성공을 위해 길을 찾고 실패를 위해 구실을 찾지 않는다는 말이 있습니다. Salesforce인증 Certified-Business-Analyst 시험이 영어로 출제되어 시험패스가 너무 어렵다 혹은 회사다니느라 공부할 시간이 없다는 등등은 모두 공부하기 싫은 구실에 불과합니다. Pass4Test의 Salesforce인증 Certified-Business-Analyst덤프만 마련하면 실패를 성공으로 바꿀 수

있는 기적을 체험할 수 있습니다. 제일 간단한 방법으로 가장 어려운 문제를 해결해드리는 것이 Pass4Test의 취지입니다.

## 최신 Salesforce Business Analyst Certified-Business-Analyst 무료 샘플문제 (Q124-Q129):

### 질문 # 124

Which method should a business analyst use to show current state business flows in Salesforce?

- A. Entity Relationship Diagramming
- B. Storyboarding
- C. Universal Process Notation

정답: C

#### 설명:

Universal Process Notation (UPN) is a method to show current state business flows in Salesforce. UPN is a process modeling technique that shows the flow of activities and decisions using simple symbols and plain language. It can help document existing processes in a clear and concise way that can be easily understood by anyone involved in the project. Entity Relationship Diagramming (ERD) is not a method to show current state business flows in Salesforce. ERD is a data modeling technique that shows the relationships among entities using symbols and attributes. It can help design database schemas or data structures for an application.

Storyboarding is not a method to show current state business flows in Salesforce. Storyboarding is a technique to help stakeholders visualize how a solution will work by creating sketches or mockups of the user interface and interactions. It can help elicit feedback and validate requirements for a proposed solution. References: 1

### 질문 # 125

Cloud Kicks (CK) recently decided to transition its business from spreadsheets to a Salesforce solution. CK leaders are excited about the capabilities of Salesforce. Each leader has different ideas about how the platform should be implemented. CK has hired a business analyst (BA) to help define and manage the implementation.

What should the BA do in the first discovery meeting with stakeholders?

- A. Collaborate with stakeholders to examine and define CK's purpose, customers, metrics, and overall business to inform project direction and vision.
- B. Discuss and document specific pain points in existing processes to inform future project requirements.
- C. Preview potential Salesforce solutions and collect feedback from stakeholders on each option to inform the direction of the project.

정답: A

#### 설명:

Explanation

The business analyst should do in the first discovery meeting with stakeholders is to collaborate with stakeholders to examine and define CK's purpose, customers, metrics, and overall business to inform project direction and vision. Discovery is a phase of a Salesforce project that aims to understand the current state of a business, identify its problems or needs, and define its goals or desired outcomes. In the first discovery meeting, the business analyst should work with stakeholders to establish a common understanding of CK's business context, such as its mission, vision, values, customers, competitors, performance indicators, etc. This can help the business analyst align stakeholders on a shared vision and strategy for the Salesforce implementation. Discussing and documenting specific pain points in existing processes may be part of discovery, but not in the first meeting. The business analyst should first understand the big picture of CK's business before diving into the details of its processes. Previewing potential Salesforce solutions and collecting feedback from stakeholders may be part of discovery, but not in the first meeting. The business analyst should first understand the problems or needs of CK's business before proposing any solutions. References:

### 질문 # 126

Universal Containers is currently doing user acceptance testing for a global customer service project that leverages Service Cloud. A

stakeholder is executing a test case for a specific user story. The stakeholder has provided this feedback:

- \* The functionality described in the test case is working as expected.
- \* The stakeholder wants to change the label of several fields described in the test case.
- \* The stakeholder wants to add two new fields that were excluded from the test case.

Which step should the business analyst take next?

- A. Acknowledge the feedback, update the existing user story to include the field changes, and assign the user story back to the technical team for immediate development.
- B. Acknowledge the feedback, create a new test case that includes the field changes, and assign the test case back to the stakeholder for immediate testing.
- **C. Acknowledge the feedback, create a new user Story that includes the field changes, and ask the stakeholder to update the existing test case to show it was successfully tested.**

**정답: C**

#### 질문 # 127

A business analyst (BA) is working with stakeholders at Universal Containers to walk through a potential solution for the lead routing and qualification process. The solution will include automated and manual features.

