

F5 - F5CAB4 - Newest BIG-IP Administration Control Plane Administration Reliable Exam Dumps

BTW, DOWNLOAD part of TestInsides F5CAB4 dumps from Cloud Storage: <https://drive.google.com/open?id=15ruxwjaBUYzpKKRvJUycjgIB1j4qSL4a>

New questions will be added into the study materials, unnecessary questions will be deleted from the F5CAB4 exam simulation. Our new compilation will make sure that you can have the greatest chance to pass the exam. If you compare our F5CAB4 training engine with the real exam, you will find that our study materials are highly similar to the real exam questions. So you just need to memorize our questions and answers of the F5CAB4 Exam simulation, you are bound to pass the exam.

F5 F5CAB4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Identify and report current device status: This domain covers monitoring BIG-IP operational status through LCD panels, dashboards, Network Map, GUITMSH commands, and checking high availability states.
Topic 2	<ul style="list-style-type: none">Apply procedural concepts required to manage the state of a high availability pair: This domain covers controlling and monitoring failover states in high availability pairs, including forcing standbyoffline modes, reporting failover status, and verifying device trust.

Topic 3	<ul style="list-style-type: none"> Given a scenario, determine device upgrade eligibility: This domain covers determining appropriate timing for software and platform upgrades and strategies to minimize downtime during upgrades.
Topic 4	<ul style="list-style-type: none"> Identify management connectivity configurations: This section focuses on understanding management access configurations, including management IP addresses, port lockdown settings, remote connectivity verification, and troubleshooting access issues.
Topic 5	<ul style="list-style-type: none"> Explain authentication methods: This section focuses on user management including creating modifying users, configuring remote authentication providers, and implementing group-based access control.
Topic 6	<ul style="list-style-type: none"> Given a scenario, interpret Service status: This section teaches interpreting service states, analyzing netstat output, and determining whether services are listening on specific ports.
Topic 7	<ul style="list-style-type: none"> Identify configured system services: This domain covers verifying proper configuration of essential services including DNS, NTP, SNMP, and syslog.
Topic 8	<ul style="list-style-type: none"> Apply procedural concepts required to create, manage, and restore a UCS archive: This domain covers UCS backup and restore procedures, understanding backup use cases, proper storage practices, and UCS file contents including private keys.
Topic 9	<ul style="list-style-type: none"> Explain config sync: This section focuses on configuration synchronization procedures, identifying sync errors, determining sync necessity, checking sync status, and comparing configuration timestamps.

Pass Guaranteed 2026 F5 F5CAB4 Useful Reliable Exam Dumps

The reality is often cruel. What do we take to compete with other people? More useful certifications like F5 certificate? Perhaps the few qualifications you have on your hands are your greatest asset, and the F5CAB4 test prep is to give you that capital by passing F5CAB4 Exam fast and obtain certification soon. Don't doubt about it. More useful certifications mean more ways out. If you pass the F5CAB4 exam, you will be welcome by all companies which have relating business with F5CAB4 exam torrent.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q35-Q40):

NEW QUESTION # 35

A BIG-IP Administrator needs to fall over the active device. The administrator logs into the Configuration Utility and navigates to Device Management > Traffic Group. However, "Force to Standby" is greyed out. What is causing this issue?

- A. The BIG-IP Administrator is on the Standby Device
- B. The BIG-IP Administrator is logged in as administrator
- C. The BIG-IP Administrator is logged in as root
- D. The BIG-IP Administrator is NOT logged into command line to tail over

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: In a High Availability pair, the "Force to Standby" action is a Control Plane command used to trigger a manual failover. This option is only logical and available on the device that is currently in the Active state. If the button is greyed out, it indicates that the administrator is already logged into the Standby unit, which has no active traffic groups to relinquish.

NEW QUESTION # 36

A BIG-IP administrator is troubleshooting inconsistent configuration objects on devices in a device group.

The administrator uses the command:

```
tmsh run /cm watch-devicegroup-device
```

and observes the following output:

```
devices <devgroup> device clu_id cl_orig cl_time last_sync
20:21 sync_test bigip_a 3273 bigip_a 14:27:00
20:21 sync_test bigip_b 1745 bigip_b 13:52:34 13:42:04
20:21 sync_test bigip_c 1745 bigip_a 13:52:34 13:42:04
```

What two conclusions can be made about this output? (Choose two answers)

- **A. bigip_a has the latest configuration.**
- **B. Two of the devices in the device group have a configuration that is out of date.**
- C. The correct configuration exists on bigip_a and bigip_c because their cluster times match.
- D. The correct configuration exists on bigip_b and bigip_c because their cluster times match.
- E. The config from bigip_c was synced to the other devices in the device group during the most recent ConfigSync.

