1Z0-1072-25 Exam Study Guide & 1Z0-1072-25 Latest Dumps Sheet

DOWNLOAD the newest TrainingDump 1Z0-1072-25 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1zs4Z0_K4PqTyYm9iEx90wmXV8Adue_fw

As a matter of fact, long-time study isn't a necessity, but learning with high quality and high efficient is the key method to assist you to succeed. We provide several sets of 1Z0-1072-25 test torrent with complicated knowledge simplified and with the study content easy to master, thus limiting your precious time but gaining more important knowledge. Our study materials are cater every candidate no matter you are a student or office worker, a green hand or a staff member of many years' experience, 1Z0-1072-25 Certification Training is absolutely good choices for you. Therefore, you have no need to worry about whether you can pass the exam, because we guarantee you to succeed with our technology strength.

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block • File • Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.
Topic 2	• Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN • FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.

Topic 3	• Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources
Topic 4	• Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.

1Z0-1072-25 Latest Dumps Sheet, 1Z0-1072-25 Valid Test Preparation

TrainingDump Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) questions in three formats is an invaluable resource for preparing for the 1Z0-1072-25 exam and achieving the Oracle certification. With customizable 1Z0-1072-25 practice exams, up-to-date 1Z0-1072-25 questions, and user-friendly formats, TrainingDump is the perfect platform for clearing the Oracle 1Z0-1072-25 test. So, try the demo version today and unlock the full potential of TrainingDump Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam dumps after payment, taking one step closer to your career goals.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q20-Q25):

NEW QUESTION # 20
Which TWO statements about the Oracle Cloud Infrastructure (OCI) File Storage Service are accurate?

- A. File systems use Oracle-managed keys by default.
- B. Communication with file systems in a mount target is encrypted via HTTPS.
- C. Customers can encrypt the communication to a mount target via export options.
- D. Customers can encrypt data in their file system using their own Vault encryption key.

Answer: A,D

Explanation:
Oracle Cloud Infrastructure (OCI) File Storage Service offers robust encryption capabilities to ensure data security.
B . Customer-Managed Encryption: Customers can choose to encrypt their data using their own keys stored in the OCI Vault service. This gives customers control over their encryption keys and enhances data security.
D . Oracle-Managed Encryption: By default, all data stored in OCI File Storage is encrypted using Oracle-managed keys. This ensures that data is encrypted at rest without requiring any action from the customer.
Incorrect Statements:
A . Communication is not encrypted via HTTPS when accessing file systems; instead, encryption in transit is typically managed via NFS over TLS.
C . Encryption of communication to a mount target is handled via network configurations, not through export options.

Oracle Cloud Infrastructure Documentation: File Storage Encryption

NEW QUESTION # 21
What is a key advantage of utilizing administrator roles for access control within OCI IAM identity domains?

- A. Simplify access management by eliminating policy creation
- B. Can be used to grant access to resources outside the identity domain
- C. Offer a wider range of permission combinations
- D. Provide granular control over user access to specific compartments

Answer: A

Explanation:
In Oracle Cloud Infrastructure (OCI) Identity and Access Management (IAM), administrator roles play a significant role in managing access:
Simplification of Access Management: Utilizing administrator roles allows you to simplify access management by eliminating the need to create complex IAM policies manually. These roles come with predefined permissions that cover common administrative tasks, reducing the effort needed to manage access controls.
Granular Control: While administrator roles provide a broad range of permissions, they may not offer the same level of granularity as custom policies.
Other Benefits:
Offer a wider range of permission combinations (A): While custom policies can offer more specific combinations, administrator roles are designed to cover a broad range of tasks.
Granting Access Outside Identity Domain (C): Administrator roles are generally scoped to their identity domain and do not provide cross-domain access.
Granular Control (D): Although administrator roles simplify management, custom policies are typically used when granular control over specific compartments or resources is needed.
Relevant OCI Documentation:
OCI IAM Roles Overview
This resource provides detailed information on how roles and policies are used in OCI to manage access.

