UiPath UiPath-ADPv1 Actual Exams & Certification UiPath-ADPv1 Test Questions

Perhaps you have had such an unpleasant experience about what you brought in the internet was not suitable for you in actual use, to avoid this, our company has prepared UiPath-ADPv1 free demo in this website for our customers. The content of the free demo is part of the content in our real UiPath-ADPv1 study guide. Therefore, you can get a comprehensive idea about our real study materials. All you need to do is just to find the "Download for free" item, and you will find there are three kinds of versions of UiPath-ADPv1 Learning Materials for you to choose from namely, PDF Version Demo, PC Test Engine and Online Test Engine, you can choose to download any one as you like.

Your selection on the riht tool to help your pass the UiPath-ADPv1 exam and get the according certification matters a lot for the right UiPath-ADPv1 exam braindumps will spread you a lot of time and efforts. Our UiPath-ADPv1 Study Guide is the most reliable and popular exam product in the marcket for we only sell the latest UiPath-ADPv1 practice engine to our clients and you can have a free trial before your purchase.

Pass Guaranteed Quiz 2026 UiPath Reliable UiPath-ADPv1 Actual Exams

In this career advancement UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) certification journey you can get help from valid, updated, and real UiPath-ADPv1 Dumps questions which you can instantly download from TopExamCollection. At this platform, you will get the top-rated and Real UiPath-ADPv1 Exam Questions that are ideal study material for quick UiPath UiPath-ADPv1 exam preparation.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q97-Q102):

NEW QUESTION # 97
What is the output type returned when using a Get Test Data Queue Item activity?

- A. Dictionary
- B. Object
- C. QueueItem

Answer: C

Explanation:
The output type returned when using a Get Test Data Queue Item activity is QueueItem. The Get Test Data Queue Item activity is an activity that allows the developer to retrieve a test data queue item from a test data queue in Orchestrator. A test data queue is a special type of queue that is used to store and manage test data for automation testing purposes. A test data queue item is a data object that contains the test data and the expected results for a test case. The Get Test Data Queue Item activity has an output property called TestDataQueueItem, which returns the test data queue item as a QueueItem type. The QueueItem type is a class that represents a queue item in Orchestrator. The QueueItem type has various properties and methods that allow the developer to access

and manipulate the data and the status of the queue item. References: [Get Test Data Queue Item], [QueueItem Class]

NEW QUESTION # 98
What are the components that define a state within a State Machine in UiPath Studio?

- A. Activities, Connectors, and Annotations.
- B. Sequence, Flowchart, and Transactional Business Process.
- C. Input Arguments, Output Arguments, and Variables.
- D. Entry, Exit, and Transition Actions with Trigger Conditions.

Answer: D

Explanation:
A state machine is a type of automation that uses a finite number of states in its execution. It can go into a state when it is triggered by an activity, and it exits that state when another activity is triggered1. A state machine consists of states, transitions, and actions1. The components that define a state within a state machine in UiPath Studio are:
*Entry Actions: These are the activities that are executed when the state is entered1. For example, an entry action can be used to initialize a variable, display a message, or log some information1.
*Exit Actions: These are the activities that are executed when the state is exited1. For example, an exit action can be used to clean up some resources, close an application, or update a status1.
*Transition Actions: These are the activities that are executed when a transition from one state to another occurs1. For example, a transition action can be used to assign a value, send an email, or invoke a workflow1.
*Trigger Conditions: These are the conditions that determine when a transition from one state to another should happen1. For example, a trigger condition can be based on a variable value, a user input, or a timer1.

NEW QUESTION # 99
Which activity should a developer use to add custom information to logs related to transactions for tracing purposes?

- A. Build Log
- B. Add Log Fields
- C. Add Custom Log
- D. Update Logs

Answer: B

Explanation:
The Add Log Fields activity enables you to add custom information to logs related to transactions for tracing purposes1. The activity takes a collection of string arguments as input, which are added to every subsequent log message throughout the entire workflow, unless a Remove Log Fields activity is used1. The custom log fields can be useful for adding more information and visibility to the logs, especially for transactional data processes2. For example, you can use the Add Log Fields activity to add the transaction ID, the transaction status, the business process name, or any other relevant data to the logs2. Therefore, the correct answer is A. Add Log Fields.

NEW QUESTION # 100
Which activity from the Microsoft 365 package should be used to retrieve the Driveitem ID for a Sharepoint URL?

- A. Share File/Folder
- B. Get Group
- C. Get File/Folder
- D. Download File

Answer: C

Explanation:
The Get File/Folder activity from the Microsoft 365 package should be used to retrieve the Driveitem ID for a Sharepoint URL. This activity allows you to get information about a specific file or folder from OneDrive or SharePoint, such as the name, size, ID, URL, etc. You can specify the file or folder to be retrieved by browsing, entering the ID, or entering the URL1.
To get the Driveitem ID for a Sharepoint URL, you need to do the following steps:

Use the Get File/Folder activity and select the Enter Url option in the File or folder to get property.

Enter the Sharepoint URL of the file or folder in the File or folder Url property. For example, 5.

Create a variable of type Microsoft.Graph.DriveItem in the Output property. For example, driveItem.

Use an Assign activity to get the DriveitemID from the output variable. For example, driveItemId = driveItem.Id.

The other options are not activities that can be used to retrieve the DriveitemID for a Sharepoint URL, because they either do not have an output property that returns the DriveitemID, or they do not have an input property that accepts the Sharepoint URL. For example:

The Get Group activity gets information about a specific group from Microsoft 365, such as the name, ID, description, etc. It does not have an output property that returns the DriveitemID, nor an input property that accepts the Sharepoint URL2.

The Share File/Folder activity shares a file or folder with the specified recipients. It does not have an output property that returns the DriveitemID, but only the sharing link and the expiration date3.

The Download File activity downloads a file from OneDrive or SharePoint to a local folder. It does not have an output property that returns the DriveitemID, but only the local path of the downloaded file4.

NEW QUESTION # 101

While working in an RPA testing project, you encountered the following activity in one of the workflows included in the project.

What action can you perform in your mocked file to replace the functionality of the MessageBox with a LogMessage during mock testing?

- A. Surround activity with mock.
- B. Synchronize mock.
- C. Remove mock activity.
- D. Create mock workflow.

Answer: A
