

# Latest Integration-Architect - Exam Salesforce Certified Integration Architect Objectives Pdf

BONUS!!! Download part of DumpsTorrent Integration-Architect dumps for free: <https://drive.google.com/open?id=1s2XhZF88r-2AGtMsGjxx4jPgdkc-S9r2>

Our Integration-Architect practice engine is admired by all our customers for our experts' familiarity and dedication with the industry all these years. By their help, you can qualify yourself with high-quality Integration-Architect exam materials. Our experts pass onto the exam candidate their know-how of coping with the exam by our Integration-Architect Training Questions. And i can say that our Integration-Architect study guide is the unique on the market for its high-effective.

The actual Salesforce Integration-Architect exam questions are in PDF format for the one who wants to study offline. The actual Salesforce Integration-Architect exam questions are in simple PDF form. The PDF format is suitable both for smartphones as well as tablets. You can print documents and study anywhere. The plus point is that the PDF version is updated regularly to improve its Integration-Architect Exam Questions and reflect changes in the syllabus of the exam.

## New APP Integration-Architect Simulations & Integration-Architect Exam Review

In recent years, some changes are taking place in this line about the new points are being constantly tested in the Integration-Architect real exam. So our experts highlights the new type of questions and add updates into the Integration-Architect practice materials, and look for shifts closely when them take place. At the same time, as we can see that the electronic devices are changing our life day by day, our Integration-Architect study questions are also developed to apply all kinds of electronic devices.

## Salesforce Certified Integration Architect Sample Questions (Q103-Q108):

### NEW QUESTION # 103

Northern Trail Outfitters uses a custom Java application to display code coverage and test results for all of their enterprise applications and is planning to include Salesforce as well.

Which Salesforce API should an Integration Architect use to meet the requirement?

- A. Tooling API
- B. Analytics REST API
- C. SOAP API
- D. Metadata API

**Answer: A**

Explanation:

Explanation

Option D is correct because Tooling API is the Salesforce API that can be used to retrieve code coverage and test results for Apex

classes and triggers. Tooling API provides REST and SOAP interfaces to access metadata about code, execute tests, and get test results<sup>12</sup> Option A is incorrect because SOAP API is a Salesforce API that can be used to create, retrieve, update, or delete records, but not to get code coverage and test results. SOAP API uses a WSDL file to define the parameters for accessing data through the API<sup>13</sup> Option B is incorrect because Analytics REST API is a Salesforce API that can be used to access data from reports and dashboards, but not from code coverage and test results. Analytics REST API provides a programmatic way to interact with analytics features such as lenses, datasets, and dashboards<sup>4</sup> Option C is incorrect because Metadata API is a Salesforce API that can be used to retrieve, deploy, create, update, or delete customization information, such as custom object definitions and page layouts, but not code coverage and test results. Metadata API is mainly used for development tools or backup tools<sup>5</sup> References: 1: Introducing Tooling API 2: Tooling API Examples 3: SOAP API Developer Guide 4: Analytics REST API Developer Guide 5: Metadata API Developer Guide

#### NEW QUESTION # 104

Northern Trail Outfitters needs to secure an integration with an external Microsoft Azure API Gateway. What integration security mechanism should be employed?

- A. Configure mutual server authentication with two-way SSL using CA issued certificates.
- B. Use an API only user profile and implement use an external identity provider with federated API access.
- C. Implement Salesforce Shield with Encryption at Rest and generate a tenant secret.
- **D. Configure a connected app with an authorization endpoint of the API gateway and configure OAuth settings.**

**Answer: D**

Explanation:

The OAuth protocol is a standard way to authorize access to web resources. By configuring a connected app with an authorization endpoint of the API gateway, Salesforce can obtain an access token from the API gateway and use it to invoke the external API securely. This avoids the need to manage certificates or user credentials for authentication<sup>2</sup> References: 1: Data Virtualization Pattern 2: OAuth 2.0 WebServer Authentication Flow

#### NEW QUESTION # 105

Northern Trail Outfitters (NTO) has recently changed its Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.

Which consideration should an integration architect evaluate before choosing a middleware solution?<sup>12</sup>

- A. The middleware solution is able to interface directly with databases via an<sup>5</sup> Open Database Connectivity (ODBC) connection string.
- **B. An API Gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.**
- C. The middleware solution enforces the OAuth security protocol.

**Answer: B**

Explanation:

In modern enterprise architecture, securing the boundary between cloud environments like Salesforce and on-premise data centers is a critical responsibility of the Integration Architect. When Corporate Security Guidelines mandate that all traffic must pass through a secure firewall, the architecture must support a Demilitarized Zone (DMZ) or "Perimeter Network" strategy.

An API Gateway or a specialized middleware connector acts as the "front door" for these on-premise resources. The architect must evaluate whether the chosen middleware solution supports a distributed deployment model where the gateway component can reside within the DMZ. This setup allows the organization to terminate external (cloud) connections in a hardened environment before the traffic is inspected and proxied to the internal, trusted network.

While supporting OAuth (Option C) is essential for modern authentication, it does not satisfy the specific network-level firewall requirement described. Similarly, ODBC connections (Option B) are low-level database protocols that usually operate deep within the internal network and would typically be considered a security risk if exposed directly to a firewall.

By ensuring the middleware has an architecturally compatible gateway for the DMZ, the architect provides a solution that allows for deep packet inspection, IP whitelisting, and rate limiting at the edge of the corporate network. This approach aligns with the "Defense in Depth" principle, ensuring that Salesforce can securely communicate with legacy systems (like SAP or internal databases) without exposing those systems directly to the public internet, thereby satisfying the new Corporate Security Guidelines.

