SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite 認定 C_BCBTP_2502 試験問題 (Q21-Q26):

質問 # 21

Which SAP BTP component helps businesses extract insights from structured and unstructured data?

- A. SAP SuccessFactors
- B. SAP Business Network
- C. SAP Integration Suite
- **D. SAP Data Intelligence**

正解: D

解説:

In today's data landscape, business value is hidden not just in "structured" databases (like tables and spreadsheets) but also in "unstructured" data (like images, sensor logs, and social media feeds). SAP Data Intelligence is the specific component of SAP BTP designed to manage this diversity. It is a comprehensive data management solution that provides data orchestration, data cataloging, and powerful machine learning integration. It allows data scientists and engineers to create "data pipelines" that ingest, transform, and analyze data regardless of its source or format.

The role of SAP Data Intelligence within the SAP Business Suite is to turn "dark data" into actionable insights. For example, it can take unstructured maintenance logs from factory machinery and combine them with structured financial data to predict the total cost of ownership of an asset. By providing a unified view of the entire data landscape-whether that data resides in an SAP HANA database, a non-SAP data warehouse, or a cloud "data lake"-it ensures that decision-makers have a complete picture. This capability is vital for advanced AI and machine learning projects, as it provides the robust data foundation required to train accurate models, thereby positioning SAP BTP as a leader in enterprise data orchestration.

質問 # 22

Which SAP BTP services support AI-driven automation? (Choose two).

- A. SAP Concur
- B. SAP Business Network
- **C. SAP AI Core**
- **D. SAP Business Process Intelligence**

正解: C、D

解説:

AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models-from training to deployment- at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.

Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

質問 # 23

Which market trend is driving the adoption of SAP BTP?

- A. Decreasing focus on API-based integrations.
- B. Declining use of cloud-based solutions.
- C. Increased need for data-driven decision-making.
- D. Reduced emphasis on business automation.

正解: C

解説:

One of the most powerful market trends driving the global adoption of SAP BTP is the increased need for data-driven decision-making. In today's hyper-competitive landscape, "gut feeling" is no longer a viable strategy for business leaders. Organizations are sitting on mountains of data, but the challenge lies in extracting actionable insights from it. SAP BTP addresses this trend by providing a unified environment where data management, analytics, and AI converge. This allows businesses to transform raw data into a strategic asset, enabling more accurate forecasting, optimized operations, and enhanced customer experiences.

This trend is further accelerated by the "Digital Transformation" movement, where companies are moving away from monolithic, isolated systems toward agile, interconnected platforms. Businesses now demand real-time visibility across their entire value chain from procurement to sales. SAP BTP's ability to integrate disparate systems and provide a "single source of truth" through SAP HANA Cloud and SAP Analytics Cloud directly addresses this market demand. As companies strive to become "Intelligent Enterprises," they rely on BTP to provide the technical infrastructure that supports continuous innovation, rapid automation, and the ability to pivot their business models based on data-driven evidence rather than historical assumptions.

質問 # 24

Which SAP BTP component supports microservices-based application development?

- A. SAP Concur
- B. SAP SuccessFactors
- C. SAP Business Network
- D. SAP Kyma Runtime

正解: D

解説:

As enterprises move toward modern, scalable application architectures, the move from monolithic codebases to microservices becomes essential. SAP Kyma Runtime is the specific component of SAP BTP designed to support this transition. It is a fully managed Kubernetes-based environment that allows developers to extend SAP applications using serverless functions and microservices. Kyma provides a cloud-native way to build and run containerized applications, offering high scalability and flexibility. Positioning Kyma within the SAP Business Suite ecosystem is critical for "side-by-side" extensibility. It allows developers to build specialized services such as a custom loyalty engine or a unique logistics tracker using their preferred programming languages and frameworks (like Node.js, Go, or Python) while maintaining a seamless connection to the SAP core. Kyma is particularly powerful for "event-driven" architectures; it can listen for events in SAP S/4HANA (like a "New Sales Order created" event) and instantly trigger a microservice to perform a specific action in a third-party system. This decouples the innovation layer from the stable core, allowing for rapid updates and deployments without risking the stability of the primary business processes.

質問 # 25

Which SAP BTP service supports real-time financial data analysis for banking and finance industries?

- A. SAP Conversational AI
- B. SAP Business Network
- C. SAP HANA Cloud
- D. SAP Fieldglass

正解: C

解説:

For the banking and finance industries, the ability to process and analyze data in real-time is not just an advantage—it is a regulatory and operational necessity. SAP HANA Cloud is the foundational BTP service that supports this requirement. Due to its advanced in-memory computing architecture, HANA Cloud allows financial institutions to perform complex risk assessments, liquidity

monitoring, and fraud detection on live transactional data.

In the context of the SAP Business Suite for Finance, HANA Cloud eliminates the latency associated with traditional data warehousing. Financial analysts can run "what-if" simulations and "instant closes" directly on the production data set. This real-time capability is essential for managing market volatility and meeting stringent reporting deadlines. Furthermore, HANA Cloud's multi-model processing allows it to handle not just standard relational data, but also spatial and graph data, which are increasingly used in modern financial services for relationship mapping and anti-money laundering (AML) initiatives. By positioning HANA Cloud as the central data engine, SAP BTP provides the high-performance infrastructure needed to power the next generation of digital banking services.
