According to the statistic about candidates, we find that some of them take part in the ISQI exam for the first time. Considering the inexperience of most candidates, we provide some free trail for our customers to have a basic knowledge of the CT-GenAI exam guide and get the hang of how to achieve the CT-GenAI Exam Certification in their first attempt. You can download a small part of PDF demo, which is in a form of questions and answers relevant to your coming CT-GenAI exam; and then you may have a decision about whether you are content with it. Our CT-GenAI exam questions are worthy to buy.

Unlike other kinds of exam files which take several days to wait for delivery from the date of making a purchase, our CT-GenAI study materials can offer you immediate delivery after you have paid for them. The moment you money has been transferred to our account, and our system will send our CT-GenAI training dumps to your mail boxes so that you can download CT-GenAI exam questions directly. It is fast and convenient out of your imagination.

As we all know, a lot of efforts need to be made to develop a CT-GenAI learning prep. Firstly, a huge amount of first hand materials are essential, which influences the quality of the compilation about the CT-GenAI actual test guide. We have tried our best to find all

reference books. Then our experts have carefully summarized all relevant materials of the CT-GenAI exam. Also, annual official test is also included. They have built a clear knowledge frame in their minds before they begin to compile the CT-GenAI Actual Test guide. It is a long process to compilation. But they stick to work hard and never abandon. Finally, they finish all the compilation because of their passionate and persistent spirits. So you are lucky to come across our CT-GenAI exam questions.

ISQI ISTQB Certified Tester Testing with Generative AI (CT-GenAI) v1.0 Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which competency MOST helps testers steer LLMs to produce useful, on-policy testware?

- A. Designing custom CPU instructions
- B. Writing low-level device drivers
- C. Configuring network routers
- **D. Mastering prompt engineering**

Answer: D

Explanation:

As Generative AI becomes integrated into the software testing lifecycle, the role of the tester shifts from manual authoring to the "orchestration" of AI models. Mastering prompt engineering is the primary competency required to effectively steer LLMs. Prompt engineering involves the deliberate design of inputs- incorporating roles, context, instructions, and constraints-to elicit the most accurate and "on-policy" outputs from the model. In a testing context, "on-policy" refers to testware that adheres to organizational standards, security protocols, and specific project requirements. While technical skills like network configuration or low-level programming (Options B, C, and D) are valuable in specific engineering domains, they do not directly influence the communicative interface between the human and the AI. A tester proficient in prompt engineering can utilize techniques like "Chain-of-Thought" or "Few-shot prompting" to ensure the LLM understands the nuances of a test plan, thereby reducing hallucinations and ensuring the generated test cases are actionable, relevant, and compliant with the project's quality gates.

NEW QUESTION # 11

A prompt begins: "You are a senior test manager responsible for risk-based test planning on a payments platform." Which component is this?

- A. Instruction
- B. Constraints
- C. Context
- **D. Role**

Answer: D

Explanation:

In structured prompt engineering, theRolecomponent (also known as a Persona) is used to set the perspective, expertise, and tone of the LLM's response. By assigning the role of a "senior test manager," the tester instructs the model to adopt the specific domain knowledge, vocabulary, and professional standards associated with that position. This technique is highly effective because LLMs are trained on vast datasets containing diverse professional documents; invoking a specific persona helps the model narrow its "latent space" to retrieve information relevant to that specific field. For instance, a senior test manager persona will prioritize risk management, resource allocation, and high-level strategy, whereas a "junior developer" persona might focus more on syntax and local unit tests. WhileContext(Option B) provides the background of the project andInstruction(Option A) defines the specific task to be performed, theRoleserves as the foundation for how those instructions are interpreted. This ensures the generated testware aligns with the expected professional seniority and organizational maturity required for high-stakes environments like a payments platform.

NEW QUESTION # 12

You are using an LLM to assist in analyzing test execution trends to predict potential risks. Which of the following improvements would BEST enhance the LLM's ability to predict risks and provide actionable alerts?

- A. Add an instruction to calculate statistical variance and highlight tests that deviate by more than 20% from baseline metrics.
- B. Specify that the role is a test analyst with expertise in predictive analytics and risk management.

- C. Expand the output format to include risk predictions with severity levels, recommended actions, and a timeline for team intervention based on trend analysis.
- D. Emphasize constraints that focus on deviations that could impact release timelines or quality gates.

Answer: C

Explanation:

The effectiveness of an LLM is heavily dependent on the specificity of its Output Format. While role definition (Option C) and technical instructions (Option D) are helpful, the most significant "value add" for a test lead is receiving information that is directly actionable. By expanding the output format to include structured risk predictions, severity levels, and recommended actions (Option B), the tester is forcing the LLM to perform a deeper level of analysis. Instead of just "flagging trends," the model must now synthesize the data to determine why a trend is a risk and what the team should do about it. This aligns with the "Advanced Prompting" section of the CT-GenAI syllabus, which emphasizes using AI for decision support. A structured report that includes a "timeline for intervention" allows the human tester to quickly validate the AI's logic and make informed decisions, transforming the LLM from a simple data summarizer into a strategic predictive tool that actively supports the maintenance of release quality and schedule adherence.

NEW QUESTION # 13

When an organization uses an AI chatbot for testing, what is the PRIMARY LLMOps concern?

- A. Focusing primarily on user experience improvements and response formatting
- B. Achieving faster responses by reducing model checkpoints and updates
- C. Maintaining data privacy and minimizing security risks from external services
- D. Maximizing scalability by deploying larger cloud-based LLM clusters

Answer: C

Explanation:

LLMOps (Large Language Model Operations) is the set of practices used to manage the lifecycle of LLMs in production. When an organization integrates an AI chatbot into its test processes, the primary operational concern is maintaining data privacy and minimizing security risks, especially if using third-party APIs.

Unlike traditional software, LLMs are "black boxes" that process every piece of data sent to them. A core LLMOps responsibility is ensuring that any "Prompt Data" (code, requirements, or logs) is not used by the provider to train their public models and that the communication channels are fully secured. While scalability (Option A) and latency (Option C) are important technical metrics, they are secondary to the catastrophic legal and reputational risk of a data breach. LLMOps in a testing context involves implementing data masking tools, monitoring for "Prompt Injection" attacks, and managing the "Grounding" data in vector databases to ensure it remains current and protected. This ensures the AI remains a safe and reliable asset within the enterprise testing ecosystem, rather than a liability for the organization's intellectual property.

NEW QUESTION # 14

What distinguishes an LLM-powered agent from a basic AI chatbot in test processes?

- A. Ability to trigger automated actions beyond conversation
- B. Use of a conversational tone and improved response personalization
- C. Ability to respond to prompts without explicit user instructions
- D. Reliance on predefined templates to generate short, factual answers

Answer: A
