

# New H35-211\_V2.5 Cram Materials - H35-211\_V2.5 Guaranteed Success

The HCIP-Access V2.5 (H35-211\_V2.5) is one of the popular exams of H35-211\_V2.5. It is designed for Huawei aspirants who want to earn the HCIP-Access V2.5 (H35-211\_V2.5) certification and validate their skills. The H35-211\_V2.5 test is not an easy exam to crack. It requires dedication and a lot of hard work. You need to prepare well to clear the H35-211\_V2.5 test on the first attempt. One of the best ways to prepare successfully for the H35-211\_V2.5 examination in a short time is using real Huawei H35-211\_V2.5 Exam Dumps.

After taking a bird's eye view of applicants' issues, DumpsActual has decided to provide them with the Real H35-211\_V2.5 Questions. These HCIP-Access V2.5 (H35-211\_V2.5) dumps pdf is according to the new and updated syllabus so they can prepare for Huawei certification anywhere, anytime, with ease. A team of professionals has made the product of DumpsActual after much hard work with their complete potential so the candidates can prepare for Huawei practice test in a short time.

## Free H35-211\_V2.5 dumps torrent & Huawei H35-211\_V2.5 exam prep & H35-211\_V2.5 examcollection braindumps

Our H35-211\_V2.5 exam questions have three versions: the PDF, Software and APP online. Also, there will have no extra restrictions to your learning because different versions have different merits. All in all, you will not be forced to buy all versions of our H35-211\_V2.5 Study Materials. You have the final right to select. Please consider our H35-211\_V2.5 learning quiz carefully and you will get a beautiful future with its help.

### Huawei HCIP-Access V2.5 Sample Questions (Q54-Q59):

#### NEW QUESTION # 54

If a rogue ONU exists on a PON port of the OLT and has gone online, another ONT or all ONTs connected to the same PON port may go offline or go online and offline frequently.

- A. TRUE
- B. FALSE

Answer: A

#### NEW QUESTION # 55

Which of the following options can improve the service experience of multicast users when switching channels (shorter switching

time)?

- A. When adding a multicast program, disable the pre-join feature
- B. Use group addresses with small values
- **C. Enable Quick (Fast) Leave when adding a multicast user**
- D. When you add a multicast user, enable the preview feature

**Answer: C**

Explanation:

In IPTV/multicast access scenarios, channel zapping delay is heavily influenced by how fast the network stops forwarding the previous channel's stream after a user switches. Huawei documents the IGMP Fast Leave /Prompt Leave feature, which enables the access device to immediately prune the old multicast group on receipt of a Leave (without waiting for group-specific queries and timers), thereby reducing the channel change delay and improving perceived switching speed. Option A explicitly disables a helpful pre-join optimization, which would worsen experience; Option C (preview) concerns showing brief previews and is not a primary mechanism for shortening zapping time; Option D is unrelated to performance. Thus, enabling Quick/Fast Leave is the correct action to shorten switching time.

#### NEW QUESTION # 56

The (radio) OLT is configured for V2 on the IGMP version when the OLT receives igmp v3 forwarded from on-T What kind of treatment will be done after joining the message

- A. Normal forwarding
- B. Send a specific group query message
- **C. Discard directly**
- D. Send a universal group query message

**Answer: C**

#### NEW QUESTION # 57

(Multi-select) Query ppPoE simulation results on the MDU side as follows  
From the query results, it can be judged ()

- **A. PPPoE user account and authentication method are correct**
- B. The MDU management IP is configured correctly
- **C. The service configuration of ppPoE users is normal**
- **D. The link between MDU tone setting and BRAS is ok**

**Answer: A,C,D**

#### NEW QUESTION # 58

(Single choice) The following statement about defending MAC Spoofing is wrong:

- A. After the Anti-MAC-Spoofing function is enabled, the system automatically implements dynamic binding of the MAC address to the service flow
- B. MAC Anti-MAC-Spoofing features are mutually exclusive with WMAC, SC, PPPoE-SMAC features at the VLAN level
- C. After enabling the Anti-MAC-Spoofing function, for IPoE users using fixed IP, the user needs to be statically configured
- **D. Turning off the Anti-MAC-Spoofing function can only remove the fixed table items, which does not affect the user's service application, but the service forwarding plane will be interrupted**

**Answer: D**

Explanation:

Huawei Anti-MAC-Spoofing binds the source MAC to the service flow/port to prevent address forgery. It is functionally exclusive with certain per-VLAN MAC check features (e.g., WMAC, SC, PPPoE-SMAC) to avoid conflicting validation logic. For IPoE users with fixed IP, operators typically configure static bindings /entries so that address and access policies remain consistent.

Option D is wrong: disabling Anti-MAC-Spoofing and removing fixed entries can affect service behavior; if forwarding is

interrupted, that does impact user service-so the statement is self-contradictory and incorrect.
