

Efficient Huawei Valid Dumps H12-841_V1.5 Sheet & Perfect ExamcollectionPass - Leading Provider in Qualification Exams

BONUS!!! Download part of ExamcollectionPass H12-841_V1.5 dumps for free: <https://drive.google.com/open?id=1yN4PoZA6GVdfR6YpnNpI4JgVOWQzrJkq>

Thus, it leads to making your practice quite convenient. Huawei H12-841_V1.5 desktop software functions on Windows-based computers and works without a functional internet connection. Huawei H12-841_V1.5 Exam Questions always provide ease to their consumers. therefore, the committed team is present around the clock to fix any problem.

Huawei H12-841_V1.5 Exam Syllabus Topics:

Section	Objectives
Topic 1: Campus Network Planning, Design, and Deployment	
Topic 2: Campus Network Technology Details	
Topic 3: Intelligent Campus Network O&M	
Topic 4: Huawei Campus Network Solution Overview	
Topic 5: Campus Network and Common Technologies

New Valid Dumps H12-841_V1.5 Sheet 100% Pass | Pass-Sure H12-841_V1.5 Latest Demo: HCIP-Datacom-Campus Network Planning and Deployment V1.5

H12-841_V1.5 certification training of our website is a tool to help students reflect their own strength. In recent years, too many graduates of elite schools are unable to find jobs. College students face unemployment when they graduate. This is unexpected when college students have just entered the campus. H12-841_V1.5 Exam Torrent also helps students enter famous enterprises. With the

increasing numbers of university graduates, the prestigious school diploma is no longer a passport for entering a good company. In recruiting, the company pays more attention to the students' ability.

Huawei HCIP-Datacom-Campus Network Planning and Deployment V1.5 Sample Questions (Q104-Q109):

NEW QUESTION # 104

In Huawei's WAN bandwidth management solution, which of the following functions can "real-time statistics on bandwidth usage of each department and generate multi-dimensional reports (such as by day/by department)"?

- A. Bandwidth usage statistics and report analysis
- B. Bandwidth quota management
- C. Deduplication
- D. Application Traffic Shaping

Answer: A

NEW QUESTION # 105

In a WAN BGP protocol deployment, if it is necessary to "hide the local AS number when advertising routes to EBGP neighbors to avoid AS PATH leakage", which of the following strategies should be configured?

- A. Apply as-path-filter to the outbound direction of BGP neighbors to filter local AS numbers.
- B. Disable the AS_PATH attribute passing function in the BGP protocol.
- C. Configure BGP neighbor MD5 authentication and encrypt AS_PATH information.
- D. Enable BGP route aggregation and merge AS_PATH

Answer: A

NEW QUESTION # 106

(DHCP dynamically configures and centrally manages IP addresses of hosts. Which of the following statements about DHCP is false?)

- A. The Options field in DHCP messages uses the type-length-value (TLV) structure and can carry parameters such as the NTP server address, AC address, and log server address.
- B. If only the gateway and DNS server information needs to be delivered to a DHCP client, the DHCP Offer message sent by the DHCP server to the client does not carry the Options field.
- C. DHCP supports static IP address allocation, in which it assigns fixed IP addresses to specified terminals.
- D. When a DHCP client and a DHCP server are located on different Layer 3 networks, a DHCP relay agent is needed for forwarding packets between the DHCP client and server.

Answer: B

Explanation:

DHCP is a core protocol used in campus networks to automatically assign IP addresses and deliver network parameters to hosts, improving deployment efficiency and simplifying address management. DHCP messages include several fixed fields and an Options field, which plays a critical role in parameter delivery.

Option A is false. Even if only gateway and DNS server information needs to be delivered to a client, the DHCP Offer message must carry the Options field. Default gateway and DNS server information are delivered through specific DHCP options, such as Option 3 (Router) and Option 6 (DNS Server). Without the Options field, these parameters cannot be conveyed to the client.

Option B is correct. The Options field in DHCP messages uses a TLV (Type-Length-Value) format, allowing flexible extension and supporting various network parameters, including NTP server addresses, wireless AC addresses, and log server addresses, which aligns with HCIP Datacom Campus Network descriptions.

Option C is also correct. DHCP supports static IP address allocation by binding a specific IP address to a client's MAC address. This is commonly used for printers, servers, or network devices that require fixed IP addresses.

Option D is correct as well. Because DHCP uses broadcast messages that cannot cross Layer 3 boundaries, a DHCP relay agent is required when the client and server reside on different IP networks.

Therefore, option A is the only incorrect statement.

NEW QUESTION # 107

(Which of the following statements is false about sites on a virtualized network deployed using iMaster NCE- Campus?)

- A. A site is a tenant network created by a tenant administrator.
- **B. iMaster NCE-Campus does not support batch site creation.**
- C. iMaster NCE-Campus allows administrators to create sites one by one.
- D. Tenants configure and manage devices by site.

Answer: B

Explanation:

Comprehensive and Detailed 200 to 250 words of Explanation From HCIP Datacom Campus Network documents knowledge without any URL or Links:

In iMaster NCE-Campus-based virtualized campus networks, the site is a fundamental management object used to organize and manage network resources. A site typically represents a physical location or logical network scope, such as a campus, building, or branch, under a tenant. Tenants manage devices, configurations, and services by site, which makes statement B correct.

iMaster NCE-Campus allows administrators to create sites individually, enabling flexible deployment and incremental network construction. Therefore, statement C is correct. In addition, a site is created and owned by a tenant administrator to represent the tenant's network scope, making statement D correct.

Statement A is false. iMaster NCE-Campus does support batch site creation, which is commonly used in large-scale or MSP scenarios where many tenant sites or branch sites need to be deployed efficiently. Batch creation significantly reduces manual workload and improves deployment efficiency.

According to HCIP Datacom Campus Network documentation, site management supports both single-site creation and batch site creation, enabling scalable and centralized O&M. Therefore, the statement claiming that batch site creation is not supported is incorrect.

NEW QUESTION # 108

In Huawei's SD-WAN solution, for the scenario of "branch access to cross-border public clouds (such as AWS in North America)," which of the following technologies can "optimize cross-border link transmission performance and reduce cross-border latency"?

- A. Reduce cross-border transmission bandwidth and decrease link load.
- B. All cross-border cloud access is relayed through the domestic headquarters, increasing the length of the cross-border link.
- C. Access is only made using a regular internet connection; no cross-border optimization is performed.
- **D. SD-WAN Cross-border Acceleration Technology (Select optimized cross-border links and enable TCP acceleration)**

Answer: D

NEW QUESTION # 109

.....

Are you still staying up for the H12-841_V1.5 exam day and night? If your answer is yes, then you may wish to try our H12-841_V1.5 exam materials. We are professional not only on the content that contains the most accurate and useful information, but also on the after-sales services that provide the quickest and most efficient assistants. With our H12-841_V1.5 practice torrent for 20 to 30 hours, we can claim that you are ready to take part in your H12-841_V1.5 exam and will achieve your expected scores.
