TestInsides provides actual to help candidates pass on the first try, ultimately saving them time and resources. These questions are of the highest quality, ensuring success for those who use them. To achieve success, it's crucial to have access to quality Salesforce Data-Cloud-Consultant Exam Dumps and to prepare for the likely questions that will appear on the exam. TestInsides helps candidates overcome any difficulties they may face in exam preparation, with a 24/7 support team ready to assist with any issues that may arise.

Salesforce Data-Cloud-Consultant Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Cloud Overview: This topic covers Data Cloud's function, key terminology, business value, typical use cases, the Data Cloud lifecycle, dependencies, and principles of data ethics. These sub-topics provide an overview of Data Cloud's capabilities and applications.
Topic 2	<ul style="list-style-type: none">• Act on Data: This topic defines activations and their basic use cases, using attributes and related attributes, identifying and analyzing timing dependencies affecting the Data Cloud lifecycle. Additionally it focuses on troubleshooting common problems with activations, and using data actions, including their requirements and intended use cases.
Topic 3	<ul style="list-style-type: none">• Segmentation and Insights: This topic defines basic concepts of segmentation and use cases, identifies scenarios for analyzing segment membership, configuring, refining, and maintaining segments within Data Cloud, and differentiating between calculated and streaming insights.

Latest Data-Cloud-Consultant Study Materials - Win Your Salesforce Certificate with Top Score

After you pass the test Data-Cloud-Consultant certification, your working abilities will be recognized by the society and you will find a good job. If you master our Data-Cloud-Consultant quiz torrent and pass the exam. You will be respected by your colleagues, your boss, your relatives, your friends and the society. All in all, buying our Data-Cloud-Consultant Test Prep can not only help you pass the exam but also help realize your dream about your career and your future. So don't be hesitated to buy our Data-Cloud-Consultant exam materials and take action immediately.

Salesforce Certified Data Cloud Consultant Sample Questions (Q41-Q46):

NEW QUESTION # 41

A Data Cloud consultant recently added a new data source and mapped some of the data to a new custom data model object (DMO) that they want to use for creating segments. However, they cannot view the newly created DMO when trying to create a new segment.

What is the cause of this issue?

- A. Data has not yet been ingested into the DMO.
- B. Segmentation is only supported for the Individual and Unified Individual DMOs.
- C. The new DMO is not of category Profile.
- D. The new DMO does not have a relationship to the individual DMO

Answer: C

Explanation:

The cause of this issue is that the new custom data model object (DMO) is not of category Profile. A category is a property of a DMO that defines its purpose and functionality in Data Cloud. There are three categories of DMOs: Profile, Event, and Other. Profile DMOs are used to store attributes of individuals or entities, such as name, email, address, etc. Event DMOs are used to store actions or interactions of individuals or entities, such as purchases, clicks, visits, etc. Other DMOs are used to store any other type of data that does not fit into the Profile or Event categories, such as products, locations, categories, etc. Only Profile DMOs can be used for creating segments in Data Cloud, as segments are based on the attributes of individuals or entities.

Therefore, if the new custom DMO is not of category Profile, it will not appear in the segmentation canvas.

The other options are not correct because they are not the cause of this issue. Data ingestion is not a prerequisite for creating segments, as segments can be created based on the data model schema without actual data. The new DMO does not need to have a relationship to the individual DMO, as segments can be created based on any Profile DMO, regardless of its relationship to other DMOs. Segmentation is not only supported for the Individual and Unified Individual DMOs, as segments can be created based on any Profile DMO, including custom ones. NEW QUESTION # 42

A user is not seeing suggested values from newly-modeled data when building a segment.

What is causing this issue?

- A. Value suggestion requires Data Aware Specialist permissions at a minimum
- B. Value suggestion will only return result for the first 50 values of a specific attribute.
- C. Value suggestion can only work on direct attributes and not related attributes.
- D. Value suggestion is still processing and to be available.

Answer: D

Explanation:

Explanation

Value suggestion is a feature that allows users to see suggested values for data model object (DMO) fields when creating segment filters. However, this feature can take up to 24 hours to process and display the values for newly-modeled data. Therefore, if a user is not seeing suggested values from newly-modeled data, it is likely that the value suggestion is still processing and will be available soon. The other options are incorrect because value suggestion does not require any specific permissions, can work on both direct

and related attributes, and can return more than 50 values for a specific attribute, depending on the data type and frequency of the values. References: Use Value Suggestions in Segmentation, Data Cloud Limits and Guidelines

NEW QUESTION # 43

A consultant is connecting sales order data to Data Cloud and considers whether to use the Profile, Engagement, or Other categories to map the DLO. The consultant chooses to map the DLO called Order-Headers to the Sales Order DMO using the Engagement category.

