## Linux Foundation Certified Kubernetes Administrator (CKA) Program Exam Sample Questions (Q82-Q87):

### NEW QUESTION # 82

You are managing a Kubernetes cluster with several namespaces. You need to restrict access to the 'production' namespace, ensuring only authorized users can access resources within that namespace. Create a Role and RoleBinding that allows users in the 'developers' group to access pods and deployments within the 'production' namespace.

#### Answer:

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

Step 1: Create a Role

Create a Role named 'production-access' with the following permissions:

Step 2: Create a RoleBinding Create a RoleBinding named 'production-developers' that binds the 'production-access' role to the 'developers' group:

Step 3: Verify Verify the role and rolebinding have been created correctly: `kubectl get role --namespace=production` `kubectl get rolebinding --namespace=production`

### NEW QUESTION # 83

You are setting up a persistent volume to host a MySQL database, but you want to ensure data consistency and availability. You have multiple nodes in your Kubernetes cluster. Describe the volume mode, access mode, and reclaim policy you would use for this volume.

#### Answer:

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

1. Volume Mode: For a MySQL database, you would use the "Block" volume mode. Block mode allows for direct access to the storage device as a block device, which is ideal for databases that require low-level access and control over storage.
2. Access Mode: To ensure data consistency and availability, you would use the "ReadWriteOnce" access mode. This mode allows only one pod to mount the volume at a time, preventing data corruption.
3. Reclaim Policy: To prevent accidental data deletion, you would use the "Retain" reclaim policy. This policy ensures that the volume is not deleted when the pod is deleted, preserving the database data. Here's an example of a PersistentVolume definition using the specified configurations:

### NEW QUESTION # 84

Updates to dynamic user group membership are automatic therefore using dynamic user groups instead of static group objects allows you to:

- A. respond to changes in user behavior or potential threats without automatic policy changes
- B. respond to changes in user behavior and confirmed threats with manual policy changes
- C. respond to changes in user behavior or potential threats without manual policy changes
- D. respond to changes in user behavior or potential threats using manual policy changes

#### Answer: C

### NEW QUESTION # 85
