements for different building elements in Type IV (Heavy Timber) construction are specified in the 2021 International Building Code (IBC), Table 601 - Fire-Resistance Rating Requirements for Building Elements (Hours).

IBC Table 601 - Fire Resistance for Type IV Construction:

Interior nonbearing walls and partitions in Type IV construction require 0 hours of fire resistance.

This is because Type IV construction primarily relies on large, heavy timber elements that provide inherent fire resistance.

Why Other Options Are Incorrect?

B). 1 hour - Incorrect, as nonbearing interior walls in Type IV construction are not required to have a fire-resistance rating.

C). 1-1/2 hours - Not required by code.

D). 2 hours - Only structural elements like exterior walls in some cases may require fire resistance, but nonbearing interior partitions do not.

Correct answer: A. 0 hours

NEW QUESTION # 18

A "control area" is defined by the fire code as a building or portion of a building within which the exempted amounts of ___ are allowed to be stored, dispensed, used, or handled.

- A. corrosive materials only
- B. combustible liquids only
- C. flammable liquids only
- **D. hazardous materials**

Answer: D

Explanation:

Definition of a Control Area

According to the International Fire Code (IFC) 2021, Section 202 (Definitions) and Section 5003.8.2 (Control Areas), a control area is a building or portion of a building where specific amounts of hazardous materials can be stored, dispensed, used, or handled without requiring additional fire protection features.

The purpose of a control area is to limit the risk associated with hazardous materials while still allowing their use in limited quantities.

2. Why Hazardous Materials is the Correct Answer

Control areas apply to a wide range of hazardous materials, including flammable, combustible, corrosive, toxic, and oxidizing substances.

The amount of each hazardous material that can be stored in a control area is regulated by IFC Table 5003.1.1 (1).

3. Verification of Other Options

Option B (flammable liquids only) - Incorrect, because control areas allow multiple types of hazardous materials, not just flammable liquids.

Option C (combustible liquids only) - Incorrect, as combustible liquids are just one category of hazardous materials.

Option D (corrosive materials only) - Incorrect, since control areas are not limited to corrosive materials but include all types of hazardous materials.

Reference Sources:

International Fire Code (IFC) 2021 - Section 202 (Definitions of Control Area) IFC 2021 - Section 5003.8.2 (Control Areas and

NEW QUESTION # 19

.....

To do this you just need to pass Fire-Inspector-II exam, which is quite challenging and demands thorough 67 - Fire Inspector II Exam (Fire-Inspector-II) exam preparation. For the complete, comprehensive and quick Fire-Inspector-II Exam Preparation, the PassTestking Fire-Inspector-II Dumps questions are ideal. You should not ignore it and must try PassTestking Fire-Inspector-II exam questions for preparation today.
