We have online and offline chat service. If you have any questions about 302 exam materials, you can contact us, and we will give you reply as soon as possible.

F5 BIG-IP DNS Specialist Sample Questions (Q299-Q304):

NEW QUESTION # 299

What is the importance of the "TXT" Record ?

- A. It allows the System admin to enter a specific Text record inside the DNS System
- B. It allows the System admin to test the DHCP System
- C. It allows the System admin to test the DNS System

Answer: A

Explanation:

The "TXT" record in DNS stands for text record and allows the system administrator to enter specific text information into the DNS system. This text can be used for various purposes such as verifying domain ownership for services like email authentication, providing additional information about the domain, or setting up SPF records for email security.

F5 GTM concept

NEW QUESTION # 300

True or false

The Product License

Is one of the configuration components that UCS Contains by default ?

- A. False
- **B. True**

Answer: B

Explanation:

True. The Product License is indeed one of the configuration components that UCS Contains by default. It is essential for managing and validating the licenses for F5 products and services within the UCS framework.

Domain

Archiving

NEW QUESTION # 301

What is the main tasks of the gtm agent in the F5 GTM SYSTEM ?

- A. Is to use iQuery to communicate with big2d in the local F5 GTM System
- **B. Is to use iQuery to communicate with the remote big3d on the other BIGIP Systems**
- **C. Is to use iQuery to communicate with the local big3d in the local F5 GTM System**
- D. None

Answer: B,C

Explanation:

The main task of the gtm agent in the F5 GTM System is to use iQuery to communicate with the local big3d in the local F5 GTM System. This communication is essential for exchanging information and coordinating the functions of the GTM system within the local environment.

The gtm agent in the F5 GTM System is responsible for using iQuery to communicate with the remote big3d on the other BIG-IP Systems. This communication is crucial for ensuring seamless coordination and synchronization of data and configurations across multiple BIG-IP Systems in a distributed environment.

iQuery

NEW QUESTION # 302

What is the topology record "Order and weight" Builder components ?

- A. Is the Order and Weight of the client
- **B. Is the Order and Weight of the Record**

Answer: B

Explanation:

The "Order and Weight" in the topology record refers to the priority and load balancing weight assigned to a specific resource or server. This information helps the Global Traffic Manager (GTM) to determine the order in which requests should be directed and how the load should be distributed among the available resources. It is a crucial component in building a robust and efficient load balancing configuration.

NEW QUESTION # 303

What are the main drawbacks of the Synchronization / iQuery Connection issues ?

- A. The Log messages will report different issues related to Synchronization and the iQuery Connections
- B. There are differences in the configuration among the Synchronization Group members
- C. The Server Configuration objects and components will be marked as red or blue There is no Drawbacks The Client will shutdown
- D. The Server Configuration objects and components will be marked as unavailable or unknown

Answer: A,B,C,D

Explanation:

When there are differences in the configuration among the Synchronization Group members, it can lead to inconsistencies and errors in the synchronization process, causing issues with data consistency and reliability.

Log messages reporting different issues related to Synchronization and iQuery Connections indicate that there are communication problems and potential failures in the synchronization process, which can impact the overall performance and reliability of the system. When Server Configuration objects and components are marked as unavailable or unknown due to Synchronization or iQuery Connection issues, it can result in service disruptions, data loss, and operational inefficiencies, affecting the overall functionality of the system.

If Server Configuration objects and components are marked as red or blue due to Synchronization or iQuery Connection issues, it signifies critical errors or failures in the synchronization process, potentially leading to service outages and data inconsistencies.
