VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 2	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.
Topic 3	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 4	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.

First-Grade 2V0-17.25 VCE Dumps & Latest Valid 2V0-17.25 Test Notes Ensure You a High Passing Rate

In our lives, we will encounter many choices. Some choices are so important that you cannot treat them casually. The more good choice you choose in your life, the more successful you are. Perhaps our 2V0-17.25 exam guide can be your correct choice. Our study guide is different from common test engine. Also, the money you have paid for our 2V0-17.25 Study Guide will not be wasted. We sincerely hope that our test engine can teach you something. Of course, you are bound to benefit from your study of our 2V0-17.25 practice material.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q110-Q115):

NEW QUESTION # 110
When considering standardization in VMware environments, which of the following are aligned with industry or regulatory best practices?

- A. CO2 emission compliance
- B. Regular audits and patching guided by ITIL processes
- C. Hardening guides that align with NIST standards
- D. Role-based access control following ISO 27001 principles

Answer: B,C,D

Explanation:
NIST-based hardening guides, ISO 27001-aligned RBAC, and ITIL-driven audits and patching all intersect with VMware security and operational best practices. CO2 emissions (C) are environmental considerations, not typically covered under VMware's security/operational standards.

NEW QUESTION # 111
An administrator is responsible for the management of a VMware Cloud Foundation (VCF) environment that consists of two VCF Automation tenants, Production and Development.
The administrator has been tasked with the following:
- Configure a new project within the Development tenant to support the
creation of a new Kubernetes-based application.
- Ensure that, as the development team onboards new members, the
ongoing management overhead of the project membership is minimized.
Which four of the following steps should the administrator take to meet the objective? (Choose four.)

- A. Assign at least one Cloud Zone to the Project.
- B. Assign at least one Namespace to the Project.
- C. Log in to the Development tenant as an Organization Administrator.
- D. Create a new Project.
- E. Assign both Project Administrators and Project Members to the Project using Active Directory Users.
- F. Log in to the Development tenant as a Project Administrator.
- G. Assign both Project Administrators and Project Members to the Project using Active Directory Groups.

Answer: B,C,D,G

Explanation:
The administrator must log in as an Organization Administrator to create and manage projects within the Development tenant. A new project must be created to support the Kubernetes-based application. At least one namespace must be assigned to the project to enable Kubernetes deployments. To minimize ongoing membership management overhead as team members change, project roles should be assigned using Active Directory groups rather than individual users.

NEW QUESTION # 112
An administrator has been tasked with configuring Single Sign-On (SSO) to a VMware Cloud Foundation (VCF) instance to provide Role-Based Access Control for a team of cloud administrators.
Once the initial configuration of VCF SSO has been completed, which three components must the administrator assign service roles in order to allow elevated access to the VCF management components? (Choose three.)

- A. VCG Installer
- B. VMware vCenter
- C. VMware NSX Manager
- D. VMware vSAN
- E. VCF Operations
- F. VMware ESX

Answer: B,C,E

Explanation:
After VCF Single Sign-On is configured, elevated administrative access is granted by assigning service roles on the core management components that enforce RBAC. VMware NSX Manager requires role assignments to manage networking and security services, VMware vCenter requires role assignments for compute and cluster administration, and VCF Operations requires service roles to access and manage monitoring, analytics, and lifecycle-related operational capabilities across the VCF instance.

NEW QUESTION # 113
Which three tools could identify and assist with troubleshooting a misconfigured vSAN network?
(Choose three.)

- A. esxcli
- B. vmkping
- C. Supportability and Serviceability (SoS)
- D. Ruby vSphere Console (RVC) commands
- E. Direct Console User Interface (DCUI)
- F. vCheck

Answer: A,B,D

Explanation:
esxcli commands (for example, esxcli network vsan cluster get) can validate and configure vSAN network settings.
vmkping allows you to test VMkernel adapter connectivity on the vSAN network to confirm reachability and MTU correctness.
RVC provides specialized vSAN commands (such as vsan.network_info and health check commands) tailored for diagnosing vSAN network misconfigurations.

NEW QUESTION # 114
An administrator is tasked with creating a workload domain using Fibre Channel as the principal storage type.
Which of the following prerequisites must be verified and prepared before the workload domain creation process can start?

- A. Ensure the storage Logical Unit Number (LUNs) are presented to all ESX hosts.
- B. Ensure eligible and supported SSD disks are installed in all ESX hosts.
- C. Configure port binding on all ESX hosts.
- D. Configure a VMkernel interface for storage access to all ESX hosts.

Answer: A

Explanation:
When using Fibre Channel as the principal storage type, the required prerequisite is that the storage Logical Unit Numbers are properly presented and visible to all ESXi hosts so that VMware Cloud Foundation can detect, validate, and use the shared FC storage during workload domain creation.
