All contents are masterpieces from experts who imparted essence of the exam into our Data-Architect practice materials. So our high quality and high efficiency Data-Architect practice materials conciliate wide acceptance around the world. By incubating all useful content Data-Architect practice materials get passing rate from former exam candidates of 98 which evince our accuracy rate and proficiency. If your problems are divulging during the review you can pick out the difficult one and focus on those parts.

Salesforce Data-Architect Certification Exam is designed to test the skills and knowledge of professionals who work with Salesforce data. Data-Architect exam focuses on assessing the candidate's ability to design, implement and manage complex data architectures and solutions. The Salesforce Certified Data-Architect is a highly respected designation that is recognized globally and is highly sought after by companies looking to hire Salesforce professionals.

Salesforce Data-Architect Certification Exam is a comprehensive test that covers a wide range of topics related to data architecture and design. Data-Architect exam consists of 60 multiple-choice questions and is timed for 105 minutes. Data-Architect exam is available in multiple languages, and it is administered by Salesforce Training and Certification. Data-Architect exam is challenging and requires a thorough understanding of data architecture concepts and Salesforce data model.

2026 High-quality Data-Architect – 100% Free Exam Questions Pdf | Salesforce Certified Data Architect Answers Free

Having a good command of professional knowledge in this line, they devised our high quality and high effective Data-Architect study materials by unremitting effort and studious research. They are meritorious and unsuspecting experts with professional background. By concluding quintessential points into Data-Architect Preparation engine, you can pass the exam with the least time while huge progress. And our pass rate of the Data-Architect exam questions is high as 98% to 100%.

Achieving the Salesforce Data-Architect certification demonstrates your expertise in designing and implementing data architecture solutions that meet the needs of the business. It also demonstrates your ability to ensure data quality, data security, and compliance with data governance policies. Salesforce Certified Data Architect certification is highly regarded in the Salesforce ecosystem and can enhance your career opportunities and earning potential. By passing the Salesforce Data-Architect Certification Exam, you join an elite group of certified professionals who are recognized for their expertise in Salesforce data architecture.

Salesforce Certified Data Architect Sample Questions (Q119-Q124):

NEW QUESTION # 119

Northern Trail Outfitters (NTO) has implemented Salesforce for its sales users. The opportunity management in Salesforce is implemented as follows:

1. Sales users enter their opportunities in Salesforce for forecasting and reporting purposes.
2. NTO has a product pricing system (PPS) that is used to update the Opportunity Amount field on opportunities on a daily basis.
3. PPS is the trusted source within NTO for Opportunity Amount.
4. NTO uses Opportunity Forecast for its sales planning and management.

Sales users have noticed that their updates to the Opportunity Amount field are overwritten when PPS updates their opportunities. How should a data architect address this overwriting issue?

- A. Change Opportunity Amount field access to Read Only for sales users field-level security.
- B. Change PSS integration to update only Opportunity Amount field when the value is null.
- C. Create a custom field for Opportunity amount that sales users update separating the field that PPS updates.
- D. Create a custom field for Opportunity amount that PSS updates separating the field sales user updates.

Answer: A

NEW QUESTION # 120

NTO has multiple systems across its enterprise landscape including Salesforce, with disparate version the customer records. In Salesforce, the customer is represented by the contact object.

NTO utilizes an MDM solution with these attributes:

1. The MDM solution keeps track of customer master with a master key.
2. The master key is a map to the record ID's from each external system that customer data is stored within.
3. The MDM solution provides de-duplication features, so it acts as the single source of truth.

How should a data architect implement the storage of master key within Salesforce?

- A. Create an external object to store the master key with a lookup field to contact.
- B. Store the master key on the contact object as an external ID (Field for referential imports)
- C. Create a custom object to store the master key with a lookup field to contact.
- D. Store the master key in Heroku postgres and use Heroku connect for synchronization.

Answer: B

Explanation:

The best way to implement the storage of master key within Salesforce is to store it on the contact object as an external ID field for referential imports. This way, the data architect can use the master key as a unique identifier to match records from different systems and avoid duplicates. The other options are not feasible because they either require additional storage or do not support referential imports.

NEW QUESTION # 121

Universal Containers (UC) is in the process of migrating legacy inventory data from an enterprise resources planning (ERP) system into Sales Cloud with the following requirements:

Legacy inventory data will be stored in a custom child objects called Inventory_c.

Inventory data should be related to the standard Account object.

The Inventory_c object should Inhent the same sharing rules as the Account object.

Anytime an Account record is deleted in Salesforce, the related Inventory_c record(s) should be deleted as well.

What type of relationship field should a data architect recommend in this scenario?

- A. Lookup relationship fields on Inventory related to Account
- B. Master-detail relationship filed on Inventory_c, related to Account
- C. Indirect lookup relationship field on Account, related to Inventory_c
- **D. Master-detail relationship filed on Account, related to Inventory_c**

Answer: D

NEW QUESTION # 122

Universal Containers has a large volume of Contact data going into Salesforce.com. There are 100,000 existing contact records. 200,000 new contacts will be loaded. The Contact object has an external ID field that is unique and must be populated for all existing records. What should the architect recommend to reduce data load processing time?

- A. Load all records via the Upsert operation to determine new records vs. existing records.
- **B. Load new records via the Insert operation and existing records via the Update operation.**
- C. Load Contact records together using the Streaming API via the Upsert operation.
- D. Delete all existing records, and then load all records together via the Insert operation.

Answer: B

Explanation:

Loading new records via the Insert operation and existing records via the Update operation will allow using the external ID field as a unique identifier and avoid any duplication or overwriting of records. This is faster and safer than deleting all existing records or using the Upsert operation, which might cause conflicts or errors .

NEW QUESTION # 123

Universal Containers has a legacy system that captures Conferences and Venues. These Conferences can occur at any Venue. They create hundreds of thousands of Conferences per year. Historically, they have only used 20 Venues. Which two things should the data architect consider when denormalizing this data model into a single Conference object with a Venue picklist? Choose 2 answers

- A. Limitations on master -detail relationships.
- **B. Bulk API limitations on picklist fields.**
- **C. Standard list view in -line editing.**
- D. Org data storage limitations.

Answer: B,C

NEW QUESTION # 124
