Our 220-1202 test guide is suitable for you whichever level you are in right now. Whether you are in entry-level position or experienced exam candidates who have tried the exam before, this is the perfect chance to give a shot. A growing number of exam candidates are choosing our 220-1202 Exam Questions, why are you still hesitating? As long as you have make up your mind, our CompTIA A+ Certification Exam: Core 2 study question is available in five minutes, so just begin your review now! This could be a pinnacle in your life.

With the rapid development of the world economy, it has been universally accepted that a growing number of people have longed to become the social elite. However, the competition of becoming the social elite is fierce for all people. The 220-1202 exam will be a shortcut for a lot of people who desire to be the social elite. If you try your best to prepare for the 220-1202 Exam and get the related certification in a short time, it will be easier for you to receive the attention from many leaders of the big company.

Updated 220-1202 Test Cram - 220-1202 Discount Code

Our company has successfully launched the new version of our 220-1202 exam tool. Perhaps you are deeply bothered by preparing the exam, perhaps you have wanted to give it up. Now, you can totally feel relaxed with the assistance of our 220-1202 Study Guide. Our 220-1202 exam dumps are definitely more reliable and excellent than other exam tool. What is more, the passing rate of our 220-1202 study materials is the highest in the market.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q245-Q250):

NEW QUESTION # 245

An employee is trying to connect their company laptop to airport Wi-Fi. A pop-up with the airport logo appeared and was closed quickly. The internet does not work. What should a help desk technician suggest?

- A. Look for a wall socket with RJ45 and try to connect
- B. Contact the airport IT department
- C. Tell the employee that company policy prohibits connection to public Wi-Fi
- D. Reconnect to the network and read the pop-up carefully

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Public Wi-Fi networks often use captive portals, which require accepting terms or authenticating via the pop-up page before full access is granted. Closing it prematurely stops full connection.

From Travis Everett - All-in-One Exam Guide:

"Captive portals intercept the first HTTP request and present a login or acknowledgment screen. Without completing it, access is denied."

NEW QUESTION # 246

A user receives an unexpected text message containing a link to reset an expired password. Which of the following social engineering attacks is taking place?

- A. Smishing
- B. Spear phishing
- C. Whaling
- D. Vishing

Answer: A

Explanation:

The correct answer is D. Smishing, which is a form of phishing attack conducted via SMS text messages. The key indicators in this scenario are the unexpected text message and the embedded link prompting the user to reset a password. These attacks rely on urgency and fear to trick users into clicking malicious links or providing credentials.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, smishing attacks often impersonate legitimate organizations such as banks, IT departments, or service providers. The attacker claims that an account action is required, such as resetting an expired password, to prompt immediate user response.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that smishing is distinct from other phishing variants based on delivery method. Vishing uses voice calls, spear phishing targets specific individuals via email, and whaling targets high-level executives. Since this attack is delivered via text message, it is classified as smishing.

The Mike Meyers / Mark Soper Lab Manual reinforces that modern attackers increasingly use SMS because users often trust text messages more than emails. This makes smishing a highly effective and common attack vector.

Because the attack uses SMS with a malicious link, smishing is the correct answer.

NEW QUESTION # 247

A company computer is being repurposed within an organization. The existing configuration has a static IP address, but it is no longer required. Which of the following should a technician do to satisfy the network requirements?

- A. Create an exclusion in the existing IP scheme
- B. Change the currently assigned static IP
- C. Switch the NIC settings from manual to automatic
- D. Make a DHCP reservation for the computer

Answer: C

Explanation:

The correct answer is C. Switch the NIC settings from manual to automatic, which allows the computer to obtain an IP address

dynamically from the DHCP server. When a static IP address is no longer required, reverting the network configuration to DHCP ensures the system integrates properly with the current network design.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, DHCP simplifies network management by automatically assigning IP addresses, subnet masks, gateways, and DNS settings. Leaving a static IP in place can cause address conflicts or connectivity issues, especially when the device is repurposed.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that DHCP reservations are used when a device must always receive the same IP address, which is unnecessary in this scenario. Creating exclusions or manually changing the static IP does not meet the requirement to remove static addressing altogether.

The Mike Meyers / Mark Soper Lab Manual reinforces that switching the NIC to automatic configuration is the correct way to return a system to standard network operation and avoid manual IP management.

Because the static IP is no longer needed, enabling DHCP by setting the NIC to automatic configuration is the correct solution, making C the correct answer.

NEW QUESTION # 248

The screen of a previously working computer repeatedly displays an OS Not Found error message when the computer is started. Only a USB drive, a keyboard, and a mouse are plugged into the computer. Which of the following should a technician do first?

- A. Switch from UEFI to BIOS.
- **B. Check boot options.**
- C. Run data recovery tools on the disk.
- D. Partition the disk using the GPT format.

Answer: B

Explanation:

An "OS Not Found" error most commonly indicates the system isn't booting from the correct device. Verifying and correcting the boot order (ensuring the internal hard drive is prioritized over USB or other entries) is the quickest first step before making any changes to the disk or firmware settings.

NEW QUESTION # 249

A help desk technician needs to remove RAM from retired workstations and upgrade other workstations that have applications that use more memory with this RAM. Which of the following actions would the technician most likely take?

- **A. Use antistatic bags for storage and transport.**
- B. Plug in the power supply to ground each workstation.
- C. Install memory in identical pairs.
- D. Demagnetize memory for security.

Answer: A

Explanation:

RAM is an electrostatic-sensitive component. When removing or transporting RAM modules, they should be stored in antistatic bags to protect against electrostatic discharge (ESD), which can damage the memory. This is a standard best practice in hardware handling.

A). Demagnetization is not applicable to RAM.

C). Plugging in power to ground is not safe or recommended for static protection.

D). Installing identical memory pairs is applicable for dual-channel configuration, but not directly related to transporting or handling RAM.
