300-430 Demo Test - Latest 300-430 Exam Papers

PremiumVCEDump aims to assist its clients in making them capable of passing the Cisco 300-430 certification exam with flying colors. It fulfills its mission by giving them an entirely free Implementing Cisco Enterprise Wireless Networks (300-430) demo of the dumps. Thus, this demonstration will enable them to scrutinize the quality of the Implementing Cisco Enterprise Wireless Networks (300-430) study material.

Cisco Implementing Cisco Enterprise Wireless Networks Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which statement about the VideoStream/Multicast Direct feature is true?

- A. It converts the unicast frame to a multicast frame over the air.
- B. IP multicast traffic is reliable over WLAN by default as defined by the IEEE 802.11 wireless multicast delivery mechanism.
- C. It makes the delivery of the IP multicast stream less reliable over the air, but reliable over Ethernet.
- **D. Each VideoStream client acknowledges receiving a video IP multicast stream.**

Answer: D

Explanation:

The IEEE 802.11 wireless multicast delivery mechanism does not provide a reliable way to acknowledge lost or corrupted packets. As a result, if any multicast packet is lost in the air, it is not sent again which may cause an IP multicast stream unviewable.

The Media Stream (formerly VideoStream) feature makes the IP multicast stream delivery reliable over the air, by converting the multicast frame to a unicast frame over the air. Each Media Stream client acknowledges receiving a video IP multicast stream.

NEW QUESTION # 31

A network engineer wants to implement QoS across the network that supports multiple VLANs. All the APs are connected to switch ports and are configured in local mode. Which trust model must be configured on the switch ports to which the APs are connected?

- A. CoS
- B. IPP
- C. WMM UP
- **D. DSCP**

Answer: D

NEW QUESTION # 32

A customer managing a large network has implemented location services. Due to heavy load, it is needed to load balance the data coming through NMSP from the WLCs. Load must be spread between multiple CMX servers to help optimize the data flow for APs. Which configuration in CMX meets this requirement?

- A. `cmxctl config feature flags nm脾b.cmxgrouping true`
- **B. `cmxctl config feature flags nm脾b.cmx-ap-grouping true`**
- C. `cmxctl config feature flags nm脾b.cmx-rssi-distribute true`
- D. `cmxctl config feature flags nm脾b.cmx-loadbalance true`

Answer: B

Explanation:

To load balance the data coming through NMSP from the WLCs and spread the load between multiple CMX servers, the configuration `cmxctl config feature flags nm脾b.cmx-ap-grouping true` should be used. This enables the load balancing feature and helps optimize the data flow for APs in a large network environment. References: The configuration for load balancing in CMX is explained in the certification guide, which outlines the commands and flags necessary to manage data flow efficiently.

NEW QUESTION # 33

The IT department creates a video containing instructions for employees who have just joined the company. Newcomers need to join the wireless network named NEW4501999110. The WLAN name will be changed daily by IT support. Only new employees must receive the video over wireless multicast. What allows this feature?

- A. TPC
- **B. WMF**
- C. DCA
- D. WMM

Answer: B

Explanation:

Wireless Multicast Forwarding (WMF) is designed to efficiently forward multicast traffic on wireless networks by sending multicast frames only to the interested clients who have joined the multicast group, using IGMP to track group membership.

This is ideal for scenarios like delivering instructional videos via multicast only to specific users (new employees) connected to a particular WLAN, even if the WLAN name changes daily.

WMF improves wireless performance and reliability for multicast streaming by converting multicast frames to unicast frames for targeted delivery, reducing unnecessary traffic and improving quality.

NEW QUESTION # 34

An engineer is performing a Cisco Hyperlocation accuracy test and executes the `cmxloc start` command on Cisco CMX. Which two parameters are relevant? (Choose two.)

- A. X, Y real location
- B. client MAC address
- C. WLC IP address
- D. client description
- E. AP name

Answer: A,B
