Pass Guaranteed Nutanix - Efficient NCP-EUC - Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Test Papers

Nutanix study material is designed to enhance your personal ability and professional skills to solve the actual problem. NCP-EUC exam certification will be the most important one. There are many study material online for you to choose. While, the NCP-EUC exam dumps provided by Prep4cram site will be the best valid training material for you. NCP-EUC study pdf contains the questions which are all from the original question pool, together with verified answers. Besides, the explanations are very detail and helpful after the NCP-EUC questions where is needed. You can pass your test at first try with our NCP-EUC training pdf.

Prep4cram delivers up to date NCP-EUC exam products and modify them time to time. Latest NCP-EUC exam questions are assembled in our practice test modernizes your way of learning and replaces the burdensome preparation techniques with flexible learning. We accord you an actual exam environment simulated through our practice test sessions that proves beneficial for NCP-EUC Exams preparation. Our NCP-EUC practice tests provide you knowledge and confidence simultaneously. Candidates who run across the extensive search, Prep4cram products are the remedy for their worries. Once you have chosen for our NCP-EUC practice test products, no more resources are required for exam preparation.

Valid NCP-EUC Test Sample - NCP-EUC Exam Duration

Our NCP-EUC exam torrent is compiled by experts and approved by experienced professionals and updated according to the development situation in the theory and the practice. Our Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam guide torrent can simulate the exam and boosts the timing function. The language is easy to be understood and makes the learners have no learning obstacles. So our NCP-EUC Exam Torrent can help you pass the exam with high possibility.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q168-Q173):

NEW QUESTION # 168
An administrator is asked to configure storage to support four pools of 250 persistent full clone desktops, and an additional five pools of 200 non-persistent desktops.
What is the optimal configuration for this?

- A. One container with Compression, Deduplication, and Erasure Coding
- B. Five containers with compression and deduplication and four with compression only
- C. One container with compression only and one with compression and deduplication
- D. Nine containers with Compression Only

Answer: C

Explanation:
The optimal storage configuration aligns the container settings with the specific I/O patterns of the workload types:
* Non-Persistent Desktops: These are typically linked clones (MCS/Instant Clones) with high write churn and little data commonality in the delta disks. Compression Only is best. Deduplication adds overhead with no benefit.
* Persistent Full Clones: These are full copies of the OS. Because there are hundreds of copies of the same OS files, Deduplication (Capacity or Performance tier) is highly effective at saving space.
Compression is always recommended.
Therefore, creating two separate containers-one configured with Compression Only (for the non- persistent pools) and one with Compression and Deduplication (for the persistent full clone pools)- provides the best balance of performance and capacity efficiency (Option D).

NEW QUESTION # 169
What are the two types Of Launchpads that exist in Frame? (Choose two.)

- A. user Launchpad
- B. VDI Launchpad
- C. Desktop Launchpad
- D. Application Launchpad

Answer: C,D

Explanation:
There are two types of Launchpads that exist in Frame: Application Launchpad and Desktop Launchpad2.
An Application Launchpad is a representation of the applications that are available for streaming.
Users can launch any application they have access to from this Launchpad. An example of an Application Launchpad is shown below:
A Desktop Launchpad is a representation of the desktops that are available for streaming. Users can launch any desktop they have access to from this Launchpad. An example of a Desktop Launchpad is shown below:

NEW QUESTION # 170
Refer to the exhibit.

