ITFAS-Level-1 Exam Study Guide & ITFAS-Level-1 Preparation Store

ITFAS-Level-1 Test Guide can guarantee that you can study these materials as soon as possible to avoid time waste. Inspection and Testing of Fire Alarm Systems Level I Exam Study Question can help you optimize your learning method by simplifying obscure concepts. ITFAS-Level-1 Exam Questions will spare no effort to perfect after-sales services.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q79-Q84):

NEW QUESTION # 79

When shall the elevator alternate level recall function be initiated?

- A. In response to activation of a smoke detector located on a floor above designated lobby
- B. In response to activation of a smoke detector located at the designated elevator lobby

- C. When elevator Phase I recall fails to initiate
- D. With activation of a general building alarm

Answer: B

Explanation:

Elevator alternate level recall is a life safety feature designed to prevent passengers from arriving at a smoke- compromised floor. NFPA 72 and elevator codes dictate that this function must activate when smoke is detected at the primary recall level (designated lobby).

NFPA 72 (2022), Section 21.3.3.1:

"When the elevator lobby smoke detector required for the designated recall level is activated, the elevator shall be recalled to an alternate level." This action prevents elevators from opening at a smoke-filled lobby.

Correct answer: A. In response to activation of a smoke detector located at the designated elevator lobby

NEW QUESTION # 80

When is a shunt trip operated to power down an elevator?

- A. When a pull station is activated
- B. When a heat detector is tripped
- C. When a sprinkler head is activated
- D. When a smoke detector is tripped

Answer: C

Explanation:

Elevators must be shut down when there is water discharge in the hoistway to prevent electrical hazards and damage. This shutdown is done using a shunt trip breaker.

NFPA 72 (2022), Section 21.4.2:

"Where sprinklers are located in the elevator machine room, control space, or hoistway, means shall be provided to automatically disconnect the main power supply to the elevator prior to the application of water." This is triggered by a waterflow switch or heat detector, but the standard design uses the sprinkler head activation as the point of shutdown via heat detector.

Important: While the heat detector usually triggers the shunt trip, the sprinkler head activation is the condition being detected.

Correct answer: D. When a sprinkler head is activated

NEW QUESTION # 81

Which NFPA standard regulates how to perform the test of engine driven generator?

- A. NFPA 70
- B. NFPA 101
- C. NFPA 72
- D. NFPA 110

Answer: D

Explanation:

Engine-driven generators used for emergency power are not governed directly by NFPA 72. Instead, their installation and testing requirements are found in:

NFPA 110 - Standard for Emergency and Standby Power Systems

NFPA 110 (2022), Chapter 8 details how engine-driven generators must be tested, including runtime, load testing, and maintenance intervals.

NFPA 72 references NFPA 110 whenever standby/emergency power is used for fire alarm systems.

Correct answer: D. NFPA 110

NEW QUESTION # 82

Smoke alarms in one- and two-family dwellings shall be replaced when they fail to operate or they have been in place a maximum of how many years?

- A. 0

- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

NFPA 72 requires smoke alarms in residential settings to be replaced every 10 years, even if they have not shown any signs of failure.

NFPA 72 (2022), Section 29.8.1.4:

"Unless otherwise recommended by the manufacturer, smoke alarms shall be replaced when they fail to respond to operability tests or have been in service for 10 years." Correct answer: C. 10

NEW QUESTION # 83

Which activity is required at the semiannual inspection of notification appliances?

- A. Verify flash rate
- B. Verify synchronization of strobes
- C. Verify location and condition
- D. Verify candela setting

Answer: C

Explanation:

Semiannual visual inspection of notification appliances checks their physical condition, mounting, visibility, and labeling- not candela or flash rate.

NFPA 72 (2022), Table 14.3.1 - Visual Inspection Frequencies:

"Visible and audible notification appliances" # Frequency: Semiannually Method: Verify proper location and physical condition

Correct answer: C. Verify location and condition

NEW QUESTION # 84

.....

There is no denying the fact that everyone in the world wants to find a better job to improve the quality of life. Generally speaking, these jobs are offered only by some well-known companies. In order to enter these famous companies, we must try our best to get some certificates as proof of our ability such as the ITFAS-Level-1 Certification.
