CertNexus CFR-410: CyberSec First Responder is a certification exam that focuses on validating the skills and knowledge of professionals who deal with cyber security incidents. CyberSec First Responder certification is designed to help individuals who work in the field of information technology to identify, analyze, and respond to cyber security incidents. It is an entry-level certification that assesses the ability of candidates to handle a variety of security incidents.

## CertNexus CyberSec First Responder Sample Questions (Q32-Q37):

### NEW QUESTION # 32

An incident responder was asked to analyze malicious traffic. Which of the following tools would be BEST for this?

- A. tcpdump
- B. Wireshark
- C. Hex editor
- D. Snort

**Answer: B**

### NEW QUESTION # 33

Which of the following represents a front-end security capability that addresses cyber resiliency?

- A. Multi-factor authentication
- B. Key management
- C. Physical separation of backups
- D. Immutability of backups

**Answer: A**

Explanation:

Multi-factor authentication (MFA) is a front-end security capability that enhances cyber resiliency by requiring users to provide multiple forms of verification before gaining access to systems or applications. This helps protect against unauthorized access, which is a key component of maintaining resilience in the face of cyber threats.

#### NEW QUESTION # 34

Which of the following is a social engineering tactic in which an attacker engages in temptation or promise of a good or service?

- A. Vishing
- B. Baiting
- C. Phishing
- D. Pretexting

**Answer: B**

Explanation:

Baiting is a social engineering tactic in which an attacker entices the target with the promise of something desirable, such as free software or a service, in order to lure them into taking an action that compromises their security, such as downloading malicious software or providing sensitive information.

#### NEW QUESTION # 35

What is the primary role of an intrusion detection system (IDS) on a network?

- A. Blocking malicious packets
- B. Detection of network vulnerabilities
- C. Detection of system failures
- D. Detection of possible threats

**Answer: D**

Explanation:

The primary role of an Intrusion Detection System (IDS) is to detect potential threats or suspicious activities on a network. It monitors network traffic and system activities, identifying possible attacks or breaches, and alerts administrators without actively blocking malicious traffic.

#### NEW QUESTION # 36

Which of the following are well-known methods that are used to protect evidence during the forensics process? (Choose three.)

- A. Lock box
- B. Evidence bags
- C. Caution tape
- D. Security envelope
- E. Faraday boxes
- F. Secure rooms

**Answer: B,C,D**

#### NEW QUESTION # 37