Infrastructure ▼

Images | List | Policies ▾

Add Image   **Import Image**   Actions ▾

☆ ▾   Name contains 'Windows-11' ✕

1 selected out of 3 filtered Images

☑ Name ▴

☑ Windows-11

☐ Windows-11-7.25.2025-CL

☐ Windows-11_7.23.2025
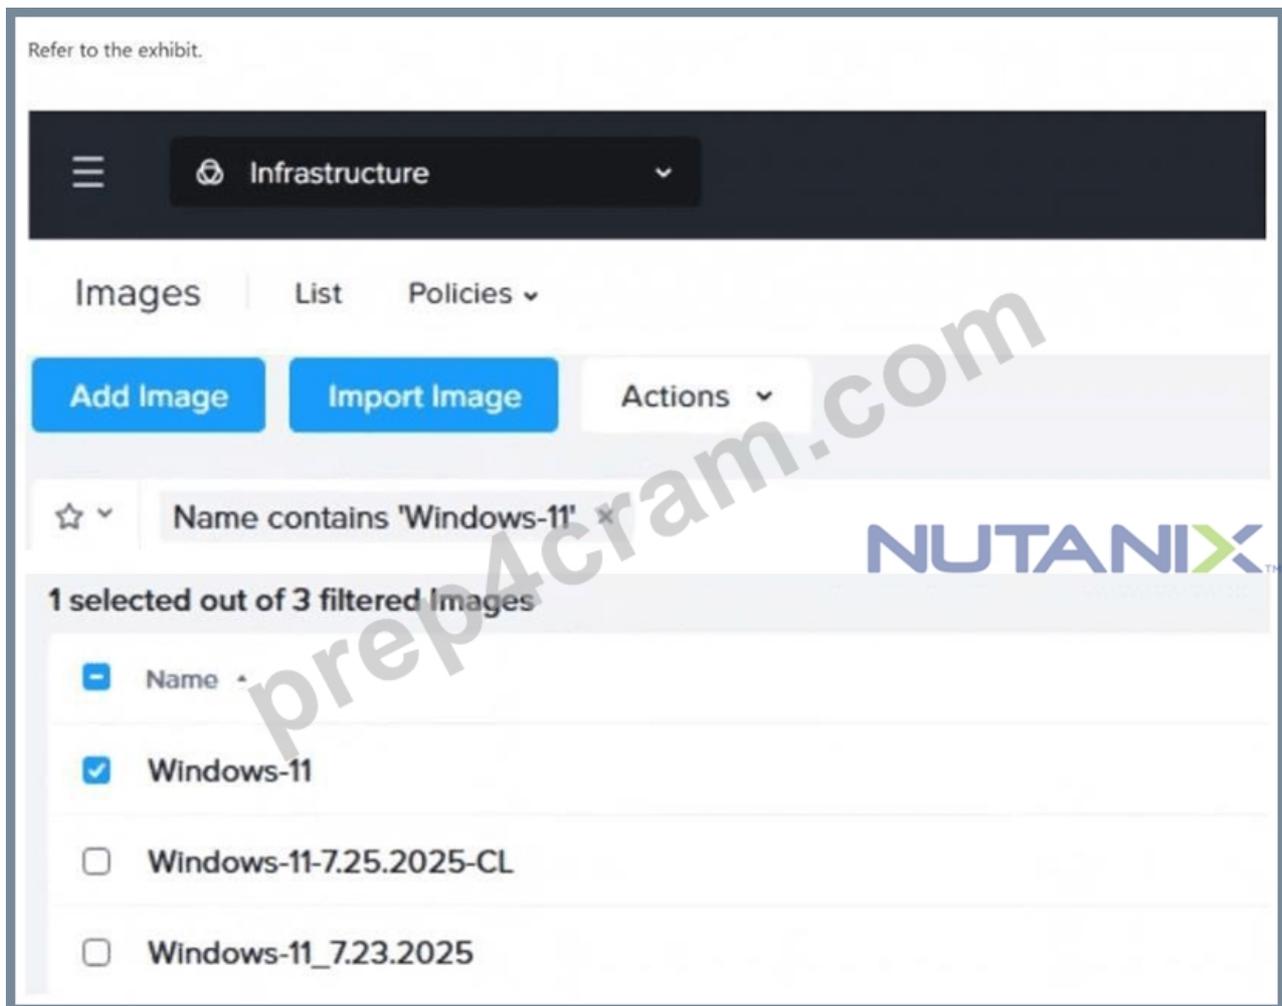

An administrator needs to update an image name to adhere to company image naming standards.
Based upon the exhibit, which option describes the correct solution?

