Analytics-Con-201 Test Dumps.zip | Analytics-Con-201 Pass Rate

Revised and updated according to the syllabus changes and all the latest developments in theory and practice, our Salesforce Certified CRM Analytics and Einstein Discovery Consultant dumps are highly relevant to what you actually need to get through the certifications tests. Moreover they impart you information in the format of Analytics-Con-201 Questions and answers that is actually the format of your real certification test. Hence not only you get the required knowledge but also find the opportunity to practice real exam scenario. For consolidation of your learning, our Salesforce Certified CRM Analytics and Einstein Discovery Consultant dumps PDF file also provide you sets of practice questions and answers. Doing them again and again, you enrich your knowledge and maximize chances of an outstanding exam success.

Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q96-Q101):

NEW QUESTION # 96

A consultant sets up a Sales Analytics templated app that is very useful for sales operations at Universal Containers (UC). UC wants to make sure all of the data assets associated with the app, including recipes, dataflows, connectors, Einstein Discovery models, and prediction definitions are refreshed everyday at 6:00 AM EST.

How should the consultant proceed?

- A. Use the Data Manager and schedule the recipes/dataflows to run at 6:00 AM EST based on 'Time-based Scheduling'.
- B. Use the Data Manager and schedule each item to run at 6:00 AM EST based on 'Time-based Scheduling'.
- C. Use the App Install History under Analytics Settings and schedule the app to run at 6:00 AM EST.

Answer: C

NEW QUESTION # 97

A dashboard designer at Cloud Kicks creates a dashboard in CRM Analytics. The designer notices fields display on the dashboard with their API labels, such as "AccountId.Industry", and wants to change this behavior.

The designer also notices that the fields and their order appear to randomly change when a values table is created.

What should the CRM Analytics consultant explain to help the designer?

- A. The default fields in a values table can be changed by reordering how fields appear in the JSON of the value table.
- B. The default fields In a values table and the field labels can be modified in the dataset explorer.
- C. The field labels can only be changed in the widget properties in the dashboard edit mode.

Answer: B

Explanation:

For the scenario at Cloud Kicks where fields display with their API labels and the fields in a values table seem to change order randomly, the correct approach is to modify these settings in the dataset explorer within CRM Analytics. This allows for a more intuitive display and control over how data is presented in dashboards.

Here's how these adjustments help:

* Modifying Field Labels: Changing the field labels from their API names to more user-friendly names enhances readability and user experience. This can be done directly in the dataset explorer, which affects how fields appear across all dashboards utilizing that dataset.

* Controlling Field Order: The order of fields in a values table can seem random if not explicitly set. By using the dataset explorer, a designer can specify the order in which fields appear, which then reflects consistently in the dashboard's values table.

This functionality is part of CRM Analytics' aim to provide flexible and customizable data visualization tools.

Training on these features is available through various Salesforce Trailhead modules that discuss dashboard and dataset customization techniques, providing practical insights and guided tutorials to enhance dashboard design and user interaction.

Both these explanations are consistent with best practices as outlined in Salesforce's CRM Analytics documentation and the Trailhead educational content, ensuring that users are well-equipped to leverage the full capabilities of CRM Analytics for effective data management and presentation.

NEW QUESTION # 98

An CRM Analytics consultant creates a model to maximize the satisfaction of cases. They want to deploy the mode! and further use the model and predictions in an existing automated business process powered by Salesforce Flow.

What is the most efficient way to accomplish this?

- A. Write an Apex class with Einstein Discovery Predictions and append them to process.
- B. Use the Einstein Discovery flow action to make a prediction with the flow.
- C. Create a trigger on Case object and use REST APIs to append the predictions into the business process.

Answer: B

NEW QUESTION # 99

What is the purpose of the CRM Analytics Dashboard Inspector?

- A. To automatically remove bottlenecks to make queries run faster.
- B. To see the final query for each widget along with the results.
- C. To view the total time required to run all queries.

Answer: B

Explanation:

The CRM Analytics Dashboard Inspector is a powerful tool used to troubleshoot and optimize dashboards. Its primary function is to display the underlying SAQL (Salesforce Analytics Query Language) query executed for each widget. It helps users see the final query that is run and the corresponding results. This feature allows CRM Analytics consultants and developers to diagnose issues, optimize performance, and understand how data is being processed in the dashboard.

While the Inspector helps view execution times and identify bottlenecks, it does not automatically resolve performance issues (which is why option B is incorrect). It simply provides visibility into query performance and execution details, allowing the user to make manual optimizations.

NEW QUESTION # 100

A CRM Analytics consultant has been asked to bring data from an external database as well as five external Salesforce environments into CRMAnalytics. Twenty-five objects have been enabled from the local Salesforce connector.

The requirements are:

- * 10 objects should be enabled from an external database
- * 12 objects each from three of the external Salesforce environments
- * 15 objects each from the remaining two external Salesforce environments The consultant estimates each connector will, per object, bring between 1,000 and 1 million rows of data.

Which limit will be exceeded?

- A. Salesforce external connector number of synced rows
- B. Storage rows of data
- C. Total number of enabled objects

Answer: C

Explanation:

In evaluating the scenario presented where multiple external sources and objects are being integrated into CRM Analytics, we need to consider the total number of enabled objects across all connections. Here's a breakdown:

- * 10 objects from an external database
- * 12 objects each from three external Salesforce environments, totaling 36 objects
- * 15 objects each from two external Salesforce environments, totaling 30 objects
- * 25 objects already enabled from the local Salesforce connector

This brings us to a total of 101 objects enabled, which may exceed typical limits on the number of objects that can be enabled in a CRM Analytics environment, depending on the specific Salesforce licensing and platform limits.

NEW QUESTION # 101

.....

It is acknowledged that there are numerous Analytics-Con-201 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself. But since you have clicked into this website for Analytics-Con-201 practice materials you need not to worry about that at all because our company is especially here for you to solve this problem. We have a lot of regular customers for a long-term cooperation now since they have understood how useful and effective our Analytics-Con-201 Actual Exam is. So will you!
