CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q125-Q130):

NEW QUESTION # 125

An organization that handles sensitive financial information wants to perform tokenization of data to enable the execution of recurring transactions. The organization is most interested in a secure, built-in device to support its solution. Which of the following would MOST likely be required to perform the desired function?

- A. UEFI
- B. eFuse
- **C. HSM**
- D. TPM
- E. FPGA

Answer: C

NEW QUESTION # 126

A company wants to ensure confidential data from its storage media files is sanitized so the drives cannot be reused. Which of the following is the BEST approach?

- A. Degaussing
- B. Encrypting
- C. Formatting
- **D. Shredding**

Answer: D

Explanation:

<https://legals shred.com/degaussing-vs-hard-drive-shredding/>

The best and most secure method of rendering hard drive information completely unusable is to completely destroy it through hard drive shredding

NEW QUESTION # 127

The help desk noticed a security analyst that emails from a new email server are not being sent out. The new email server was recently added to the existing ones. The analyst runs the following command on the new server.

```
nslookup -type=txt exampledomain.org
"v=spf1 ip4:72.58.48.0/28 -all"
```

Given the output, which of the following should the security analyst check NEXT?

- A. The version of SPF that is being used
- **B. The DNS name of the new email server**
- C. The DMARC policy
- D. The IP address of the new email server

Answer: B

NEW QUESTION # 128

A company offers a hardware security appliance to customers that provides remote administration of a device on the customer's network. Customers are not authorized to alter the configuration. The company deployed a software process to manage unauthorized changes to the appliance, log them, and forward them to a central repository for evaluation. Which of the following processes is the company using to ensure the appliance is not altered from its original configured state?

- A. Software assurance
- **B. Anti-tamper**
- C. CI/CD
- D. Change management

Answer: B

Explanation:

Anti-tamper is a process that protects a system or device from unauthorized changes or modifications. It can also log and report any attempts to alter the system or device. The company is using anti-tamper to ensure the appliance is not altered from its original configured state. CI/CD, software assurance, and change management are not processes that specifically deal with unauthorized changes. Reference: <https://www.acq.osd.mil/se/briefs/16943-DoD-AT-Overview-Brief.pdf>

NEW QUESTION # 129

An organization has several systems that require specific logons. Over the past few months, the security analyst has noticed numerous failed logon attempts followed by password resets. Which of the following should the analyst do to reduce the occurrence of legitimate failed logons and password resets?

- A. Adjust the current monitoring and logging rules
- B. Perform a manual privilege review
- **C. Use SSO across all applications**

- D. Implement multifactor authentication

Answer: C

NEW QUESTION # 130

.....
