We are engaged in IT certification examinations guide torrent many years, most our products are similar with the real test. Normally questions quantity of our Microsoft AZ-800 guide torrent materials are more than the real test. Sometimes candidates may doubt why our questions are more than the real test. Our AZ-800 Guide Torrent materials are not only including a part of real test questions but also a part of practice questions, buyers can master exam key knowledge better.

The AZ-800 Exam comprises a series of multiple-choice questions that test your knowledge of various technologies such as Azure AD, Azure DNS, Azure Stack HCI, and various networking concepts, among others. AZ-800 exam is divided into different sections and has various objectives such as designing and implementing identity and access management, implementing and managing hybrid networking, and data platform solutions that aid decision making.

Free PDF 2026 AZ-800: Administering Windows Server Hybrid Core Infrastructure Useful Test Cram Review

The learners' learning conditions are varied and many of them may have no access to the internet to learn our AZ-800 study materials. If the learners leave home or their companies they can't link the internet to learn our AZ-800 study materials. But you use our APP online version you can learn offline. If only you use the AZ-800 study materials in the environment of being online for the first time you can use them offline later. So it will be very convenient for every learner because they won't worry about when they go out or go to the remote area that they can't link the internet to learn our AZ-800 Study Materials, and they can use our APP online version to learn at any place or time. That's the great merit of our APP online version and the learners who have difficulties in linking the internet outside their homes or companies can utilize this advantage, they can learn our AZ-800 study materials at any place.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q70-Q75):

NEW QUESTION # 70

You have a Group Policy Object (GPO) named GPO1 that contains user settings only.

You plan to apply GPO1 to a global security group named Group1.

You link GPO1 to the domain, and you remove all the permissions granted to the Authenticated Users group.

You need to configure permissions for GPO1 to meet the following requirements.

- * GPO1 must apply only to the users in Group 1.
- * The solution must use the principle of least privilege

Answer:

Explanation:

Explanation:

NEW QUESTION # 71

You have a Windows Server container host named Server1.

You create a Dockerfile named dfl.

You need to generate a container image by using dfl.

Which command should you run?

- A. docker images
- **B. docker build**
- C. docker create
- D. docker exec

Answer: B

Explanation:

This command is specifically designed to create a container image from a Dockerfile. It reads the instructions in the Dockerfile and builds the image layer by layer.

```
docker build -t <image_name> -f dfl
```

NEW QUESTION # 72

You have an Active Directory domain that contains a file server named Server1. Server1 runs Windows Server and includes the file shares shown in the following table.

When users login to the network they receive the following network drive mappings.

* H: maps to Wserver1\users\%UserName%

* G: maps to \\server1\%Department%

You need to limit the amount of space consumed by user's on Server1. The solution must meet the following requirements:

- * Prevent users using more than 5GB of space on their H: drive
- * Prevent Accounts department users from using more than 10GB of space on the G: drive
- * Prevent Marketing department users from using more than 15GB of space on the G: drive
- * Prevent Customer Service department users from using more than 2GB of space on the G: drive
- * Minimize administrative effort

What should you use?

- A. NTFS Disk quotas
- B. Storage tiering
- **C. File Server Resource Manager (FSRM) quotas**
- D. Group Policy Preferences

Answer: C

NEW QUESTION # 73

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

The virtual machines will be joined to Azure AD DS.

You need to deploy Active Directory Domain Services (AD DS) to ensure that the virtual machines can be deployed and joined to

Azure AD DS.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Reference:

The Administering Windows Server Hybrid Core Infrastructure guidance for deploying Azure Active Directory Domain Services (Azure AD DS) in a new subscription is explicit about the required sequence.

First, you prepare networking: "Before you enable Azure AD DS, create or select an Azure virtual network and subnet that will host the managed domain." Next, you provision the managed domain: "Enable Azure AD DS into the chosen virtual network/subnet; the service deploys managed domain controllers and exposes domain IP addresses." Finally, you update DNS for the VNet so VMs can locate the domain: "After the managed domain is provisioned, configure the virtual network DNS servers to the IP addresses of the Azure AD DS domain controllers so that virtual machines can resolve the domain and join it." The course also clarifies what you do not do with Azure AD DS: "Azure AD DS is a managed domain; you do not install the AD DS role or run the AD DS installation wizard on your own VMs." And: "Azure AD Connect is only required when synchronizing identities from an on-premises AD; it isn't required for a cloud- only deployment of Azure AD DS." Therefore, the correct sequence to ensure VMs can be deployed and joined to Azure AD DS is:

Create an Azure virtual network,

Create an Azure AD DS instance (into that VNet/subnet),

Modify the VNet DNS settings to point to the managed domain IPs.

NEW QUESTION # 74

You need to implement an availability solution for DHCP that meets the networking requirements.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. On each DHCP scope, configure DHCP failover.
- B. On each DHCP server, install the Failover Clustering feature and add the DHCP cluster role.
- C. On DHCP1, create a scope that contains 25 percent of the IP addresses from Scope2.
- D. On the router in each office, configure a DHCP relay.
- E. DHCP2, configure a scope that contains 25 percent of the IP addresses from Scope 1 .

Answer: A,D
