ServiceNow Certified System Administrator Sample Questions (Q267-Q272):

NEW QUESTION # 267

What is the path an Administrator could take to view the fulfillment stage task list for an order placed by a user?

- A. REQ (Number)>RITM (Number)>TASK (Number)
- B. REQ (Number)>RITM (Number)>PROCUREMENT (Number)
- C. RITM (Number)>REQ (Number)>PROCUREMENT (Number)
- D. FULFILLMENT (Number)>RITM (Number)>TASK (Number)

Answer: A

NEW QUESTION # 268

The Report Designer contains different sections for configuring your report. Which section is used to adjust the look of your report, including colors, files, and legend layout?

- A. Format
- B. Layout
- C. Style
- D. Configure

Answer: D

NEW QUESTION # 269

What needs to be specified, when creating a Business Rule? (Choose four.)

- A. Table
- B. Script to run
- C. Update set
- D. Fields to update
- E. Application scope
- F. Who can run
- G. Timing
- H. Condition to evaluate
- I. UI action

Answer: A,B,G,H

Explanation:

A Business Rule in ServiceNow is a server-side script that executes when records are inserted, updated, deleted, or queried in a specified table. Business Rules allow automation and customization of workflows by defining logic that runs under specific conditions.

Table (B) -Correct

A Business Rule must be associated with a specific table where it will execute (e.g., Incident, Change, Task).

This determines which records the rule applies to.

Script to Run (E) -Correct

A script must be provided when defining advanced logic in a Business Rule.

Business Rules use server-side JavaScript to perform various actions, such as setting field values, enforcing validation, or triggering workflows.

Timing (H) -Correct

The execution timing of a Business Rule determines when it runs relative to a database transaction.

Business Rules can run:

Before (before record is saved)

After (after record is saved)

Async (after the transaction completes)

Display (when a form loads)

Condition to Evaluate (I) -Correct

Conditions define when the Business Rule should execute based on specific criteria.

Example: A Business Rule might run only when the priority is set to High.

A: UI Action (Incorrect)

UI Actions (buttons, links, context menus) are separate from Business Rules and are used for UI customization.

C: Fields to update (Incorrect)

While Business Rules can update fields, you do not specify "fields to update" as a required setting. Instead, updates are made via scripts within the rule.

D: Who can run (Incorrect)

Business Rules always run on the server-side and do not require user-specific execution settings.

F: Application Scope (Incorrect)

Although Business Rules belong to an application scope, this is automatically determined based on the current application.

G: Update Set (Incorrect)

Business Rules are captured in an Update Set, but this is not a configuration setting while creating the rule.
