Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q83-Q88):

NEW QUESTION # 83
Exhibit

Referring to the exhibit, which two statements describe the type of proxy used? (Choose two.)

- A. reverse proxy
- B. forward proxy
- C. client protection proxy
- D. server protection proxy

Answer: A,B

Explanation:

In the exhibit, the SRX Firewall could be acting as a forward proxy, managing outbound internet requests from internal users or clients within a private network to the internet. Forward proxies are commonly used to control and monitor outbound traffic, provide content caching to improve load times, and enforce company policies.

The scenario can also imply a reverse proxy setup where the SRX Firewall might be configured to direct incoming requests from the internet to the web application. Reverse proxies are used to balance load, enhance security, manage SSL encryption, and provide additional caching functionalities for inbound traffic to servers.

NEW QUESTION # 84

You want to set up JSA to collect network traffic flows from network devices on your network.

Which two statements are correct when performing this task? (Choose two.)

- A. Statistical sampling increases processor utilization
- B. Superflows reduce traffic licensing requirements.
- C. BGP FlowSpec is used to collect traffic flows from Junos OS devices.
- D. Statistical sampling decreases event correlation accuracy.

Answer: B,D

Explanation:

Statistical sampling involves collecting a representative subset of data rather than examining all traffic.

While this method decreases processor utilization by reducing the volume of data that must be analyzed and stored, it can also lead to decreased accuracy in event correlation because not all events are captured.

Superflows in JSA are aggregated flow records that represent summaries of multiple flow records. This aggregation reduces the number of flows that need to be processed and stored, which can help in managing licensing requirements related to the volume of traffic being analyzed, especially in environments with high traffic volumes.

NEW QUESTION # 85

When a security policy is deleted, which statement is correct about the default behavior of active sessions allowed by that policy?

- A. The active sessions allowed by the policy will continue
- B. The active sessions allowed by the policy will be marked as a legacy flow and will continue to be forwarded.
- C. The active sessions allowed by the policy will be reevaluated by the cached
- D. The active sessions allowed by the policy will be dropped.

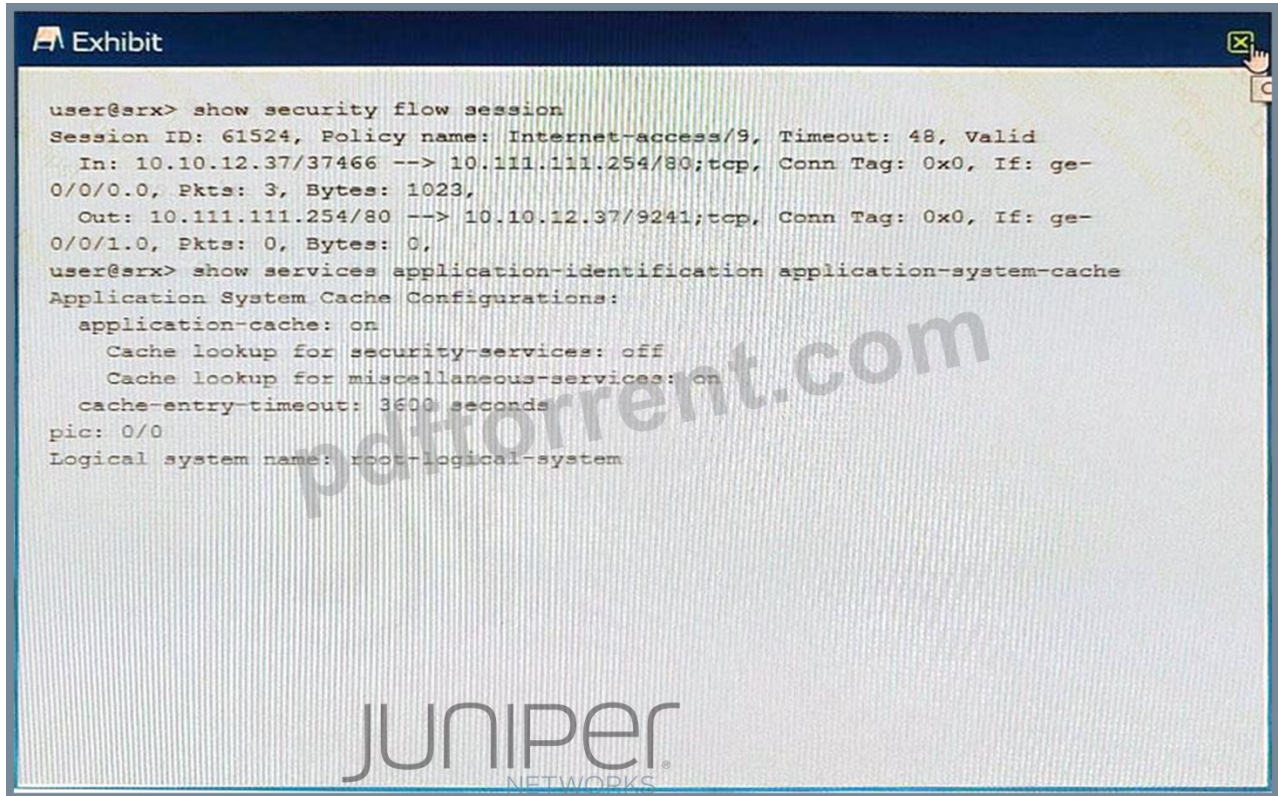

Answer: B

Explanation:

When a security policy is deleted, the existing sessions that were previously allowed by that policy are not immediately dropped; instead, they are typically treated as legacy flows. This means they are allowed to continue until they naturally end or until the session timeout is reached. This behavior ensures that deleting a policy does not abruptly disrupt ongoing traffic flows that were previously authorized by that policy. This approach helps in avoiding unintended service disruptions, especially in production environments where active connections may be critical to operations.

NEW QUESTION # 86

Exhibit

Referring to the exhibit which statement is true?

- A. SSL proxy must wait for return traffic for the final match to occur.
- B. SSL proxy functions will ignore the session.
- C. SSL proxy leverages pre-match result
- D. SSL proxy leverages post-match results.

Answer: A

NEW QUESTION # 87

On an SRX5800, which port is used for chassis cluster out-of-band management?

- A. user-defined
- B. fxp1
- C. ge-0/0/0
- D. Txp0

Answer: A
