

SSE-Engineer Reliable Braindumps Ebook | Latest SSE-Engineer Exam Pattern

What's more, part of that ActualPDF SSE-Engineer dumps now are free: <https://drive.google.com/open?id=1w0Pgp6WRH-eq-M4W0A-cjFrhOQjisu3v>

We provide a guarantee on all of our SSE-Engineer test products, and you will be able to get your money back if we fail to deliver the results as advertised. We provide 100% money back guarantee for all of us SSE-Engineer test questions products, and we are always available to provide you top notch support and new SSE-Engineer Questions. If you are facing issues in downloading the SSE-Engineer study guides, then all you have to do is to contact our support professional, and they will be able to help you out with SSE-Engineer answers.

Palo Alto Networks SSE-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Prisma Access Administration and Operation: This section of the exam measures the skills of IT Operations Managers and focuses on managing Prisma Access using Panorama and Strata Cloud Manager. It tests knowledge of multitenancy, access control, configuration, and version management, and log reporting. Candidates should be familiar with releasing upgrades and leveraging SCM tools like Copilot. The section also evaluates the deployment of the Strata Logging Service and its integration with Panorama and SCM, log forwarding configurations, and best practice assessments to maintain security posture and compliance.

Topic 2	<ul style="list-style-type: none"> • Prisma Access Planning and Deployment: This section of the exam measures the skills of Network Security Engineers and covers foundational knowledge and deployment skills related to Prisma Access architecture. Candidates must understand key components such as security processing nodes, IP addressing, DNS, and compute locations. It evaluates routing mechanisms including routing preferences, backbone routing, and traffic steering. The section also focuses on deploying Prisma Access service infrastructure for mobile users using VPN clients or explicit proxy and configuring remote networks. Additional topics include enabling private application access using service connections, Colo-Connect, and ZTNA connectors, implementing identity authentication methods like SAML, Kerberos, and LDAP, and deploying Prisma Access Browser for secure user access.
Topic 3	<ul style="list-style-type: none"> • Prisma Access Troubleshooting: This section of the exam measures the skills of Technical Support Engineers and covers the monitoring and troubleshooting of Prisma Access environments. It includes the use of Prisma Access Activity Insights, real-time alerting, and a Command Center for visibility. Candidates are expected to troubleshoot connectivity issues for mobile users, remote networks, service connections, and ZTNA connectors. It also focuses on resolving traffic enforcement problems including security policies, HIP enforcement, User-ID mismatches, and split tunneling performance issues.
Topic 4	<ul style="list-style-type: none"> • Prisma Access Services: This section of the exam measures the skills of Cloud Security Architects and covers advanced features within Prisma Access. Candidates are assessed on how to configure and implement enhancements like App Acceleration, traffic replication, IoT security, and privileged remote access. It also includes implementing SaaS security and setting up effective policies related to security, decryption, and QoS. The section further evaluates how to create and manage user-based policies using tools like the Cloud Identity Engine and User ID for proper identity mapping and authentication.

100% Pass Quiz Palo Alto Networks - SSE-Engineer –Reliable Reliable Braindumps Ebook

We will give you full refund if you fail to pass the exam after purchasing SSE-Engineer learning materials from us. We are pass guarantee and money back guarantee, and money will be returned to your payment account. We have a professional team to collect and research the latest information for SSE-Engineer Exam Dumps, we can ensure you that the exam dumps you receive are the latest one we have. In order to let you know the latest information for the SSE-Engineer learning materials, we offer you free update for one year, and the update version will be sent to your email automatically.

Palo Alto Networks Security Service Edge Engineer Sample Questions (Q25-Q30):

NEW QUESTION # 25

When a review of devices discovered by IoT Security reveals network routers appearing multiple times with different IP addresses, which configuration will address the issue by showing only unique devices?

- A. Delete all duplicate devices, keeping only those discovered using their management IP addresses.
- **B. Merge individual devices into a single device with multiple interfaces.**
- C. Add the duplicate entries to the ignore list in IoT Security.
- D. Create a custom role to merge devices with the same hostname and operating system.

Answer: B

Explanation:

When network routers appear multiple times with different IP addresses in IoT Security, it is likely because they have multiple interfaces with separate IPs. Merging these entries into a single device with multiple interfaces ensures that the system correctly identifies each router as a unique entity while maintaining visibility across all its interfaces. This approach prevents unnecessary duplicates, improves asset management, and enhances security monitoring.

NEW QUESTION # 26

A company has a Prisma Access deployment for mobile users in North America and Europe. Service connections are deployed to the data centers on these continents, and the data centers are connected by private links.

With default routing mode, which action will verify that traffic being delivered to mobile users traverses the service connection in the appropriate regions?

- A. Configure each service connection to prepend the BGP ASN five times for mobile user pool prefixes originating from the other region.
- B. Configure BGP on the customer premises equipment (CPE) to prefer the assigned community string attribute on the mobile user prefixes in its respective Prisma Access region.
- C. Configure BGP on the customer premises equipment (CPE) to prefer the MED attribute on the mobile user prefixes in its respective Prisma Access region.
- **D. Configure each service connection to filter out the mobile user pool prefixes from the other region in the advertisements to the data center.**

Answer: D

Explanation:

In Prisma Access's default routing mode, the service connections establish BGP sessions with the customer premises equipment (CPE) in the data centers. To ensure traffic destined for mobile users in a specific region (e.g., North America) traverses the service connection in that same region, you need to control the route advertisements.

