NEW QUESTION # 119

Universal Containers (UC) uses out-of-the-box order management, that has a Master-Detail relationship between Order and Order Line Item.

UC stores the availability date on each Order Line Item and Orders are only shipped when all of the Order Line Items are available. Which method should be used to calculate the estimated ship date for an Order?

- A. Use a MAX Roll-Up Summary field on the latest availability date fields.
- B. Use a CEILING formula on each of the latest availability date fields.
- C. Use @ DAYS formula on each of the availability date fields and a COUNT Roll-Up Summary field on the Order.
- D. Use 2 LATEST formula on each of the latest availability date fields.

Answer: A

Explanation:
* Roll-Up Summary Field:
* Since the relationship between Order and Order Line Item is a Master-Detail, a Roll-Up Summary field can be used on the Order object.
* The MAX function in a Roll-Up Summary field calculates the latest date (the maximum value) among all the availability dates on the Order Line Items.
* Why MAX Roll-Up Summary Field Works:
* The latest availability date among the Order Line Items will determine when the entire Order can be shipped.
* Why Not Other Options?
* A and B: There is no such formula called "LATEST" or "CEILING" applicable to date fields.
* C: A COUNT Roll-Up Summary is irrelevant for calculating dates.