- A. Image names must be updated via the acli command, not the UI.
- B. Select the Image -> click Actions -> Clone to New Image.
- C. Select the Image -> click Actions -> Update.
- D. Image names must be updated via the ncli command, not the UI.

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:
Based on the provided exhibit and Nutanix Prism Central administration guides:
* Interface Identification: The screenshot displays the Prism Central web console, indicated by the " Infrastructure" dropdown menu in the top navigation bar (Prism Element uses a different layout). The user is currently in the Images dashboard (Infrastructure > Compute > Images).
* Updating Image Metadata: To rename an image (or modify its description/type) in Prism Central, the standard workflow is to select the target image (as shown with "Windows-11" selected) and use the Actions menu.
* The "Update" Action: Within the Actions dropdown menu, the correct option to modify existing settings is Update. Clicking Actions -> Update opens the "Update Image" dialog box, where the Name field is editable.
* Incorrect Options:
* A & D (CLI): These are incorrect because image renaming is fully supported in the UI; the CLI (acli or ncli) is available but not mandatory ("must" is the error).
* C (Clone): Cloning an image creates a duplicate copy. While this could result in a new image with a new name, it is an inefficient workaround rather than the direct solution for simply renaming an existing image.

NEW QUESTION # 171
Recently, the vice president Of IT infrastructure was migrated from a physical computer to a virtual desktop. The administrator

wants to ensure that this user has the best possible experience and wants to be notified if any CPU resource constraints. The cluster's average CPU utilization is 20%.
What step would help the administrator to know when there are resource problems on the virtual desktop?

- A. Create a new alert policy to alert if the CPU on the virtual desktop's cluster is over 90%.
- B. Create a new alert policy to alert if the CPU on the virtual desktop is over and configure a Playbook to Slack the information to the administrator,
- C. Create a new alert policy to alert if the CPU on the virtual desktop is over and configure a Playbook to power off the virtual desktop.
- D. Create a new alert policy to alert if the CPU on the virtual desktop's host is over 90%.

Answer: B

Explanation:
alert policies are rules that define the conditions for generating alerts on Nutanix clusters1. You can create custom alert policies based on your specific needs and preferences2Playbooks are automated workflows that perform actions based on triggers such as alerts3. You can create playbooks using predefined alerts or alerts matching criteria3.
To ensure that the vice president of IT infrastructure has the best possible experience and to be notified if any CPU resource constraints on the virtual desktop, one possible solution is to create a new alert policy to alert if the CPU on the virtual desktop is over a certain threshold (for example, 80%) and configure a playbook to send a notification (for example, via email or Slack) to the administrator23. This way, the administrator can monitor the performance of the virtual desktop and take appropriate actions if needed.
https://portal.nutanix.com/page/documents/details?targetId=Prism-Central-Guide-vpc_2022_6:mul-alert-policies-customize-system-pc-t.html

NEW QUESTION # 172
An administrator has configured three web servers that are used to access VDIs. One of the cluster nodes has become unresponsive and users can no longer reach a web server VM to access their VDI. What should the administrator configure to avoid this issue in the future?

- A. Create an Isolation Policy.
- B. Create a Protection Policy.
- C. Create Anti-Affinity rules.
- D. Create Affinity rules.

Answer: C

Explanation:
To ensure high availability for distributed applications such as load-balanced web servers, Nutanix AHV allows administrators to configure Anti-Affinity rules.
An Anti-Affinity rule specifies that a group of virtual machines should never run on the same AHV host simultaneously. By applying an Anti-Affinity rule to the three web server VMs, the Acropolis Scheduler ensures they are distributed across different physical nodes in the cluster.
In the scenario described, the web servers likely resided on the same host (or the failing host held the only active instance). If Anti-Affinity rules had been configured, the other web server VMs would have been running on healthy hosts, ensuring continued user access to the VDI environment despite the single node failure.

NEW QUESTION # 173
......

To do this the Nutanix NCP-EUC certification exam candidates can stay updated and competitive and get a better career opportunity in the highly competitive market. So we can say that with Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam NCP-EUC certificate you can not only validate your expertise but also put your career on the right track.