Answer: A,B

Explanation:

watch-devicegroup-device shows (among other columns) the commit ID (cid.id / shown here as clu_id), the originating device for that commit (cid-orig / shown here as cl_orig), and the time the configuration change was made (cid.time / shown here as cl_time). The highest/newest commit ID and its time represent the most recent configuration change seen among the devices.

(clouddocs.f5.com)

* bigip_a has the latest configuration (A) because it shows commit ID 3273 at 14:27:00, which is newer than commit ID 1745 at 13:52:34 on bigip_b and bigip_c. (clouddocs.f5.com)

* Two devices are out of date (B) because bigip_b and bigip_c are still on the older commit ID 1745, so they do not match the latest commit shown on bigip_a. (clouddocs.f5.com) Why the other options are not supported by this output:

* C is not supported: bigip_c is not showing a newer commit than the others; it's on the older commit (1745), so it's not the source of the most recent change. The output's cid-orig column is what tells you where the change was made. (clouddocs.f5.com)

* D/E are incorrect logic: matching cid.time between two devices only indicates they share the same change timestamp/commit, not that it is the correct or latest configuration. The "latest" is indicated by the newest commit ID/time (here, bigip_a).

(clouddocs.f5.com)

NEW QUESTION # 37

A BIG-IP Administrator makes a configuration change to a Virtual Server on the Standby device of an HA pair. The HA pair is currently configured with Auto-Sync Enabled. What effect will the change have on the HA pair configuration?

- A. The change will be undone next time a configuration change is made on the Active device.
- **B. The change will take effect when Auto-Sync propagates the config to the HA pair.**
- C. The change will be propagated next time a configuration change is made on the Active device.
- D. The change will be undone when Auto-Sync propagates the config to the HA pair.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration documents: TMOS Device Service Clustering (DSC) allows for configuration changes to be made on any device within a synchronization group. If Auto-Sync is enabled, the Control Plane detects the change on the Standby unit and automatically propagates (pushes) that updated configuration to the other members of the HA pair

NEW QUESTION # 38

In a Palo Alto Networks firewall HA pair, what happens if a configuration change is made directly on the Passive device while Auto-Sync is enabled?

- A. The change will be undone next time a configuration change is made on the Active device.
- **B. The change will take effect when Auto-Sync propagates the config to the HA pair.**
- C. The change will be propagated next time a configuration change is made on the Active device.
- D. The change will be undone when Auto-Sync propagates the config to the HA pair.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: TMOS Device Service Clustering (DSC) allows for configuration changes to be made on any device within a synchronization group. If Auto-Sync is enabled, the Control Plane detects the change on the Standby unit and automatically propagates (pushes) that updated configuration to the other members of the HA pair

NEW QUESTION # 39

Users are unable to reach an application. The BIG-IP Administrator checks the Configuration Utility and observes that the Virtual Server has a red diamond in front of the status.

What is causing this issue? (Choose one answer)

- A. All pool members are down
- B. All pool members have been disabled
- C. The Virtual Server is disabled
- D. The Virtual Server is receiving HTTPS traffic over an HTTP virtual

Answer: C

Explanation:

In the BIG-IP Configuration Utility, status icons provide immediate health information. A red diamond specifically indicates that the object itself is administratively disabled. When a virtual server is disabled, BIG-IP will not accept or process traffic for that virtual server, regardless of pool or node state.

* If all pool members were down, the virtual server would typically show a yellow triangle (available but no resources).

* If all pool members were disabled, the virtual server would usually still be enabled but unavailable due to pool status, not shown as a red diamond.

* Protocol mismatch (HTTPS sent to HTTP) does not change the administrative status icon of the virtual server.

Therefore, the red diamond clearly indicates the virtual server is disabled, making C the correct answer.

NEW QUESTION # 40

.....

Our F5CAB4 study materials are full of useful knowledge, which can meet your requirements of improvement. Also, it just takes about twenty to thirty hours for you to do exercises of the F5 F5CAB4 Study Guide. The learning time is short but efficient. You will elevate your ability in the shortest time with the help of our F5 F5CAB4 preparation questions.