### NEW QUESTION # 106

business requires automating the check and update of the phone number type classification (mobile vs. landline) for all in-coming calls delivered to their phone sales agents. The following conditions exist:

1. At peak, their call center can receive up to 100,000 calls per day.
2. The phone number type classification is a service provided by an external service API.
3. Business is flexible with timing and frequency to check and update the records (throughout the night or every 6-12 hours is sufficient).

A Remote-Call-In pattern and/or Batch Synchronization (Replication via ETL: System -> Salesforce) are determined to work with a middleware hosted on custom premise.

In order to implement these patterns and mechanisms, which component should an integration architect recommend?

- A. IoConfigure Remote Site Settings in Salesforce to authenticate the middleware.
- B. Firewall and reverse proxy are required to protect internal APIs and resource being exposed.
- C. An API Gateway that authenticates requests from Salesforce into the Middleware (ETL/ESB).
- **D. ConnectedApp configured in Salesforce to authenticate the middleware.**

**Answer: D**

Explanation:

A Connected App is a framework that enables an external application to integrate with Salesforce using APIs and standard protocols, such as OAuth. By configuring a Connected App in Salesforce, the integration can authenticate the middleware and grant access to the Salesforce data and services. This is a secure and flexible solution that does not require configuring Remote Site Settings, API Gateway, or Firewall and reverse proxy.<sup>2</sup> References: 1: Batch Apex Error Event 2: Connected Apps

### NEW QUESTION # 107

A business requires automating the check and updating of the phone number type classification (mobile vs. landline) for all incoming calls delivered to its phone sales agents. The following conditions exist:

- \* At peak, the call center can receive up to 100,000 calls per day.
- \* The phone number type classification is a service provided by an external service API.
- \* Business is flexible with timing and frequency to check and update the records (throughout the night or every 6-12 hours is sufficient).

A Remote-Call-In pattern and/or Batch Synchronization (Replication via ETL: System -> Salesforce) are determined to work with a middleware hosted on customer premise. In order to implement these patterns and mechanisms, which component should an integration architect recommend?

- **A. ConnectedApp configured in Salesforce to authenticate the middleware**
- B. An API Gateway that authenticates requests from Salesforce into the middleware (ETL/ESB)
- C. Remote Site Settings configured in Salesforce to authenticate the middleware

**Answer: A**

Explanation:

In this scenario, the architecture involves a Remote-Call-In pattern or Batch Synchronization, where an external system (the middleware or ETL tool) initiates communication with Salesforce to update records. For any external system to securely access Salesforce APIs and perform these updates, it must be authenticated and authorized.

The Connected App is the foundational framework that allows an external application to integrate with Salesforce using APIs and standard protocols, such as OAuth 2.0 and SAML. By configuring a Connected App, the architect can define which permissions (Scopes) the middleware has, such as the ability to access data via the REST or Bulk API. This is the correct choice because the middleware needs to "log in" to Salesforce to push the phone classification data back into the Account or Contact records.

Option B, an API Gateway, is typically used to manage and secure requests going out of an organization to external services, or to provide a facade for on-premise APIs; it does not handle the inbound authentication into Salesforce itself. Option C, Remote Site Settings, is a configuration used solely to permit Salesforce to make outbound calls to a specific external URL (for example, if Salesforce were calling the phone classification service directly via Apex).

Given that the business is flexible with timing (allowing for nightly or 12-hour syncs) and handles 100,000 calls, a Batch Synchronization pattern via an ETL tool is highly efficient. The ETL tool will authenticate against the Connected App using a secure OAuth flow (such as the JWT Bearer Flow for server-to-server integration), retrieve the new phone numbers, call the external classification API, and then bulk-update the Salesforce records. This setup ensures a secure, scalable, and manageable integration that respects Salesforce's security architecture while meeting the high-volume data requirements of the call center.

## NEW QUESTION # 108

.....

The page of our Integration-Architect simulating materials provides demo which are sample questions. The purpose of providing demo is to let customers understand our part of the topic and what is the form of our Integration-Architect study materials when it is opened? In our minds, these two things are that customers who care about the Integration-Architect Exam may be concerned about most. We will give you our software which is a clickable website that you can visit the product page.

**New APP Integration-Architect Simulations:** <https://www.dumpstorrent.com/Integration-Architect-exam-dumps-torrent.html>

Just take action to purchase we would be pleased to make you the next beneficiary of our Integration-Architect exam practice, Integration-Architect test engine need JAVA system support and it is only downloaded and installed on the Windows operating system and personal computer, The Salesforce Integration-Architect is a fundamental of the career structure, Salesforce Exam Integration-Architect Objectives Pdf Third Step: Be encouraged to take the exam and pass at your first attempt.

Like alphabetizing your CD collection, or worse, arranging your socks, So the PDF version of the Integration-Architect pass-king materials has less limitation, Just take action to purchase we would be pleased to make you the next beneficiary of our Integration-Architect Exam Practice.

## Pass Guaranteed Salesforce - Integration-Architect - Professional Exam Salesforce Certified Integration Architect Objectives Pdf

Integration-Architect test engine need JAVA system support and it is only downloaded and installed on the Windows operating system and personal computer, The Salesforce Integration-Architect is a fundamental of the career structure.

Third Step: Be encouraged to take the exam and pass at your first attempt, Integration-Architect So don't hesitate to buy our {Examcode} test torrent, we will give you the high-quality product and professional customer services.