What is the impact of this action on future mappings?

- A. Sales Order DMO gets assigned to both the Profile and Engagement categories when mapping a Profile DLO.
- B. A DLO with category Engagement can be mapped to any DMO using either Profile, Engagement, or Other categories.
- C. When mapping a Profile DLO to the Sales Order DMO, the category gets updated to Profile.
- **D. Only Engagement category DLOs can be mapped to the Sales Order DMO. Sales Order gets assigned to the Engagement Category.**

Answer: D

Explanation:

* Data Lake Objects (DLOs) and Data Model Objects (DMOs): In Salesforce Data Cloud, DLOs are mapped to DMOs to organize and structure data. Categories like Profile, Engagement, and Other define how these mappings are used.

* Engagement Category: Mapping a DLO to the Engagement category indicates that the data is related to customer interactions and activities.

* Impact on Future Mappings:

Engagement Category Restriction: When a DLO like Order-Headers is mapped to the Sales Order DMO under the Engagement category, future mappings of the Sales Order DMO are restricted to Engagement category DLOs.

Category Assignment: The Sales Order DMO is assigned to the Engagement category, meaning only DLOs categorized as Engagement can be mapped to it in the future.

* Benefits:

Consistency: Ensures consistent data categorization and usage, aligning data with its intended purpose.

Accuracy: Helps in maintaining the integrity of data mapping and ensures that engagement-related data is accurately captured and utilized.

NEW QUESTION # 44

Every day, Northern Trail Outfitters uploads a summary of the last 24 hours of store transactions to a new file in an Amazon S3 bucket, and files older than seven days are automatically deleted. Each file contains a timestamp in a standardized naming convention.

Which two options should a consultant configure when ingesting this data stream?

Choose 2 answers

- **A. Ensure the filename contains a wildcard to accommodate the timestamp.**
- B. Ensure that deletion of old files is enabled.
- C. Ensure the refresh mode is set to "Full Refresh."
- **D. Ensure the refresh mode is set to "Upsert".**

Answer: A,D

Explanation:

Explanation

When ingesting data from an Amazon S3 bucket, the consultant should configure the following options:

* The refresh mode should be set to "Upsert", which means that new and updated records will be added or updated in Data Cloud, while existing records will be preserved. This ensures that the data is always up to date and consistent with the source.

* The filename should contain a wildcard to accommodate the timestamp, which means that the file name pattern should include a variable part that matches the timestamp format. For example, if the file name is store_transactions_2023-12-18.csv, the wildcard could be store_transactions_*.csv. This ensures that the ingestion process can identify and process the correct file every day.

The other options are not necessary or relevant for this scenario:

* Deletion of old files is a feature of the Amazon S3 bucket, not the Data Cloud ingestion process. Data Cloud does not delete any

files from the source, nor does it require the source files to be deleted after ingestion.

* Full Refresh is a refresh mode that deletes all existing records in Data Cloud and replaces them with the records from the source file. This is not suitable for this scenario, as it would result in data loss and inconsistency, especially if the source file only contains the summary of the last 24 hours of

* transactions. References: Ingest Data from Amazon S3, Refresh Modes

NEW QUESTION # 45

A consultant is troubleshooting a segment error.

Which error message is solved by using calculated insights instead of nested segments?

- **A. Segment is too complex.**
- B. Segment population count failed.
- C. Multiple population counts are in progress.
- D. Segment can't be published.

Answer: A

Explanation:

Segment Errors in Data Cloud: Segments in Salesforce Data Cloud can encounter errors due to various reasons, including complexity and nested segments.

Calculated Insights vs. Nested Segments:

* Complex Segments: If a segment is too complex due to extensive nesting or numerous conditions, it can lead to errors.

* Simplification with Calculated Insights: Using calculated insights can simplify segment creation by pre-computing and storing complex logic or aggregations, which can then be referenced directly in the segment.

Solution:

* Step 1: Identify the segment causing the "Segment is too complex" error.

* Step 2: Break down complex logic into calculated insights.

* Step 3: Use these calculated insights in segment definitions to reduce complexity.
