

Free PDF Quiz 2026 The Best Nutanix NCP-DB-6.10: Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Intereactive Testing Engine

Our web-based practice exam software is an online version of the Nutanix NCP-DB-6.10 practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the certification exam on the first attempt, our Nutanix NCP-DB-6.10 Practice Test software is your best option. You will go through Nutanix NCP-DB-6.10 exams and will see for yourself the difference in your preparation.

After the client pay successfully they could receive the mails about NCP-DB-6.10 guide questions our system sends by which you can download our test bank and use our study materials in 5-10 minutes. The mail provides the links and after the client click on them the client can log in and gain the NCP-DB-6.10 Study Materials to learn. The procedures are simple and save clients' time. For the client the time is limited and very important and our product satisfies the client's needs to download and use our NCP-DB-6.10 practice engine immediately.

NCP-DB-6.10 Valid Study Questions, NCP-DB-6.10 Pass Guide

Our NCP-DB-6.10 exam questions are valuable and useful and if you buy our NCP-DB-6.10 study materials will provide first-rate service to you to make you satisfied. We provide not only the free download and try out of the NCP-DB-6.10 Practice Guide but also the immediate download after your purchase successfully. To see whether our NCP-DB-6.10 training dumps are worthy to buy, you can have a try on our product right now.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q33-Q38):

NEW QUESTION # 33

In Nutanix Database Service (NDB), which component is primarily responsible for coordinating database lifecycle tasks such as deployment, cloning, and patching?

- A. NDB Agent
- **B. NDB Controller VM**
- C. Calm Blueprint Engine
- D. Prism Central

Answer: B

Explanation:

The NDB Controller VM is the core orchestration component that manages workflows for database lifecycle tasks. The Agent runs

inside DB Server VMs to execute commands, while Prism Central provides general management but not database orchestration.

NEW QUESTION # 34

While using Time Machine (TM) to restore a source database, the option to restore data to Point in Time is not available. What should an administrator do to restore databases to Point in Time?

- A. Update TM SLA to BRASS or lower.
- B. Restore Source DB using a snapshot
- C. Update TM SLA to BRONZE or higher.
- D. Create DB clone using a snapshot.

Answer: C

Explanation:

In Nutanix Database Service (NDB), the Time Machine (TM) feature allows restores, including Point-in-Time (PIT) restores, which require continuous log retention to replay transaction logs to a specific moment. If the option to restore data to a Point in Time is unavailable, it indicates that the current Time Machine Service Level Agreement (SLA) does not support continuous log retention. NDB SLAs are categorized (e.g., BRONZE, SILVER, GOLD), with BRONZE or higher levels required to enable PIT restore by including continuous log retention. The administrator must update the TM SLA to at least BRONZE to enable this feature, ensuring logs are retained for PIT operations.

NEW QUESTION # 35

An administrator has been asked to add a new Nutanix AHV cluster to the current single default container for DB provisioning. Which configuration should be performed before enabling NDB multi-cluster?

- A. Enable High Availability for NDB service on the Administration page.
- B. Configure datastore mapping within Prism Element Protection Domains.
- C. Add both clusters under Prism Central management and verify NDB is registered to the same Prism Central Instance. environment using a storage container as the
- D. Deploy Nutanix SelfService VM and use blueprints to allow NDB to deploy databases on multiple clusters.

Answer: C

Explanation:

To add a new Nutanix AHV cluster to the current single default container for database provisioning and enable NDB multi-cluster functionality, the administrator must ensure a unified management framework. Nutanix Prism Central serves as the centralized management platform for multi-cluster environments, allowing NDB to manage multiple clusters (in this case, the existing cluster and the new AHV cluster) under a single instance. Before enabling multi-cluster support in NDB, both clusters must be registered with the same Prism Central instance, and NDB must be confirmed as registered to that instance. This ensures consistent policy enforcement, resource visibility, and database provisioning across clusters using the default container.

NEW QUESTION # 36

How can an administrator exclude Kernel patches for the Linux OS using the most efficient means?

- A. Define a pre-script to disable the repositories in the Patch Now advanced options
- B. Define a pre-script to disable the repositories in the Maintenance Window advanced options.
- C. Exclude the appropriate repositories on the VM and reboot prior to patching.
- D. Exclude the appropriate repositories on the VM prior to patching.

Answer: D

Explanation:

NDB supports Linux OS patching for database server VMs. Linux OS patching is performed by using the yum or apt package managers, depending on the Linux distribution. To exclude Kernel patches for the Linux OS, the administrator can disable or exclude the appropriate repositories on the VM prior to patching. This can be done by editing the yum.conf or apt.conf files, or by using the --disablerepo or --exclude options in the yum or apt commands. This way, the administrator can control which patches are applied to the VM without affecting other VMs or requiring additional scripts or reboots.

NEW QUESTION # 37

An administrator needs to provision PostgreSQL instance from a software profile. The software profile was created from a VM with services such as etcd, HAProxy, Patroni and keepalived installed. What should the administrator perform to successfully provision an HA instance?

- A. Enable the services, create a software profile version, and provision an HA instance.
- B. Provision an HA instance with the services enabled.
- **C. Provision an HA instance with the services disabled.**
- D. Disable the services, create a software profile version, and provision an HA instance.

Answer: C

Explanation:

To provision a PostgreSQL HA instance from a software profile created from a VM with services like etcd, HAProxy, Patroni, and keepalived installed, the administrator must ensure the instance aligns with NDB's HA framework. These services (e.g., Patroni for PostgreSQL HA management, HAProxy for load balancing) may conflict with NDB's built-in HA mechanisms. Provisioning an HA instance with these services disabled allows NDB to manage HA using its native replication and failover capabilities (e.g., streaming replication), avoiding duplication or interference from the VM's pre-installed services.

NEW QUESTION # 38

.....

Have you imagined that you can use a kind of study method which can support offline condition besides of supporting online condition? The Software version of our NCP-DB-6.10 training materials can work in an offline state. If you buy the Software version of our NCP-DB-6.10 Study Guide, you have the chance to use our NCP-DB-6.10 learning engine for preparing your exam when you are in an offline state. We believe that you will like the Software version of our NCP-DB-6.10 exam questions.

NCP-DB-6.10 Valid Study Questions: <https://www.examcollectionpass.com/Nutanix/NCP-DB-6.10-practice-exam-dumps.html>

Nutanix NCP-DB-6.10 Interactive Testing Engine The system is highly flexible, which has short reaction time, Nutanix NCP-DB-6.10 Interactive Testing Engine Our Certification Exam Questions and Answers with APP Exam Simulator contains Real Questions, There is no doubt that we will never miss any key points in our NCP-DB-6.10 training materials, As information and technology has been up to so much that new inventions and innovations keep coming in and we have to keep updating the NCP-DB-6.10 study material accordingly.

You may think my instinct had told me that the market would NCP-DB-6.10 soon decline, So how do you find out what you're worth, The system is highly flexible, which has short reaction time.

Our Certification Exam Questions and Answers with APP Exam Simulator contains Real Questions, There is no doubt that we will never miss any key points in our NCP-DB-6.10 Training Materials.

Premium Nutanix NCP-DB-6.10 Questions

As information and technology has been up to so much that new inventions and innovations keep coming in and we have to keep updating the NCP-DB-6.10 study material accordingly.

If you are really not sure which version you like best, you can also apply for multiple trial versions of our NCP-DB-6.10 exam questions.