NEW QUESTION # 22
Which statement is NOT true about the Oracle Cloud Infrastructure (OCI) Object Storage service?

- A. Object lifecycle rules can be used to archive or delete objects.
- B. Object Versioning is enabled at the namespace level.
- C. Object Storage resources can be shared across tenancies.
- D. Immutable option for data stored in Object Storage can be set via retention rules.

Answer: C

Explanation:
Oracle Cloud Infrastructure (OCI) Object Storage is a scalable, highly durable service that allows you to store any type of data in a secure and cost-effective manner. The correct and incorrect statements regarding OCI Object Storage are as follows:
A . Immutable Option: You can indeed set an immutable option for data in Object Storage using retention rules. This feature ensures that once data is written, it cannot be modified or deleted until the retention period expires, making it ideal for regulatory compliance.
C . Object Lifecycle Rules: Object lifecycle policies allow you to automate the archiving or deletion of objects based on their age or other criteria, helping manage storage costs and data retention efficiently.
D . Object Versioning: Versioning is enabled at the bucket level, not the namespace level. However, once enabled for a bucket, it helps retain, retrieve, and restore every version of every object stored in that bucket.
B . Object Storage Sharing Across Tenancies: This statement is not true. OCI Object Storage buckets and objects are specific to a tenancy and cannot be shared across different tenancies directly. Access to Object Storage resources is controlled within a single tenancy through IAM policies.
Relevant OCI Documentation:
OCI Object Storage Overview
Object Lifecycle Management
These references provide details on how Object Storage functions and the features available.

NEW QUESTION # 23
Which TWO statements are true about performing a multipart upload using the Multipart Upload API?

- A. You do not have to commit the upload after uploading all parts.
- B. You can keep adding parts as long as the total number is less than 10,000.
- C. You do not need to split the object into parts.
- D. Each part can be as large as 50 GIB.

Answer: B,D

Explanation:
When performing a multipart upload using the Multipart Upload API in Oracle Cloud Infrastructure (OCI) Object Storage, the following points are true:

C . Each part can be as large as 50 GiB: OCI allows each part of a multipart upload to be up to 50 GiB in size. This enables the efficient uploading of large objects in smaller, manageable parts.

D . You can keep adding parts as long as the total number is less than 10,000: The Multipart Upload API supports up to 10,000 parts for a single object. This allows the upload of very large objects by dividing them into multiple parts.

Incorrect Statements:

A . After uploading all parts, you must commit the upload to finalize the multipart upload and combine all parts into a single object.

B . The object must be split into parts before uploading when using the Multipart Upload API.

Oracle Cloud Infrastructure Documentation: Multipart Uploads

NEW QUESTION # 24

Which THREE protocols are supported by the Oracle Cloud Infrastructure (OCI) private Network Load Balancers?

- A. TCP
- B. BGP
- C. ICMP
- D. iSCSI
- E. UDP
- F. HTTP

Answer: A,E,F

Explanation:

The OCI Private Network Load Balancer supports multiple protocols for managing traffic efficiently across your instances within a private subnet. Specifically, it supports:

UDP (User Datagram Protocol): Commonly used for applications that require fast, connectionless communication, such as video streaming or DNS services.

TCP (Transmission Control Protocol): A reliable, connection-oriented protocol, widely used for web traffic and other applications requiring data integrity.

HTTP (Hypertext Transfer Protocol): Frequently used for web traffic, it is an application-layer protocol built on top of TCP and enables communication between web browsers and servers.

The combination of these protocols allows the OCI Network Load Balancer to manage diverse workloads, including web services and real-time applications.

NEW QUESTION # 25

......

TrainingDump's experts have simplified the complex concepts and have added examples, simulations and graphs to explain whatever could be difficult for you to understand. Therefore even the average 1Z0-1072-25 exam candidates can grasp all study questions without any difficulty. Additionally, the 1Z0-1072-25 Exam takers can benefit themselves by using our testing engine and get numerous real 1Z0-1072-25 exam like practice questions and answers. They will help them revising the entire syllabus within no time.