Which artifact should help the BA illustrate the vision of a solution to stakeholders?

- A. Collected pain points from people who follow the existing process
- **B. Annotated process flows with modifications to an existing process**
- C. Detailed user stories with technical documentation about the existing process

**정답: B**

#### 설명:

Annotated process flows are a great way to illustrate the vision of a solution to stakeholders. They can show the current state of the process, the proposed changes, and the benefits of the changes. This can help stakeholders understand the solution and why it is needed.

Here are some additional details from Salesforce Certified Business Analyst documents and resources that support the answer:

- \* Annotated process flows are process flows that include additional information, such as notes, comments, and explanations.
- \* Modifications to an existing process are changes that are made to an existing process.
- \* Stakeholders are people who have an interest in the success of a project.

In conclusion, annotated process flows with modifications to an existing process are a great way to illustrate the vision of a solution to stakeholders. They can show the current state of the process, the proposed changes, and the benefits of the changes. This can help stakeholders understand the solution and why it is needed.

An artifact that can help the business analyst illustrate the vision of a solution to stakeholders is annotated process flows with modifications to an existing process. Annotated process flows are diagrams that show how a process works step by step, with notes or comments that explain the logic or rationale behind each step.

They can help the business analyst show how the lead routing and qualification process will change or improve with the new solution, and invite feedback or validation from stakeholders. Detailed user stories with technical documentation about the existing process are artifacts that can help the business analyst capture the requirements or specifications of the new solution, but not illustrate the vision of it. Collected pain points from people who follow the existing process are artifacts that can help the business analyst understand the problems or needs of the end users, but not illustrate the vision of the solution. #### 질문 # 128

Sales leadership at 230Cloud Kicks (CK) is concerned about the limited adoption of Salesforce at the company. Salesforce implementation includes many custom pages. Multiple users have complained about waiting a long time for key functionality to display

- A. Run the Lightning page layout.
- B. Enable Debug Logs.
- **C. Monitor the Lightning Usage App.**

**정답: C**

## 설명:

The business analyst should monitor the Lightning Usage App to address the concern of sales leadership about the limited adoption of Salesforce at Cloud Kicks. The Lightning Usage App is a tool that tracks and reports on how users are engaging with Salesforce in Lightning Experience. The Lightning Usage App can help measure and improve user adoption by showing metrics such as daily and monthly active users, usage by browser and device type, usage by profile and permission set, feature adoption, performance, and feedback.

The business analyst should monitor the Lightning Usage App to identify trends, patterns, issues, or opportunities related to user adoption and take actions accordingly. Running the Lightning page layout is not an action that the business analyst should take to address the concern of sales leadership about the limited adoption of Salesforce at Cloud Kicks. Running the Lightning page layout is a process that optimizes a page layout for Lightning Experience by removing unsupported components, adding supported components, and rearranging components based on best practices. Running the Lightning page layout can help improve user experience and satisfaction but does not measure or improve user adoption directly. Enabling Debug Logs is not an action that the business analyst should take to address the concern of sales leadership about the limited adoption of Salesforce at Cloud Kicks. Enabling Debug Logs is a process that captures information about database operations, system processes, and errors that occur when executing a transaction or running unit tests.

Enabling Debug Logs can help troubleshoot issues and errors but does not measure or improve user adoption directly. References: <https://trailhead.salesforce.com/en/content/learn/modules/lightning-experience-rollout/lightning-experience-rollo>

## 질문 # 129

.....

많은 분들이 Salesforce Certified-Business-Analyst 시험을 패스하려고 하는데 시험대비방법을 찾지 못하고 계십니다. Salesforce Certified-Business-Analyst 덤프를 구매하려면 먼저 Salesforce Certified-Business-Analyst 샘플문제를 다운받아 덤프 품질을 검증후 주문하시면 믿음이 생길것입니다. Salesforce Certified-Business-Analyst 시험대비덤프는 IT 업계에 오랜 시간동안 종사한 전문가들의 노하우로 연구해낸 최고의 자료입니다.
