Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q320-Q325):

NEW QUESTION # 320
A company is running a Docker application on Amazon ECS. The application must scale based on user load in the last 15 seconds. How should a Developer instrument the code so that the requirement can be met?

- A. Create a standard-resolution custom Amazon CloudWatch metric for user activity data, then publish data every 30 seconds
- B. Create a standard-resolution custom Amazon CloudWatch metric for user activity data, then publish data every 5 seconds
- C. Create a high-resolution custom Amazon CloudWatch metric for user activity data, then publish data every 5 seconds
- D. Create a high-resolution custom Amazon CloudWatch metric for user activity data, then publish data every 30 seconds

Answer: C

Explanation:
https://docs.aws.amazon.com/AmazonCloudWatch/latest/monitoring/publishingMetrics.html#high-resolution-metrics

NEW QUESTION # 321
A Lambda function processes data before sending it to a downstream service Each piece of data is approximately 1 MB in size After a security audit, the function t]is now required to encrypt the data before sending it downstream Which API call is required to perform the encryption?

- A. Pass the data to the KMS ReEncrypi API for encryption
- B. Use the KMS GenerateDataKey API to get an encryption key
- C. Use the KMS GenerateDataKeyWithoutPlain.Text API to get an encryption key
- D. Pass the data to KMS as part of the Encrypt API for encryption

Answer: B

NEW QUESTION # 322
A company recently migrated its web, application and NoSQL database tiers to AWS. The company is using Auto Scaling to scale the web and application tiers. More than 95 percent of the Amazon DynamoDB requests are repeated read-requests.
How can the DynamoDB NoSQL tier be scaled up to cache these repeated requests?

- A. Amazon CloudFront
- B. Amazon EMR
- C. Amazon DynamoDB Accelerator
- D. Amazon SQS

Answer: C

NEW QUESTION # 323

Given the following AWS CloudFormation template:

What is the MOST efficient way to reference the new Amazon S3 bucket from another AWS CloudFormation template?

- A. Add an Export declaration to the outputs section of the original template and use ImportValue in other templates.
- B. Use Fn: : Include to include the existing template in other template and use the ContentBucket resource directly
- C. Create a custom AWS CloudFormation resource that gets the bucket name from the ContentBucket resource of the first stack.
- D. Add Exported: True to the ContentBucket in the original template and use ImportResource in other templates.

Answer: A

NEW QUESTION # 324

A company maintains a REST service using Amazon API Gateway and the API Gateway native API key validation. The company recently launched a new registration page, which allows users to sign up for the service. The registration page creates a new API key using CreateApiKey and sends the new key to the user.

When the user attempts to call the API using this key, the user receives a 403 Forbidden error. Existing users are unaffected and can still call the API.

What code updates will grant these new users access to the API?

- A. The updateAuthorizer method must be called to update the API's authorizer to include the newly created API key.
- B. The importApiKeys method must be called to import all newly created API keys into the current stage of the API.
- C. The createUsagePlanKey method must be called to associate the newly created API key with the correct usage plan.
- D. The createDeployment method must be called so the API can be redeployed to include the newly created API key.

Answer: B

NEW QUESTION # 325

......