Filtering out the mobile user pool prefixes from the other region on each service connection achieves this by:

- * Preventing the data center in one region from learning the specific mobile user prefixes of the other region. For example, the North American service connection would filter out the mobile user pool prefixes allocated to European users.
- * Ensuring that when a data center needs to send traffic to a mobile user, it will only see and use the route advertised by the service connection in the appropriate geographical region. This forces the traffic to enter the Prisma Access infrastructure through the intended regional service connection.

Let's analyze why the other options are incorrect based on official documentation regarding default routing mode:

- * A. Configure BGP on the customer premises equipment (CPE) to prefer the assigned community string attribute on the mobile user prefixes in its respective Prisma Access region. While BGP communities can be used for influencing routing decisions, in the context of default routing mode and ensuring regional traffic flow, relying solely on the CPE to prefer community strings might not be the most robust or direct method to guarantee traffic traverses the correct regional service connection. The service connection itself needs to control the advertisement of prefixes.

- * C. Configure BGP on the customer premises equipment (CPE) to prefer the MED attribute on the mobile user prefixes in its respective Prisma Access region. The BGP MED (Multi-Exit Discriminator) attribute is primarily used to influence the path selection between autonomous systems (AS) or within the same AS at different entry points. In this scenario, where service connections are advertising prefixes, filtering at the source (service connection) is a more direct and reliable way to ensure regional traffic flow than relying on the MED attribute on the CPE.

- * D. Configure each service connection to prepend the BGP ASN five times for mobile user pool prefixes originating from the other region. BGP AS path prepending is a mechanism to make a path less desirable. While this could influence routing, it doesn't guarantee that traffic will always take the intended regional path. Filtering provides a more definitive control over which routes are advertised and learned.

Therefore, configuring each service connection to filter out the mobile user pool prefixes from the other region in the advertisements to the data center is the verified method to ensure traffic destined for mobile users traverses the service connection in the appropriate region when using Prisma Access in default routing mode.

NEW QUESTION # 27

An engineer has configured a Web Security rule that restricts access to certain web applications for a specific user group. During testing, the rule does not take effect as expected, and the users can still access blocked web applications.

What is a reason for this issue?

- A. The rule was created at a higher level in the rule hierarchy, giving priority to a lower-level rule.
- B. The rule was created with improper threat management settings.
- C. The rule was created in the wrong scope, affecting only GlobalProtect users instead of all users.
- **D. The rule was created at a lower level in the rule hierarchy, giving priority to a higher-level rule.**

Answer: D

Explanation:

Prisma Access applies security rules in a hierarchical order, where rules at higher levels take precedence over those at lower levels.

If a more permissive rule is placed higher in the hierarchy, it may allow traffic before the restrictive Web Security rule is evaluated. To resolve this, the engineer should reorder the rules to ensure the restrictive Web Security rule is positioned higher in the hierarchy so it is applied before any broader or conflicting rules.

NEW QUESTION # 28

Which statement is valid in relation to certificates used for GlobalProtect and pre-logon?

- A. The certificate used for pre-logon must include both Subject and Subject-Alt fields.
- **B. Certificates must be deployed in the Machine Certificate Store.**
- C. A public certificate authority (CA) must sign and validate all certificates used.
- D. The GlobalProtect agent may be used to distribute pre-logon certificates.

Answer: B

Explanation:

For GlobalProtect with pre-logon, certificates must be installed in the Machine Certificate Store to ensure that authentication occurs before user login. This allows the GlobalProtect client to establish a VPN connection before the user logs in, enabling access to corporate resources such as domain controllers and authentication services. Using machine certificates ensures secure authentication and eliminates dependency on user credentials at the pre-logon stage.

NEW QUESTION # 29

Which Cloud Identity Engine capability will create a Security policy that uses Entra ID attributes as the source identification?

- A. Entra ID Cloud Group
- B. Attribute Group Mapping
- **C. Cloud Dynamic User Group**
- D. Entra ID Group Attribute

Answer: C

Explanation:

The Cloud Dynamic User Group capability in Cloud Identity Engine enables the creation of Security policies that use Entra ID (formerly Azure AD) attributes for user identification. This allows Prisma Access to dynamically apply user-based security rules based on real-time Entra ID attributes, ensuring that access policies adapt to user changes such as group membership, device compliance, or role updates.

NEW QUESTION # 30

.....

If you are going to attend the SSE-Engineer exam, and want to get the certificate of the SSE-Engineer exam, then consider the product of our company, since the pass rate of our company are above 98%, and if you attend the exam and failed it within 60 days after the purchasing, money back guarantee. Just think that you just need to spend some money for the SSE-Engineer Exam, you will get the certificate of the business, and you not just have a more certificate than others, it's not only a skill, but also a chance. With the certificate for the SSE-Engineer exam, you are approved by the professionals and you are also a professional in this industry.
